

1 **Supporting Material**

2 Table S1. Parameters for cylinder form factor fit to laponite in D₂O. Scale, equivalent to volume
3 fraction in this model, was determined by conversion of w/w concentration to v/v using the density
4 of laponite (2.53 g/mL)³ and D₂O (1.11 g/mL). SLD of laponite is sourced from the literature.³⁷
