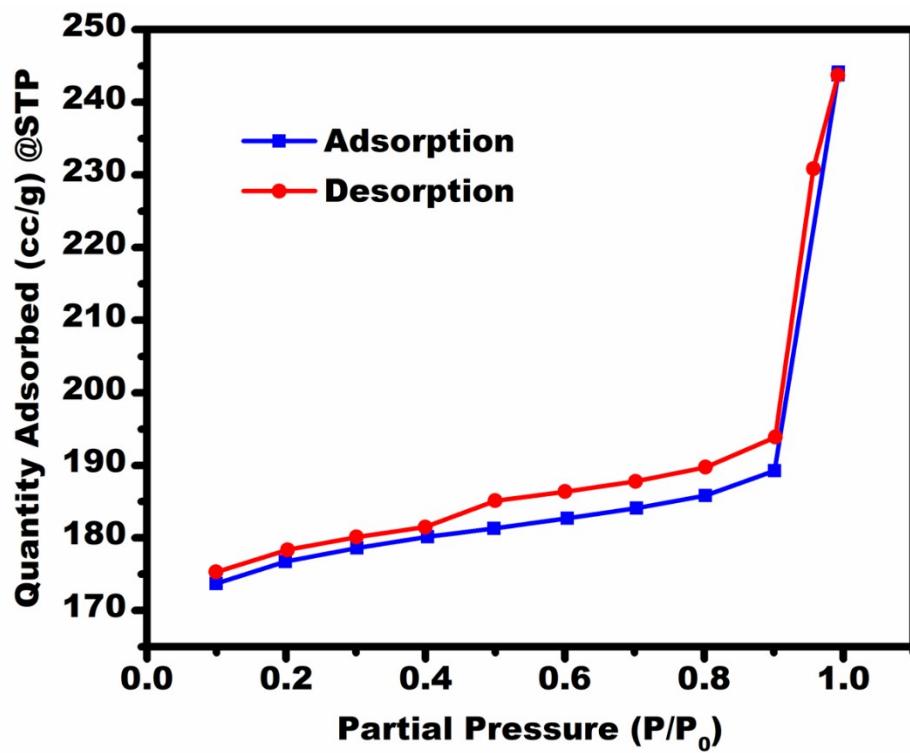

Fig S1. N₂ adsorption-desorption isotherm of Fe₃O₄/Si@MIL-125 (Ti), at 77 K under nitrogen atmosphere.

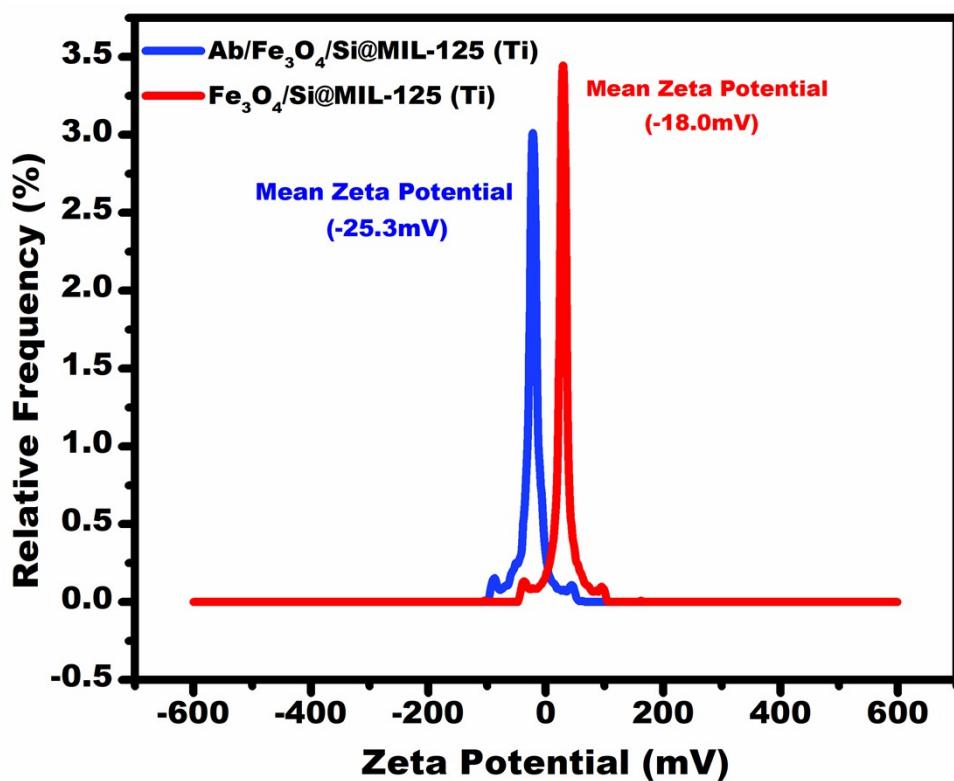

Fig S2. Zeta potential of Fe₃O₄/Si@MIL-125 (Ti) before and after antibody conjugation.

