Calculation of sound sensitivity (S)

If the voltage signal of hydrophone is $10^{-3.5}\text{V}$ under a sound pressure of 1Pa , then the sensitivity is:

$$10^{-3.5} \text{ V} / 1 \text{ Pa} = 10^{-3.5}\text{V/Pa}.$$

The S can be further defined as:

$$S = 20 \times \lg[(10^{-3.5}\text{V/Pa}) / (1 \text{ V}/\mu\text{Pa})] = 20 \times \lg(10^{-9.5}) = -190 \text{ dB}$$

Calculation of sound pressure

Firstly, the environmental noise is determined when no extra sound generator was used.

After FFT analyses of the voltage output, the voltage spectra for the surrounding noise is obtained. If the voltage at 2 kHz is $2 \times 10^{-2} \text{ V}$, then the surrounding noise at 2 kHz is $20 \times \lg(20^{-2}) = -34 \text{ dB}$.

If the S value of the hydrophone is -192 dB , then the sound pressure level (SPL) is $-34 - (-192) = 158 \text{ dB}$.

Table. S1. Sensitivity comparison of hydrogel-based mechanosensors.

Entry	Dielectric layer (wood-based)/ Transfer media	Electrode	Working mode	Sensitivity, kPa ⁻¹	Ref.
1	Elastic ionic polyacrylamide hydrogel (EIPH)	Indium-tin oxide electrode	Microcapacitive mechanosensors	2.33	[S1]
2	TA@ HAP NWs/AlCl ₃ /PVA /ethylene glycol (EG)/water	NR	Ionic conductive strain sensors	GF = 2.84	[S2]
3	TOCNF/PVA/borax/CaCl ₂	PVA hydrogel	Microcapacitive mechanosensors	0.75	[S3]
4	A polyacrylamidehydrogel containing NaCl as the ionic conductor/acrylicelastomer (VHB)	Electrical double Layer	Ionic conductive sensors	1	[S4]
5	CNT forest elastic electrodes and intermediate elastic insulating layer	vCNT electrode	Microcapacitive mechanosensors	56.5	[S5]
6	A poly-(dimethylsiloxane) (PDMS) dielectric layer structure with tilted micropillar arrays	Au electrode	Microcapacitive mechanosensors	0.42	[S6]
7	Colorless polyimide (CPI)	Top AgNWs electrode and micropatterned bottom electrode	Microcapacitive mechanosensors	1.2	[S7]
8	C/ECH/NaCl	Copper foil	Microcapacitive mechanosensors	0.6	[S8]
This work	Amphibious dielectric hydrogel (Ni-CH) (conducting direct thermally-induced radical polymerization of PAAc in the presence of cellulose nanofibers (CNFs) on a thin nickel foam)	Carbon fiber electrode	Microcapacitive mechanosensors	182	This work
