

1. The raw picture of Western blots in Figure 6C.

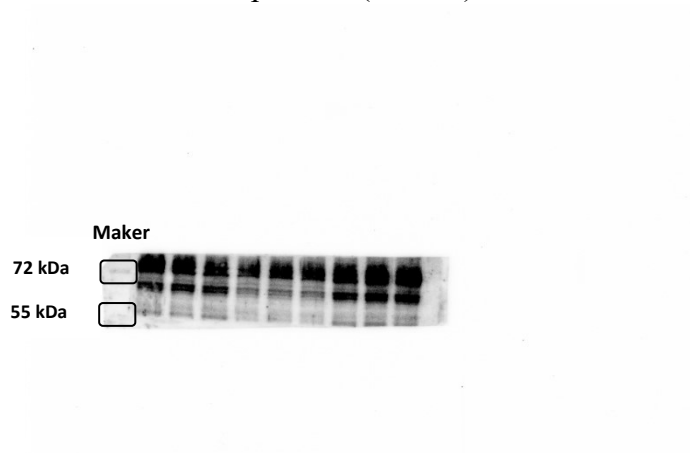

GAPDH

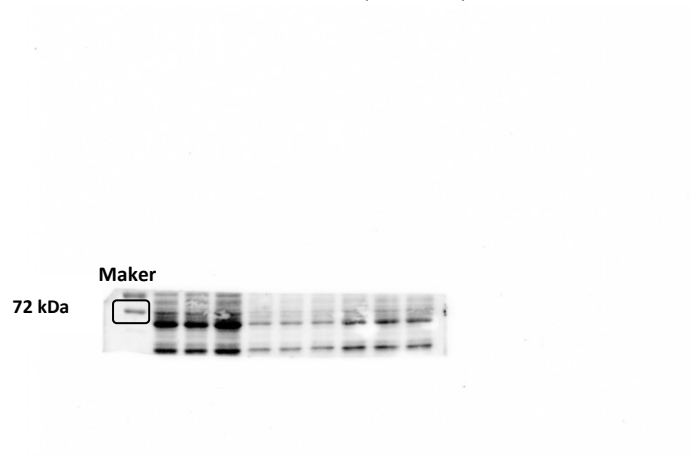

PPAR α

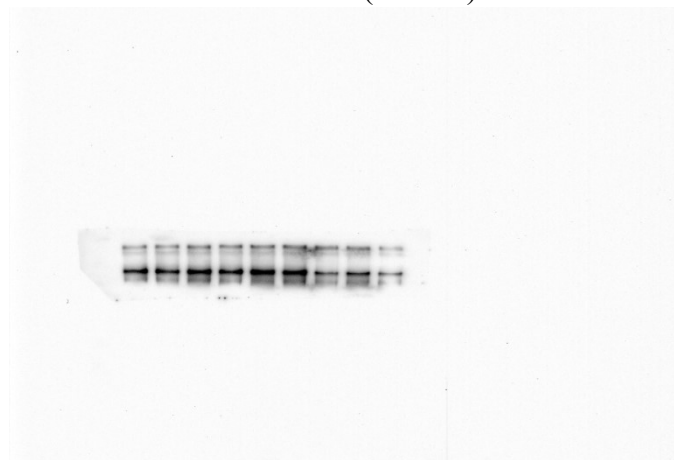

pAMPK(63 kDa)

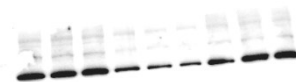

AMPK (63 kDa)

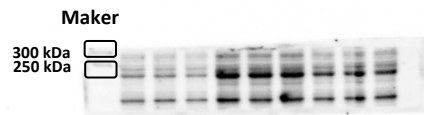

SREBP-1c (65 kDa)

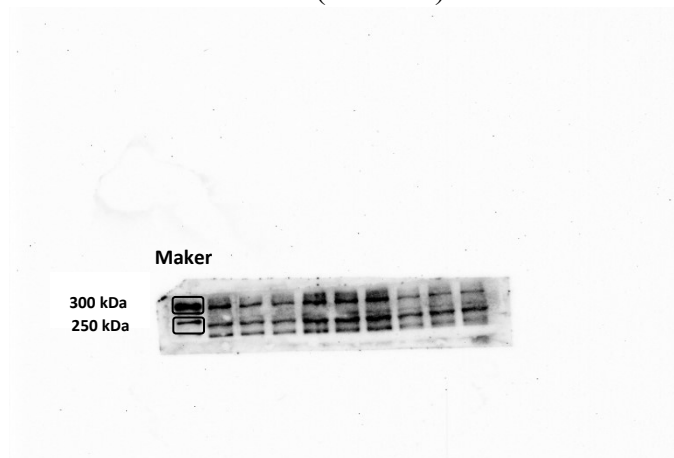

HSL (92 kDa)

