## Supplementary Figures

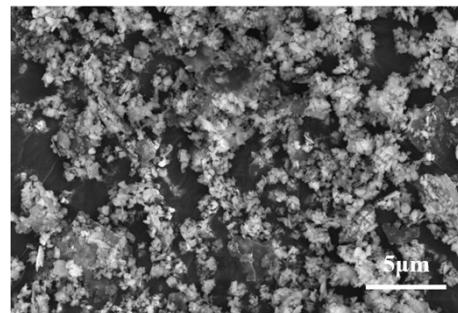

Fig.S1 SEM image of the commercial LLZTO particle

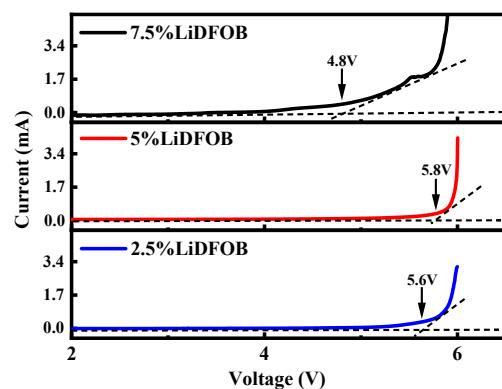

Fig.S2 LSV curves of the PVDF layer with different LiDFOB amounts

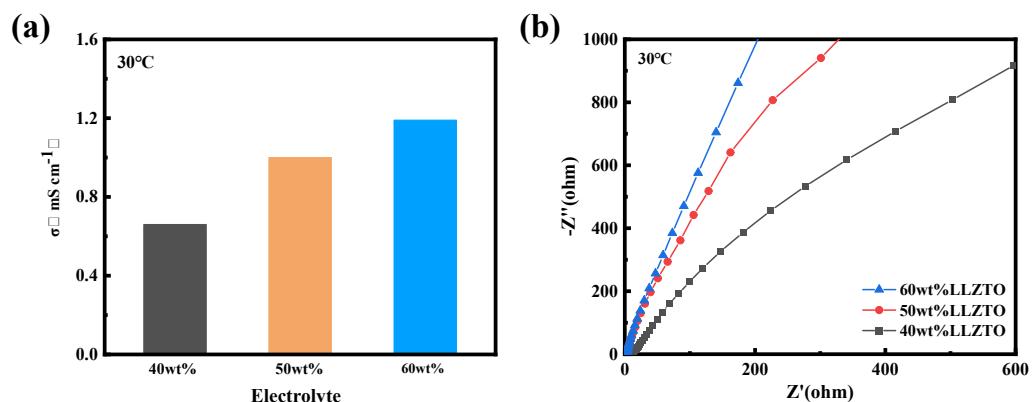

Fig.S3 (a) Ionic conductivities and (b) EIS plots of the PEO layers with various LLZTO contents

at 30 °C

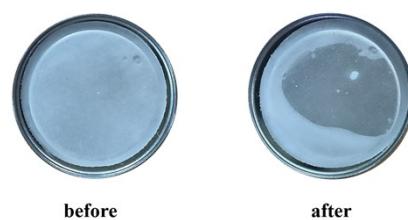

Fig. S4 Pictures of the PVDF layer assembled in the coin cell before and after external pressure

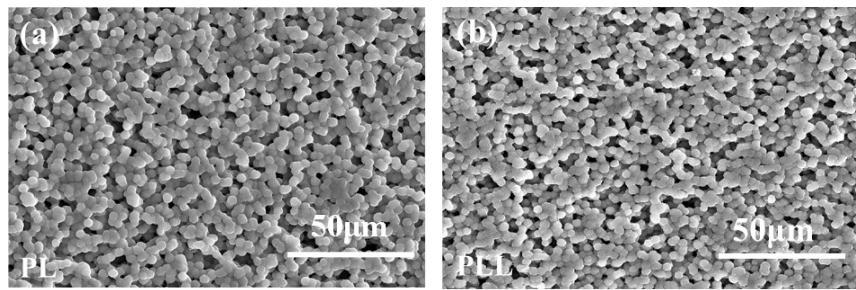

Fig.S5 SEM images of (a) PL and (b) PLL electrolytes

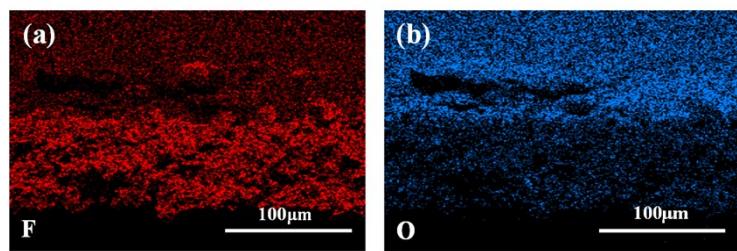

Fig.S6 The EDS mappings of (a) F element and (b) O element corresponding to the cross-section image of the g-BSPE in Fig.2c

