Supplementary materials

**Fig. S1.** Tauc plots based on the data in Fig. 2b for ZnO and Cu:ZnO NPs to determine their band gap.
Fig. S2. Antibacterial activity of RBS against *S. aureus* (a) and *E. coli* (b), and RBS@ZnO NPs against *S. aureus* (c) and *E. coli* (d) under 543 nm laser irradiation for 10 min at varied power outputs. The data are presented as average ± standard deviation (n = 3). Statistical significance: *P* < 0.05, **P** < 0.01.
**Fig. S3.** (a) SEM images of untreated *S. aureus* (left) and *S. aureus* treated with RBS@Cu:ZnO NPs under 543 nm laser irradiation (2 W, 10 min) (right); (b) SEM images of untreated *E. coli* (left) and *E. coli* treated with RBS@Cu:ZnO NPs under 543 nm laser irradiation (2 W, 10 min) (right).
