**Fig. S2.** The FTIR spectroscopy of CIS and OCIS.

**Fig. S3.** LSV curves of CIS-Ar, CIS and OCIS.

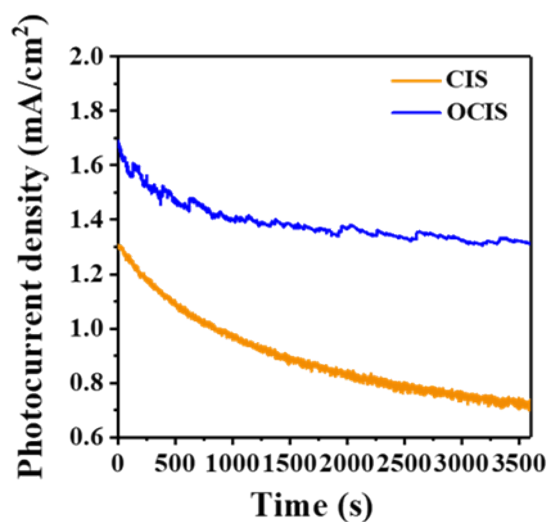

**Fig. S4.** Quantities of H<sub>2</sub> and O<sub>2</sub> evolution over OCIS catalyst.

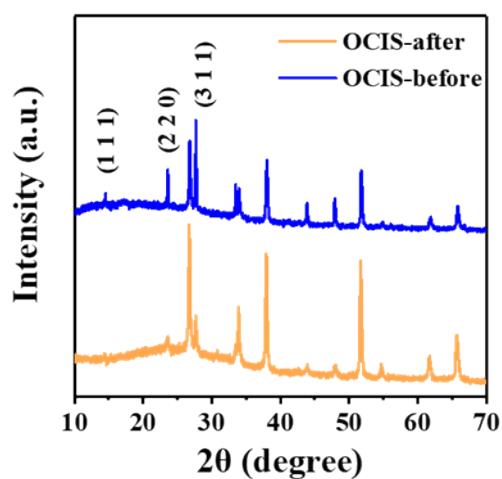

**Fig. S5.** Faradaic efficiencies of the O<sub>2</sub> production of OCIS.

**Fig. S6.** Gas chromatogram of H<sub>2</sub> and O<sub>2</sub> under sacrificial agent.

**Fig. S7.** Chronoamperometry tests of CIS and OCIS in the mixture of 0.25 M Na<sub>2</sub>S and 0.35 M Na<sub>2</sub>SO<sub>3</sub>.

