1. General Information

Unless otherwise noted, all chemicals were purchased from commercial sources and used without further purification. Yields refer to chromatographically pure material. All solvents were used as purchased, without purification. MeCN were used as after drying and distillation. Reactions were monitored by thin-layer chromatography (TLC) performed on 0.25 mm Merck silica gel plates (60F-254) using UV light. Merck silica gel (mesh size 100-200) was used for flash column chromatography. NMR

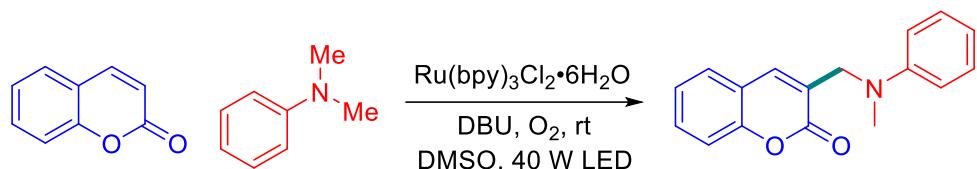

spectra were recorded on JEOL 500 (^1H : 500 MHz, ^{13}C : 125 MHz) or 400 (^1H : 400 MHz, ^{13}C : 100 MHz) spectrometer in CDCl_3 having TMS 0.03% as internal standard. Mass spectrometric data were obtained using WATERS-Q-TOF Premier-ESI-MS and GC-MS. The following abbreviations were used to explain the multiplicities: s = singlet, d = doublet, t = triplet, q = quartet, dd = doublet of doublet, ddd = doublet of a doublet of doublet, m = multiplet. Coumarin derivatives and dimethyl aniline derivatives were prepared according to the literature reports.

2. General Procedure

An oven dried vial equipped with a magnetic stir bar was charged with coumarin derivative (0.34 mmol), dimethyl aniline (4.0 equiv.), DBU (2 equiv.) and $\text{Ru(bpy)}_3\text{Cl}_2\cdot 6\text{H}_2\text{O}$ (2 mol%), followed by distilled dry DMSO (2 mL). After addition of solvent, reaction mixture was stirred under O_2 atmosphere (O_2 balloon) at rt under 40W LED illumination. After the completion of reaction (confirmed by TLC), reaction mixture was concentrated under reduced pressure. The residue was purified by flash column chromatography on silica gel (ethyl acetate/ petroleum ether).

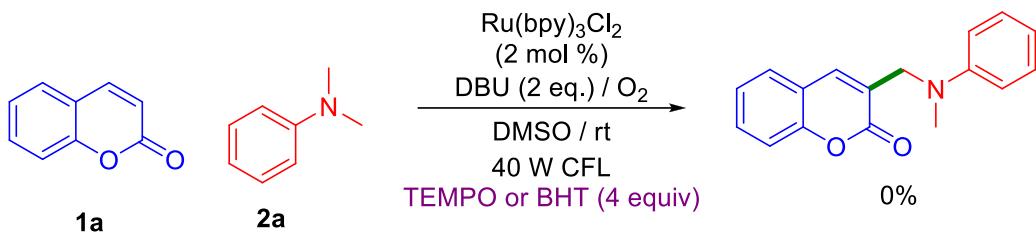

3. 1 mmol scale synthesis:

A dried 50 mL round bottom equipped with a magnetic stir bar was charged coumarin **1a** (1.03 mmol), *N,N*-dimethylaniline **2a** (4 equiv.), DBU (2 equiv.),

$\text{Ru}(\text{bpy})_3\text{Cl}_2 \cdot 6\text{H}_2\text{O}$ (2 mol%) and 6 mL dry DMSO. After addition of solvent, reaction mixture was stirred under O_2 atmosphere (O_2 balloon) at rt under 40W LED illumination. After the completion of reaction (confirmed by TLC), reaction mixture was concentrated under reduced pressure. The residue was purified by flash column chromatography on silica gel (ethyl acetate/ petroleum ether).

4. TEMPO & BHT Experiments:

An oven dried vial equipped with a magnetic stir bar was charged with coumarin **1a** (0.34 mmol), *N,N*-dimethylaniline **2a** (4.0 equiv.), DBU (2 equiv.) and $\text{Ru}(\text{bpy})_3\text{Cl}_2 \cdot 6\text{H}_2\text{O}$ (2 mol%), followed by distilled dry DMSO (2 mL) and TEMPO or BHT (4 equiv) was added. After the addition of solvent, reaction mixture was stirred under O_2 atmosphere (O_2 balloon) at rt under 40W CFL illumination. After 24 h, no product formation was observed.
