

Supplementary Table 3. Comparative analysis of proteins adsorbed CaZn-doped coatings with respect to Ca. Proteins with ANOVA p < 0.05 (yellow) and a ratio higher than 1.5 in either direction were considered as significantly different (in bold). Proteins with increased affinity to ZnCl₂ coatings in comparison to MT are marked in red, while those with reduced affinity appear in green. Proteins highlighted in blue are dysregulated only for MT-Ca0.5Zn formulation.