**Fig. S8.** XRD spectra of OCIS before and after chronoamperometry test.

**Fig. S9.** The SEM images of OCIS (a) before, (b) after chronoamperometry test.

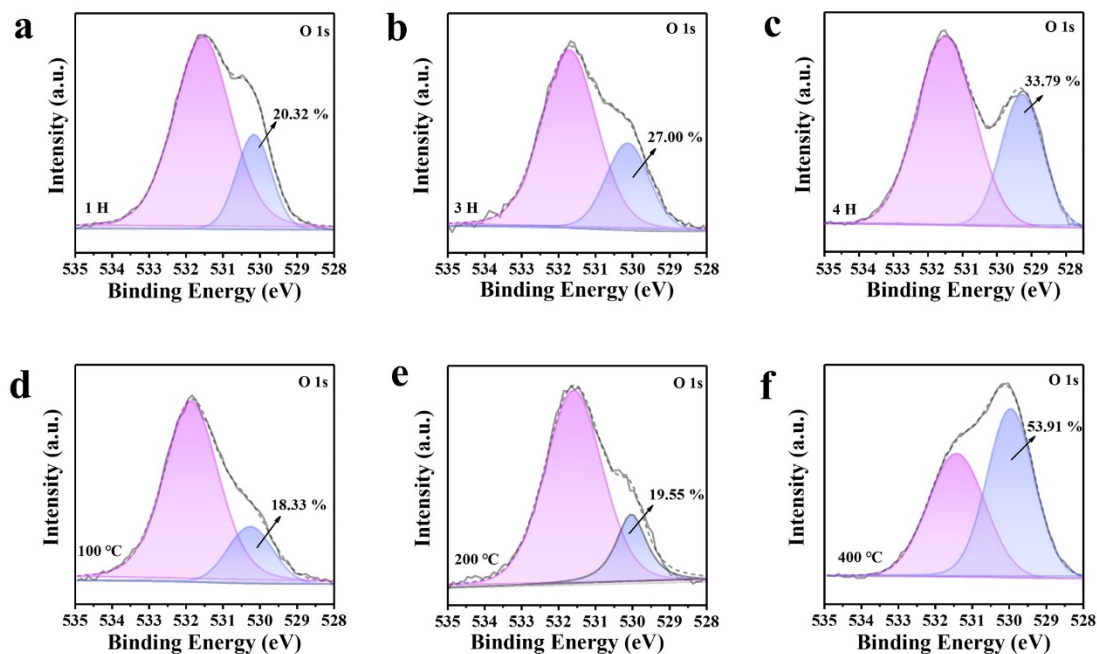

**Fig. S10.** XRD patterns of CIS annealed at 300 °C for different time.

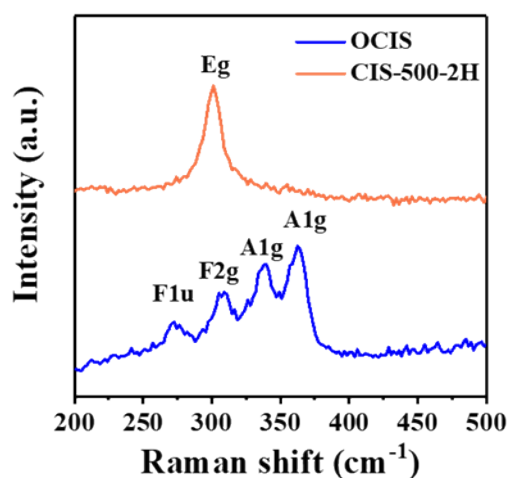

**Fig. S11.** XRD patterns of CIS annealed at 2 h for different temperatures.

**Fig. S12.** The high-resolution XPS spectra of O1s in OCIS.

**Fig. S13.** The high-resolution XPS spectra of O 1s in CIS annealed at 300 °C for different time: (a) 1 h, (b) 3 h, (c) 4 h. XPS spectra of O 1s in CIS annealed for 2 h at different temperature (d) 100 °C, (e) 200 °C, (f) 400 °C.

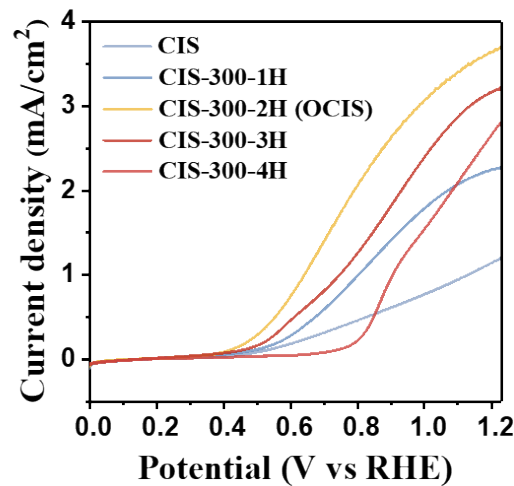

**Fig. S14.** Raman spectra of OCIS and CIS-500-2H.

Moreover, CIS-500-2H is further analyzed by Raman spectrum. In the range of 200-500  $\text{cm}^{-1}$ , there is an absence of any distinctive Raman peaks associated with CIS. The characteristic peak at 301  $\text{cm}^{-1}$  represents the stretching vibration of the Eg mode of  $\text{In}_2\text{O}_3$  (Fig. S14). This indicates that CIS has been completely oxidized at 500 °C, which is consistent with the XRD results.

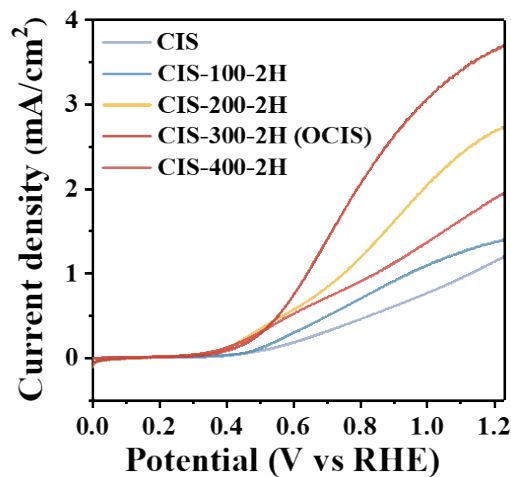

**Fig. S15.** The SEM images of (a) OCIS, (b) CIS-300-4H and (c) CIS-400-2H.

The morphological images of CIS-300-4H and CIS-400-2H are displayed in Fig. S15. In comparison with OCIS (Fig. S15a), even similar octahedral structure can be distinctly characterized, the homogeneity and crystallinity are more or less damaged along with the prolonged annealing time (Fig. S15b) or an increasing temperature (Fig. S15c). This phenomenon is unfavorable for the investigation of catalytic activity.

**Fig. S16.** LSV of CIS annealed at 300 °C for different time.

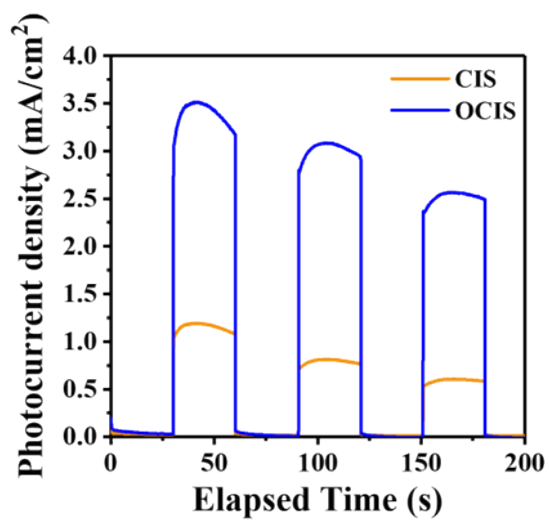

**Fig. S17.** LSV of CIS annealed for 2 h at different temperature.

**Fig. S18.** The APCE of CIS and OCIS photoanodes.
