Figure Caption

Figure S1. Supplementary information for animal and cell experiments. (A) Body weight and (B) food intake were recorded every one and two weeks, respectively. (C) Cell viability assay determining cell survival rate in the presence of DMSO and a series of doses of CAD. The data were presented as means \pm SD. *, $P < 0.05$ vs. Ctrl. Abbreviations: AS, atherosclerosis; CAD, cardamonin; Ctrl, control; Veh, the vehicle sodium carboxymethyl cellulose.
