42 *Chemicals and reagents*

43 Zinc nitrate hexahydrate ($\text{Zn}(\text{NO}_3)_2 \cdot 6\text{H}_2\text{O}$; 98.0%), chromium(III) nitrate nonahydrate
44 ($\text{Cr}(\text{NO}_3)_3 \cdot 9\text{H}_2\text{O}$; 99.0%), ammonium fluoride (NH_4F ; $\geq 99.99\%$), urea ($\text{CO}(\text{NH}_2)_2$; $\geq 99.5\%$),
45 Nickel (II) nitrate hexahydrate ($\text{Ni}(\text{NO}_3)_2 \cdot 6\text{H}_2\text{O}$, $\geq 97.0\%$), Cobalt (II) nitrate hexahydrate
46 ($\text{Ni}(\text{NO}_3)_2 \cdot 6\text{H}_2\text{O}$; $\geq 98.0\%$), glycerol ($\text{C}_3\text{H}_8\text{O}_3$; $\geq 99.0\%$), isopropanol ($\text{C}_3\text{H}_8\text{O}$; anhydrous; 99.5%),
47 thioacetamide ($\text{C}_2\text{H}_5\text{NS}$; 98.0%), Ronidazole ($\text{C}_6\text{H}_8\text{N}_4\text{O}_4$; $\geq 95.0\%$), sodium phosphate dibasic
48 anhydrous (NaH_2PO_4 , $\geq 99.0\%$), sodium phosphate monobasic dihydrate ($\text{NaH}_2\text{PO}_4 \cdot 2\text{H}_2\text{O}$,
49 $\leq 100\%$) were purchased from Sigma- Aldrich (Taiwan). Sodium hydroxide (NaOH , $\geq 98\%$),
50 potassium chloride (KCl , $\leq 100\%$) hydrochloric acid (HCl , $\geq 37\%$) were purchased from
51 Honeywell Fluka (Taiwan). Potassium ferricyanide ($\text{K}_3\text{Fe}(\text{CN})_6$, $> 98\%$) and potassium
52 ferrocyanide ($\text{K}_4\text{Fe}(\text{CN})_6 \cdot 3\text{H}_2\text{O}$, $> 99\%$) from Duksan (Taiwan). Alumina powder ($0.05\mu\text{m}$) and
53 ethanol ($\text{C}_2\text{H}_5\text{OH}$, 95%) were bought from Struers (Taiwan) and Taiwan Sugar Corporation. De-
54 ionized water (DI) was used for preparation and washings. All the chemicals were analytical grade
55 and used without further purification.

56 *Instrumentation*

57 X-ray diffraction analysis (XRD) was done with an X-ray diffractometer (PANalytical
58 B.V.) using the monochromatic $\text{Cu-K}\alpha$ line with a PIXcel3D detector. Fourier-transform infrared
59 (FT-IR) spectroscopy was performed using a JASCO FT/IR-6600 spectrophotometer.
60 Transmission electron microscope (TEM) images were obtained from a JEOL-JEM-2100F
61 equipped with selected area electron diffraction (SAED), energy-dispersive X-ray (EDX)
62 spectrometer, and elemental mapping. High-resolution X-ray photoelectron spectroscopy (HR-
63 XPS) was conducted with Thermo ESCALAB 250. Electrochemical Impedance Spectroscopy
64 (EIS) was performed with Admiral Instruments Squidstat Plus Potentiostat (1709 CH1).

