a. SD: standard deviation

b. Children with scores lower than the 25th percentile were considered potentially delayed in that domain. Otherwise, they were normal.

\*: p < 0.05.

a. The model was adjusted for maternal age, prenatal BMI, maternal education level, per capita monthly household income, parity, mode of delivery, gestational age, GDM, child's sex, birthweight, and breastfeeding pattern.

b. CI: confidence interval.

c. Ref: reference; The fatty acids in the table were divided into T1, T2 and T3 groups according to content, with the lowest content group as reference.

a. The model was adjusted for nothing.

b. OR: odds ratio; CI: confidence interval.

c. Ref: reference; The fatty acids in the table were divided into T1, T2 and T3 groups according to content, with the lowest content group as reference.

Children with scores lower than the 25th percentile were considered potentially delayed in that domain. Otherwise, they were normal. The cut off values of communication, gross motor, fine motor, problem solving and personal-social were 50.00, 53.75, 48.75, 40.00, 35.00, respectively.