ACC (265 kDa)

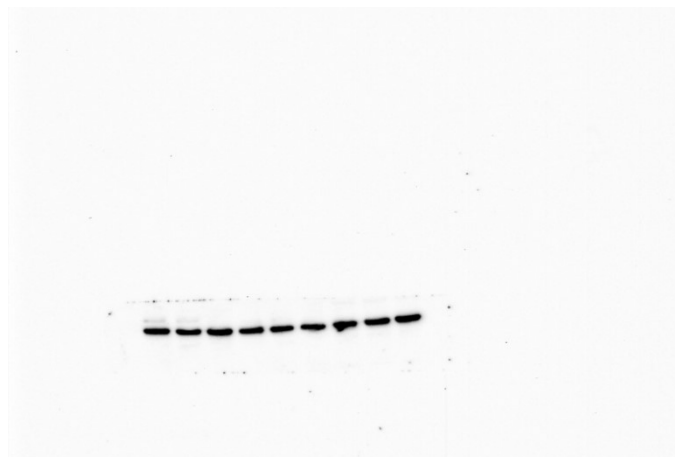

FAS (273 kDa)

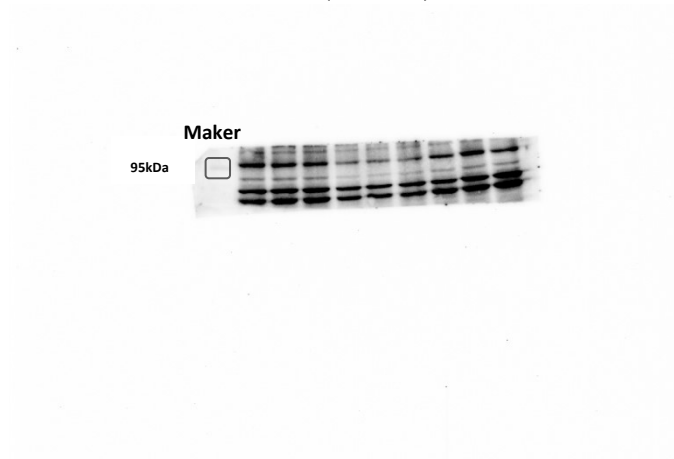

2. The raw picture of Western blots in Figure 9D.

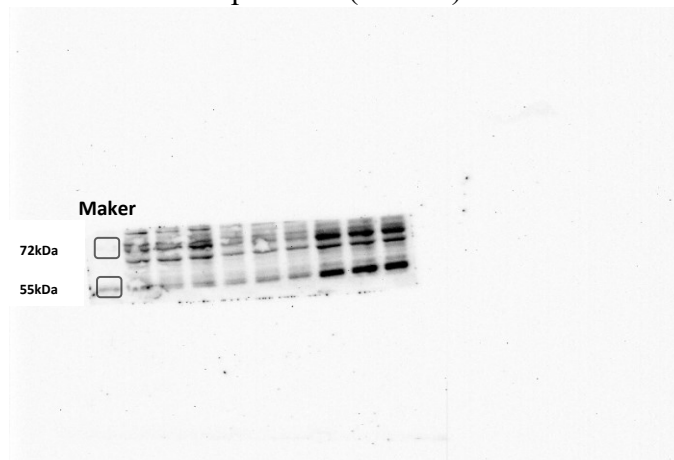

GAPDH

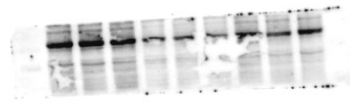

HSL(92 kDa)

pAMPK (63 kDa)

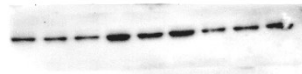

PPAR α (55 kDa)

ACC

FAS

Some of the raw picture of Western blots we provided contained multiple bands, which may be caused by poor specificity of primary antibody. Therefore, the corresponding bands of the measured proteins were selected according to the Marker and the molecular weight of the measured proteins.
