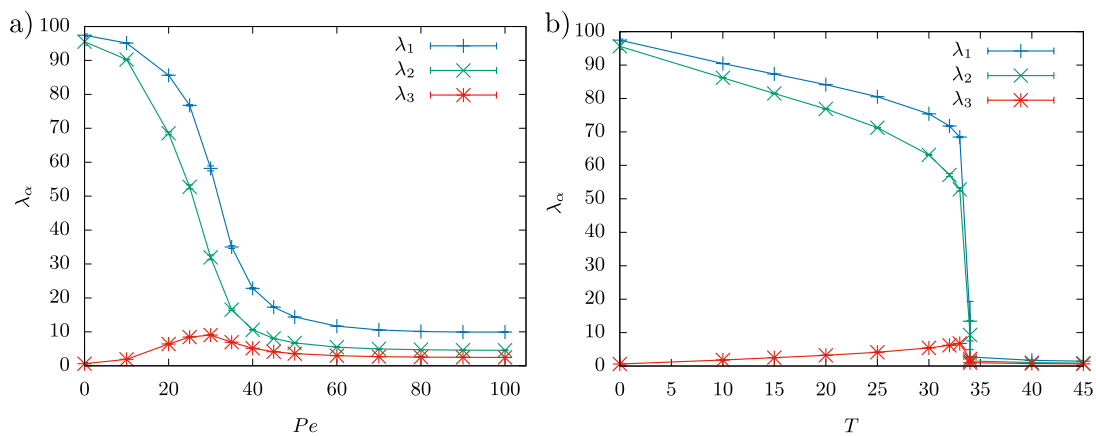

FIG. 1: (a) Eigenvalues of shape-tensor, λ_α , for ideal membranes as a function of Péclet number Pe . (b) Eigenvalues of shape-tensor, λ_α , for ideal membranes as a function of temperature T . The system size of the membrane is $N = 1142$ and the eigenvalues are sorted by size with $\lambda_1 > \lambda_2 > \lambda_3$. The bending constant $\kappa = 10$.