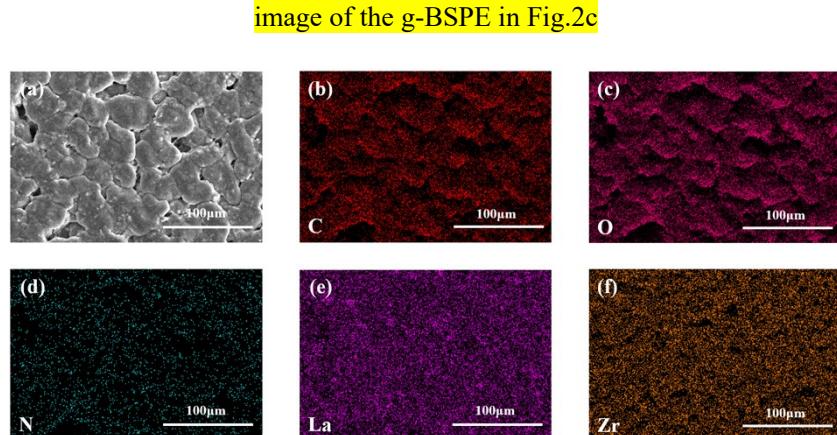

Fig.S7 Surface image of (a) the PEO layer and (b) the corresponding EDS mappings for elemental distribution analyses

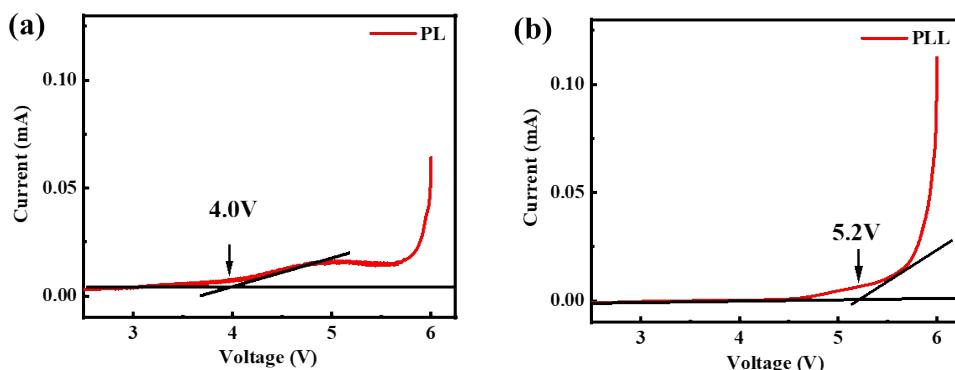

Fig.S8 LSV curves of (a) PL and (b) PLL electrolytes

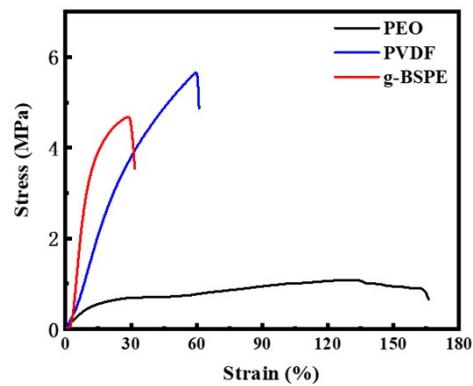

Fig.S9 Stress-strain curves of PEO layer, PVDF layer and g-BSPE

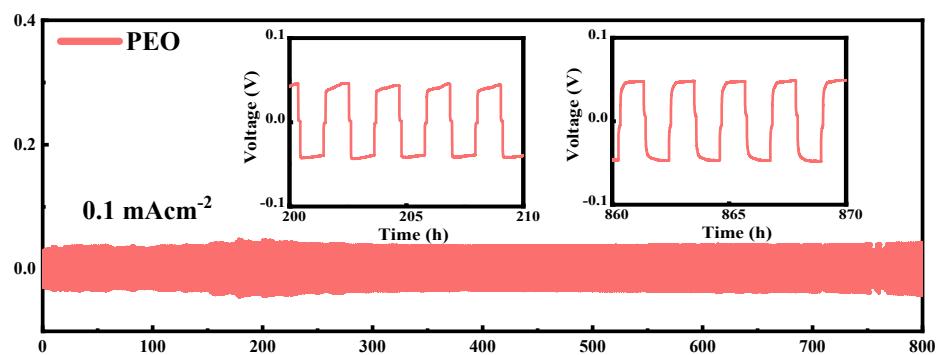

Fig.S10 Plating/stripping cycling of Li|Li symmetrical cells in the PEO layer at  $0.1 \text{ mA cm}^{-2}$

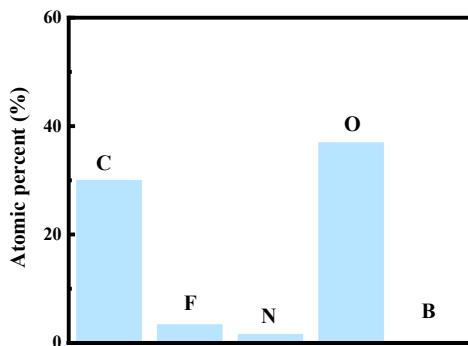

Fig.S11 The atomic percent on the Li surface in contact with PEO layer after cycling