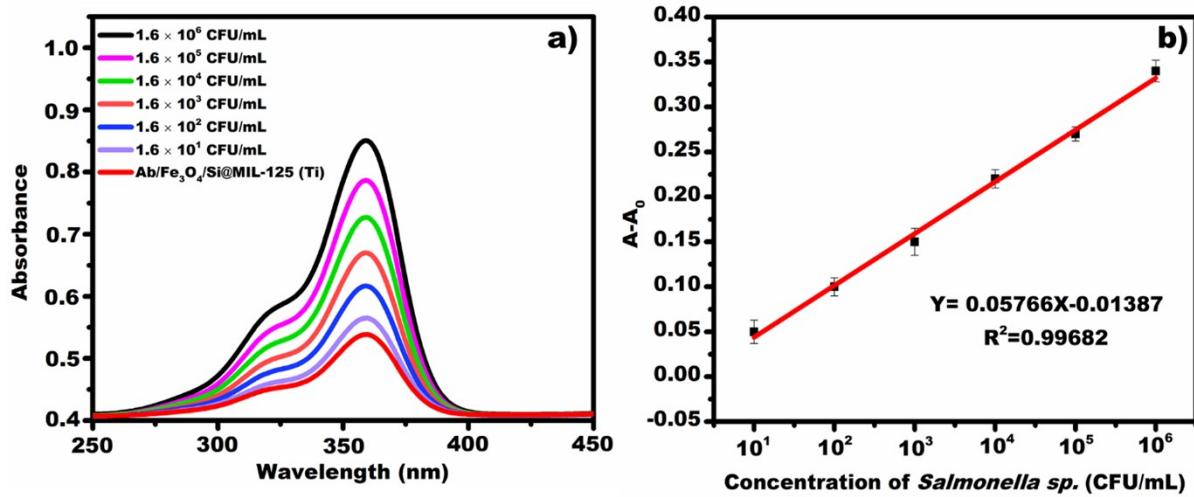

Fig S3. a) UV-Vis absorption spectra and b) corresponding calibration curve obtained at 355 nm when probe combined with different concentrations of *Salmonella* sp. where (A: absorbance value of the test sample; A_0 : absorbance value of Ab/Fe₃O₄/Si@MIL-125 (Ti) which served as negative control). The error bars indicate absolute errors deduced from three replicate measurements.

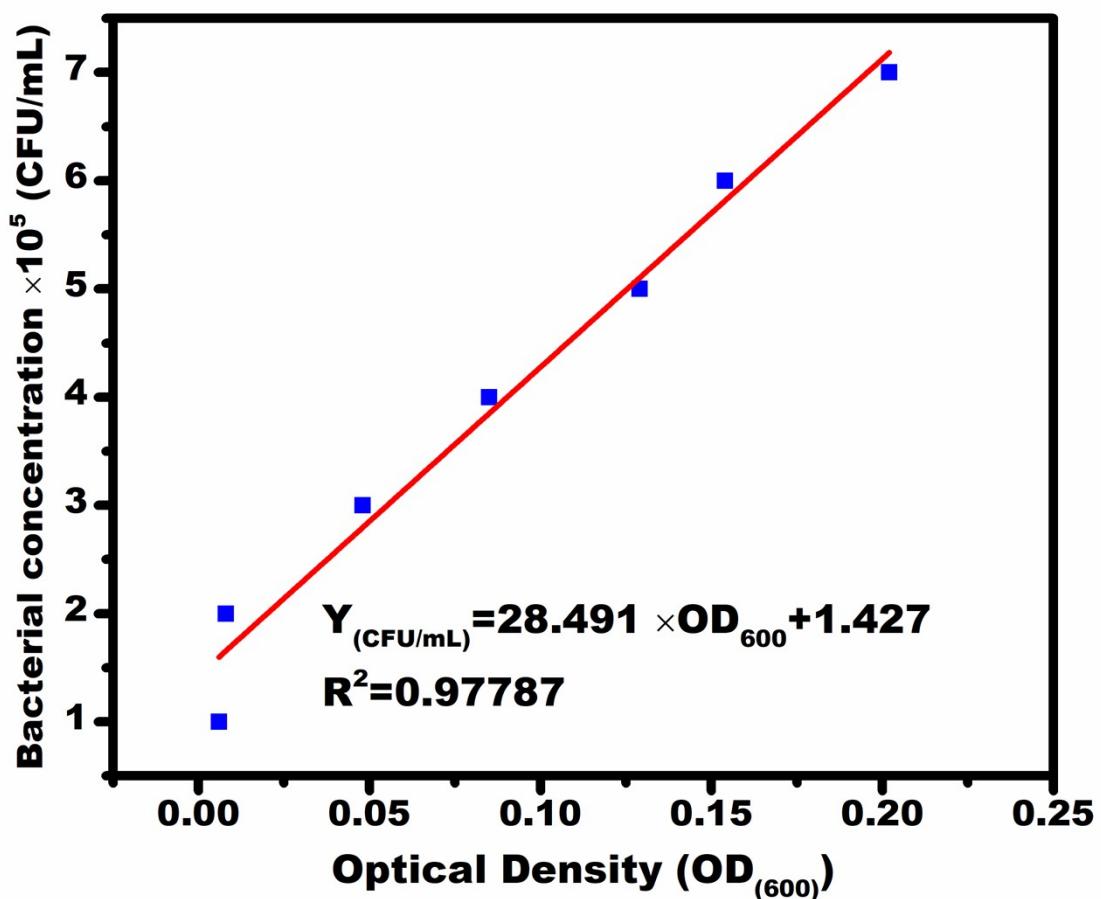

Fig S4. OD₆₀₀ versus CFU/mL plot of *Salmonella* sp.

Table S1. Results of the ANOVA test at a 5% significance level for sensor response measurements of Ab/Fe₃O₄/Si@MIL-125 (Ti) biosensors for 4 different conditions.
