Chemical Synthesis

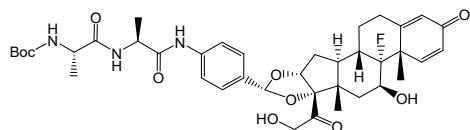

All the reagents and solvents were purchased from TCI China, Accela ChemBio, Bide Pharmatech Ltd and Sigma Aldrich and used without further purification. ^1H NMR spectra were recorded on a Bruker AVANCE III 400MHz spectrometer. The data were processed with MestReNova software, measuring proton shifts in parts per million (ppm) downfield from an internal standard tetramethyl silane. Whenever possible, reactions were monitored by LCMS. Linker payloads were synthesized according to procedures described in the Supporting Information (S2). All purified compounds were $\geq 95\%$ purity based on analytical HPLC. HPLC conditions are detailed in Table S1 in the Supporting Information. Compound names were generated in ChemDraw 20.1 and properties (cLogP, cLogD, PSA and pI) calculated in ChemDraw 20.1 or in-house proprietary software. The mouse anti-TNF antibody is IgG2a.

Synthesis of Antibody-Drug Conjugates

DAR4 ADC Preparation

Mouse anti-TNF antibody 8C11 in PBS containing 5 mM of EDTA (10.6 mg/mL) was treated with DPhPEA (2.7 equivalents) at 4 °C overnight. To the reduced mAb was added the linker drugs (10 equivalents /antibody) in DMSO followed by addition of 1 M Tris buffer (pH 8.5) to a final concentration of 50 mM. The mixture was gently rocked at RT for 4 h before buffer exchange to 15 mM histidine buffer (pH 6.0) by elution through Sephadex G25 column. The ADC was sterile filtered through a 0.2 μ m filter and stored at -78 °C before analysis and *in vitro* test.

DAR10 ADC Preparation

Mouse anti-TNF antibody 8C11 in PBS containing 5 mM of EDTA (10.6 mg/mL) was treated with TCEP (5.75 equivalents) at 4 °C overnight. To the reduced mAb was added the drug linker (18-60 equivalents /antibody) in DMSO followed by addition of 1 M Tris buffer (pH 8.5) to a final concentration of 50 mM. The mixture was left at 4 °C for conjugation overnight before buffer exchange to 15 mM histidine buffer (pH 6.0) by elution through Sephadex G25 column. The ADC was sterile filtered through a 0.2 μ m filter and stored at -78 °C before analysis and *in vitro* test.

HPLC Analysis of ADCs

Hydrophobic Interaction Chromatography (HIC)

Approximately 25 ug of the ADC was loaded onto an Ultimate 3000 Dual LC system equipped with a TSK-GEL Butyl-NPR column (4.6 mm x 3.5 cm, Tosoh Bioscience, cat. 14947). The column was equilibrated with 100% buffer A followed by a 10 min linear gradient to 100% buffer B at a flow rate of 0.8 mL/min, where buffer A was 1.5 M ammonium sulfate, 25 mM potassium phosphate, pH 7.0; and buffer B was 20 mM potassium phosphate with 20% isopropanol, pH 7.0.

Size Exclusion Chromatography (SEC)

Approximately 15 ug of the ADC was loaded onto an Ultimate 3000 Dual LC system equipped with a TSK-gel 3000 SWXL column (7.8 mm x 30 cm, Tosoh Bioscience, cat. 08541). The column was eluted with an isocratic gradient of 100 mM sodium phosphate, 100 mM sodium sulfate, pH 6.8 for 17 min at a flow rate of 1.0 mL/min.

DAR LCMS Analysis

ADC samples were reduced with 5 mM TCEP at rt for 30 min. Approximately 50 ng of reduced ADC was injected onto an Agilent 1290 Infinity II UHPLC equipped with an Agilent PLRP-S column (4000 Å, 8 μ m, 2.1 x 50 mm) and coupled to an Agilent 6545XT QTOF MS system. The gradient was 10% B for 0.5 min, 10-90% B in 0.1 min and held at 90% B for 1.1 min, 90-10% B in 0.1 min, and then held at 10% B for 0.2 min. The mobile phases were A: 0.1% formic acid in water and B: 0.1% formic acid in MeCN. The flow rate was 0.6 mL/min, and the column compartment was maintained at 60 °C. Agilent DAR Calculator was used to calculate DAR of the ADC samples.

GRE Luciferase Reporter Assay

The HEK-293 GRE luciferase reporter cell line 293/GR-luc was purchased from Panomics (#RC0018). Cells were cultured in DMEM medium supplemented with 10% FBS, 1% Penicillin-Streptomycin and 100 μ g/mL Hygromycin B at 37 °C and 5% CO₂ according to the manufacturer's instructions. The cells were seeded at 4 x 10⁴ cells/well into a 96-well cell assay plate (Corning, #3842) in complete cell culture medium at 37 °C and 5% CO₂ overnight. After cell culture medium was removed, cells were incubated with various concentrations of the test compound in DMEM medium supplemented with 2% FBS, and 1% Penicillin-Streptomycin for overnight. On the following day, after the supernatants were removed, GRE luciferase reporter activity was measured according to the manufacturer's instructions using a SteadylitePlus (PerkinElmer, #6066751) prior to being read on an Envision (PerkinElmer, serial

#1040867). The full response for stimulation of HEK293 GRE reporter gene was determined by 10 μ M of prednisolone. The dose response data were fitted to a sigmoidal curve using nonlinear regression, and the EC₅₀ values calculated with the aid of GraphPad 5.0 (GraphPad Software, Inc.).