65 **Electrochemical cell setup**

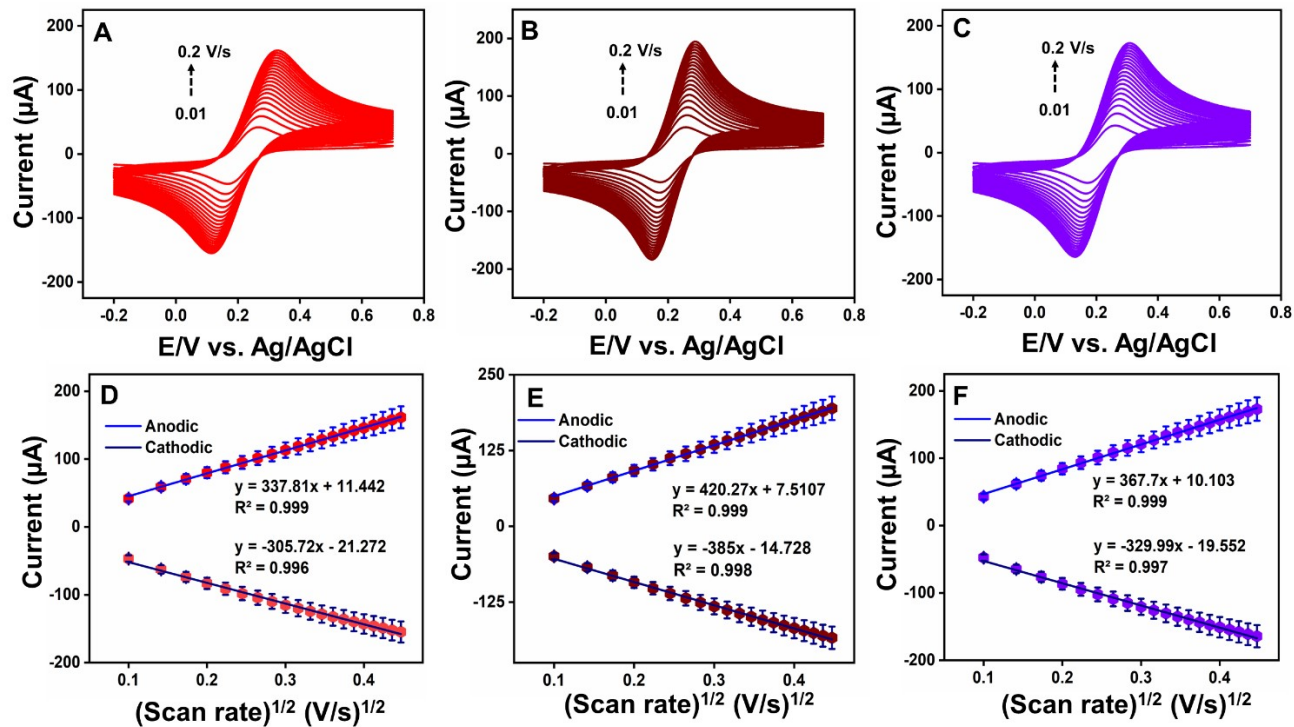

66 In the three-electrode electrochemical cell setup, a Glassy carbon electrode (GCE),
67 Ag/AgCl (saturated KCl) electrode, and platinum wire were taken as working, reference, and an
68 auxiliary electrode. Cyclic voltammetry (CV) and Difference Pulse Voltammetry (DPV)
69 measurements were carried out with CH Instrument electrochemical workstation CHI 611A and
70 CHI 900. 0.1 M phosphate buffer (PB) solution was chosen as the working electrolyte in all
71 experiments.

80

81 **Fig. S4** DPV response of (A) multiple interfering compounds (*inset*: at high magnification), (B)
 82 its bar graph diagram, and (C) relative error bar diagram (*inset*: at high magnification) at
 83 ZC/NCS/GCE.

84

85 **Fig. S5** Electroanalytical performance results (A) Repeatability, (B) Reproducibility, and (C)
 86 Stability tests of ZC/NCS/GCE.

87

88 **Fig. S6** Real sample analysis of ZC/NCS/GCE on (A) River water, (B) Chicken meat extract and
 89 (C) Human urine.

90 **Table S1** Electrochemical detection of RZ in Real samples (n=3).

Real samples	Added (μM)	Found (μM)	Recovery (%)	Mean \pm RSD
River water	2.1	2.096	98.6	98.4 \pm 0.119
	18.1	18.098	99.6	99.4 \pm 0.003
	38.1	38.096	99.5	99.5 \pm 0.006
	39.1	39.098	99.8	99.6 \pm 0.006
	42.1	42.099	99.9	99.8 \pm 0.001
Chicken	2.1	2.105	101.8	100.4 \pm 0.013
	18.1	18.099	99.8	99.6 \pm 0.002
	38.1	38.094	99.2	99.4 \pm 0.002
	39.1	39.092	99.1	99.3 \pm 0.005
	42.1	42.097	99.7	99.8 \pm 0.002
Human urine	2.1	2.098	99.3	99.4 \pm 0.024
	18.1	18.097	99.4	102.3 \pm 0.047

Urine	38.1	38.096	99.6	100.6±0.018
	39.1	39.09	98.9	97.8±0.029
	42.1	42.099	99.9	99.3±0.009
