I. General Information

Unless otherwise stated, all glassware was oven-dried. All solvents were distilled from appropriate drying agents prior to use. All reagents were used as received from commercial suppliers unless otherwise indicated. Reactions were monitored using UV light as the visualizing agent. Flash column chromatography was performed using silica gel 60 (200-300 mesh). HRMS data were recorded on ThermoFisher LTQ Orbitrap XL or Agilent 6500QTOFMS-ESI. All ^1H NMR, ^{13}C NMR, and ^{19}F NMR spectra were recorded on Bruker DRX600 instruments. Chemical shifts were given in parts per million (ppm, δ), referenced to the solvent peak of CDCl_3 , defined at $\delta = 7.26$ (^1H NMR), defined at $\delta = 77.16$ (^{13}C NMR); or DMSO-d_6 , defined at 2.50 (^1H NMR), defined at $\delta = 39.52$ (^{13}C NMR). Coupling constants were quoted in Hz (J). ^1H NMR spectroscopy splitting patterns were designated as singlet (s), doublet (d), triplet (t), and quartet (q). Splitting patterns that could not be interpreted or easily visualized were designated as multiplet (m) or broad (br). In addition, SO_2ClF is a low-boiling, volatile chemical that needs to be used in fume hoods.

SO_2ClF was prepared according to the literature procedure.^{S1}

II. Preparation of the Starting Materials

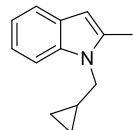

1-1e, 1g, 1i-1m, 26, 29, and 33 are received from commercial suppliers. **1f^{S2}** **1h^{S3}** **1n^{S4}** **1o^{S5}** **1p^{S6}** **1r^{S7}** **1s^{S8}** **1t^{S9}** **28^{S5}** and **31^{S10}** are known compounds and were synthesized according to the literature. **1q** is an unknown compound and was synthesized similarly to the reported procedure.^{S11}

Synthesis and Characterization of **1q**

According to the literature,^{S11} a 50 mL round-bottom flask was charged with 2-methyl-1*H*-indole (5 mmol), KOH (10 mmol), 20 mL of DMSO, and (bromomethyl)cyclopropane (10 mmol). The reaction mixture was stirred at room temperature and monitored by TLC. Upon completion, the reaction mixture was quenched with water (20 mL). The mixture was extracted with ethyl acetate (3×30 mL). The combined organic phases were dried over anhydrous Na₂SO₄. The product **1q** was purified by silica gel chromatography with petroleum ether/EtOAc.

III. General Procedure for Chlorination-Oxidation

To the solution of 2-methylindole (0.2 mmol, 1.0 eq) in acetone (5 mL, 0.04 M) and H₂O (3.6 μL, 1 eq) was added SO₂ClF (1 mmol, 5 eq, 1 M in anhydrous PhCF₃) dropwise, and then stirred at room temperature. After the completion of the reaction, as indicated by TLC, the reaction was quenched with water. The resulting mixture was extracted with ethyl acetate and the combined organic layers were dried over Na₂SO₄ and evaporated under reduced pressure. The residue was purified by column chromatography (petroleum ether/ethyl acetate = 20:1 to 4:1) on silica gel to afford the corresponding products.

V. Scale-Up Experiments

To the solution of **1** (3 mmol, 1.0 eq) in acetone (20 mL) and H₂O (54 µL, 1 eq) was added SO₂ClF (15 mmol, 5 eq, 1 M in anhydrous PhCF₃), and then stirred at room temperature. After the completion of the reaction, as indicated by TLC, the reaction was quenched with water. The resulting mixture was extracted with ethyl acetate and the combined organic layers were dried over Na₂SO₄ and evaporated under reduced pressure. The residue was purified by column chromatography (petroleum ether/ethyl acetate = 50:1 to 10:1) on silica gel to afford **2**.

VI. Synthetic Applications of 3-Chloro-2-Formylindoles

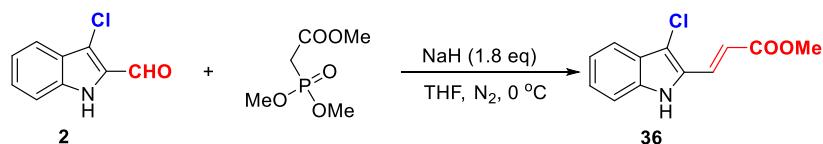

According to the literature,^{S16} to a solution of **2** (35.9 mg, 0.2 mmol, 1.0 eq) in anhydrous DMF (1.0 mL) was added sodium thiophenolate (58.7 mg, 0.4 mmol, 2.0 eq) in one portion at room temperature. The mixture was stirred under an N₂ atmosphere for 43 h and then a saturated aqueous solution of NH₄Cl (5.0 mL) was added. The mixture was extracted with EtOAc (10.0 mL) three times. The combined organic layers were dried over Na₂SO₄, filtered, and evaporated to dryness in vacuo. The residue was purified by column chromatography (petroleum ether/ethyl acetate = 50:1 to 10:1) on silica gel to afford **35** as a white solid (27.9 mg, 55% yield).

According to the literature,^{S17} to a solution of 60 % sodium hydride (144 mg, 0.36 mmol, 1.8 eq) in 2 mL anhydrous THF, a solution of methyl 2-(dimethoxyphosphoryl)acetate (39.6 µL, 0.24 mmol, 1.2 eq) in THF was added at 0 °C under nitrogen atmosphere. After 20 minutes, **2** (35.9 mg, 0.2 mmol, 1 eq) was added to the flask. After 14 h, the

reaction was hydrolyzed by adding water. The mixture was extracted with ethyl acetate. The organic phase was washed with water and brine, dried over anhydrous Na_2SO_4 and concentrated under reduced pressure.
