

Supplementary information :

Fig.S1 Evaluation of the indicators in rats during CNAG modeling. (A) Body weight change in rats. (B) Serum G-17 and PGI levels of rats in the model group at week 8. (C) Morphological and histopathological changes of rat gastric tissue during modeling (green arrows indicate gastric mucosa exudation and detachment, black arrows indicate congestion and edema). Data is expressed as means \pm SD (n=8). * $P < 0.05$, ** $P < 0.01$ vs. NC group.
