Supporting Information (SI)

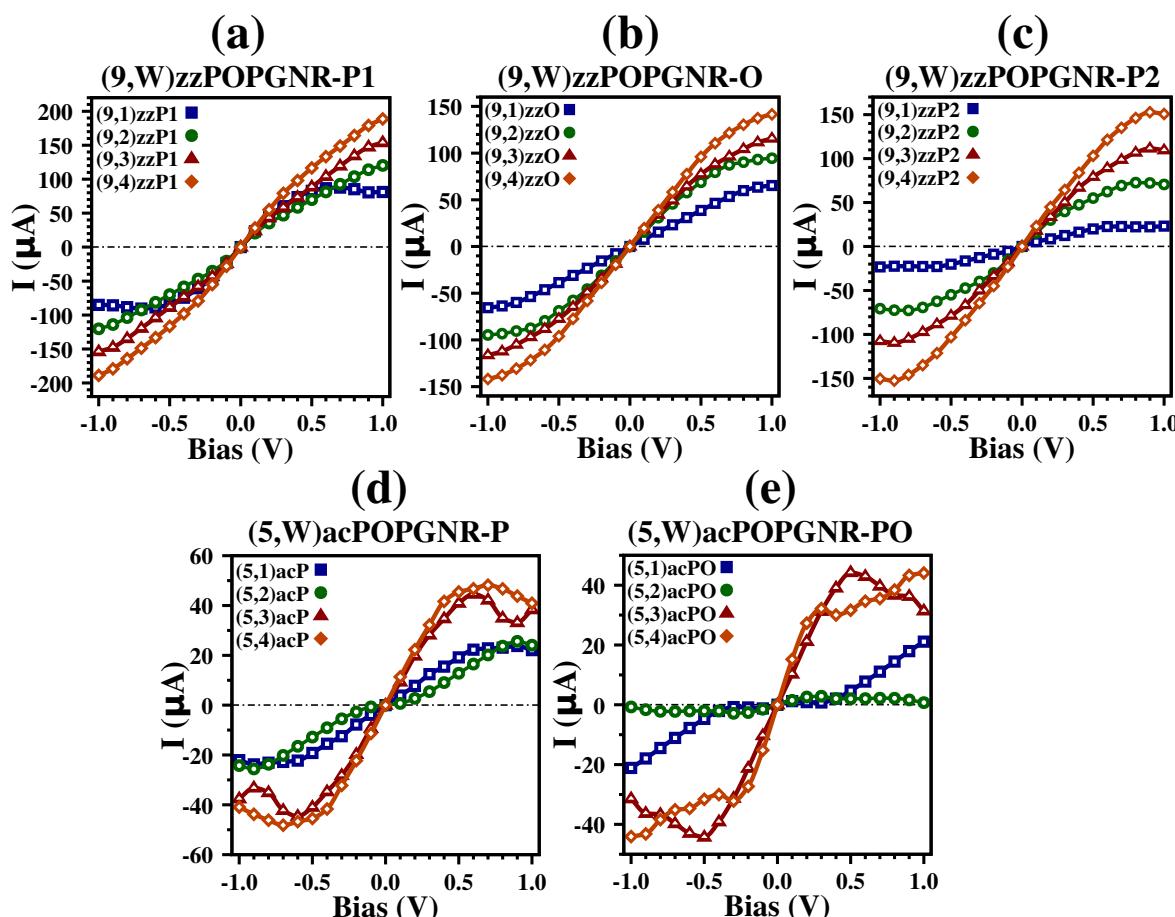

Fig. S1. Comparative of I-V curve for all molecular devices: (a) (9,w)zzP1, (b) (9,w)zzO, (c) (9,w)zzP2, (d) (5,w)acP, and (e) (5,w)acPO. We clearly see that the I values of zz nanoribbons are higher than ac cases.

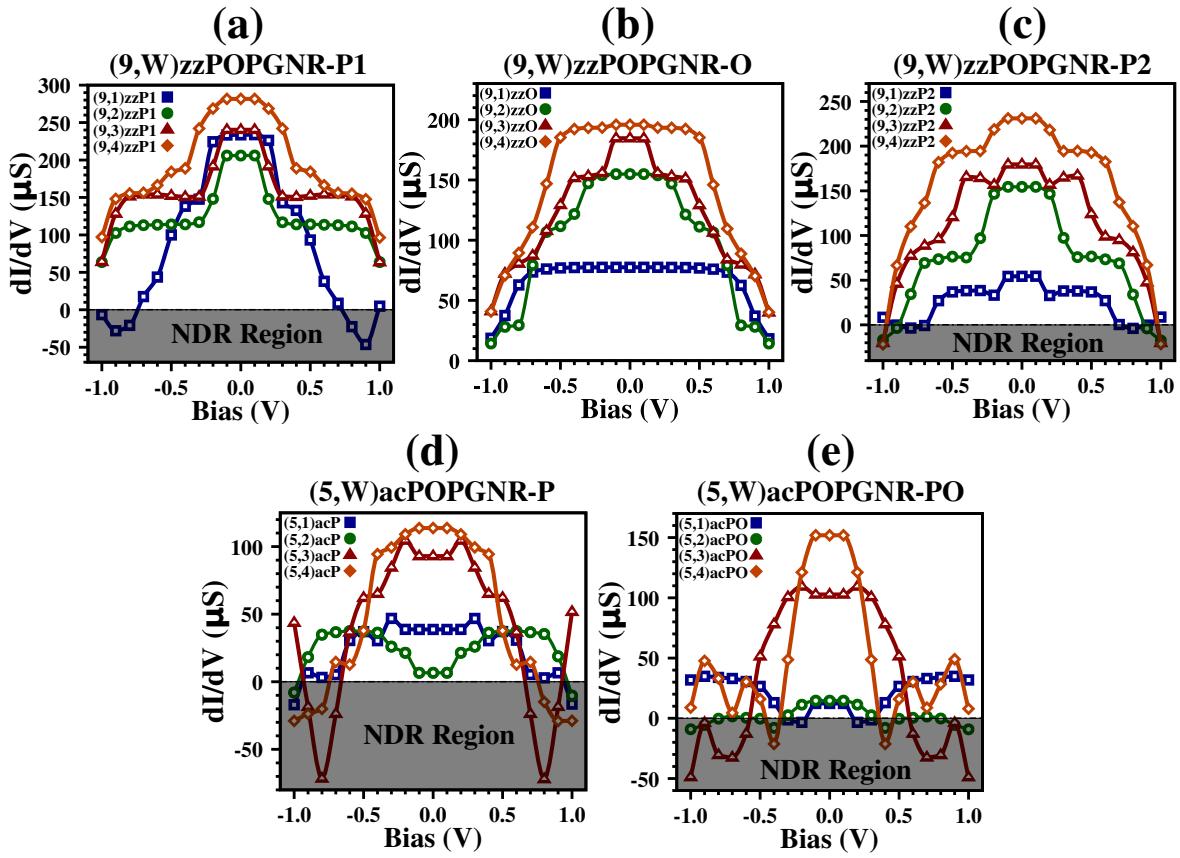

Fig. S2. Comparative of (dI/dV) - V curve for all molecular devices: (a) $(9,w)zzP1$, (b) $(9,w)zzO$, (c) $(9,w)zzP2$, (d) $(5,w)acP$, and (e) $(5,w)acPO$. We clearly see that the conductance of zz nanoribbons are higher than ac cases.