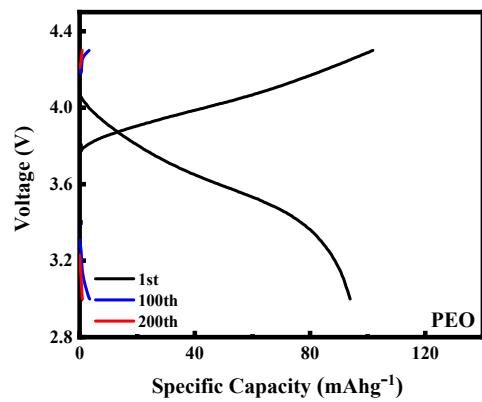

Fig.S12 Charge/discharge profiles of the NCM/Li cell in the PEO layer during cycling at 1C

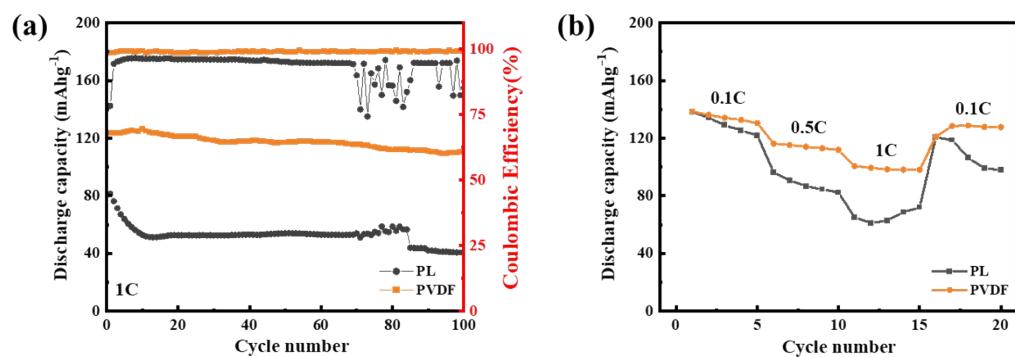

Fig.S13 Comparison of (a) cycle and (b) rate performance between NCM/PVDF/Li cell and NCM/PL/Li cell

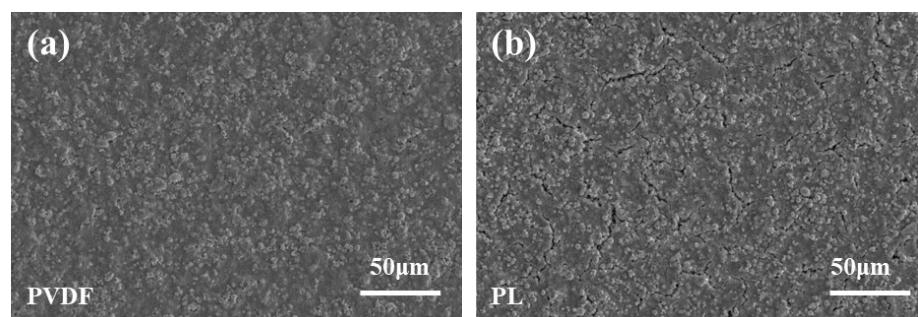

Fig.S14 SEM images of the cycled cathodes from (a) NCM/PVDF/Li cell and (b) NCM/PL/Li cell

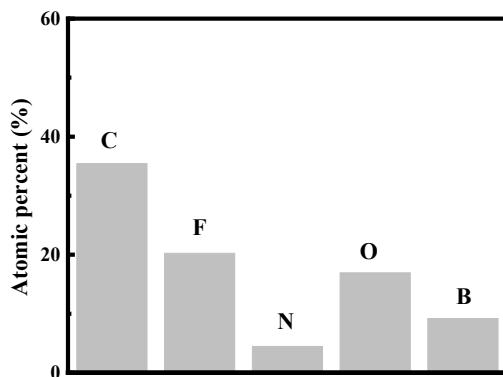

Fig.S15 The atomic percent on the NCM cathode after cycling in the g-BSPE

## Supplementary Tables

**Table S1 Particle size distribution of the commercial LLZTO**

	D10	D50	D90	D100
LLZTO	$\geq 200\text{nm}$	$\approx 400\text{ nm}$	$\leq 800\text{ nm}$	$\leq 1000\text{ nm}$

**Table S2 Ionic conductivities of various SPEs at different temperatures**

SPE	Ionic conductivity ( $\sigma$ ) /mS cm <sup>-1</sup>				
	30°C	40°C	50°C	60°C	70°C
PEO	1.00	1.34	1.63	1.83	2.00
PVDF	0.64	0.94	1.14	2.70	2.94
<b>g-BSPE</b>	<b>0.99</b>	<b>1.37</b>	<b>1.61</b>	<b>2.09</b>	<b>2.33</b>
PL	0.13	0.14	0.23	0.31	0.40
PLL	0.60	0.78	0.81	1.10	1.61
