### **Supplementary Information**

**Table S1.** Selected peaks from  $^1\text{H}$  and  $^{13}\text{C}$  NMR for complexes **1-4** and several related in the literature. The chemical shift ( $\Delta\delta$ ) from free ethylene represents  $\Delta\delta = \delta$  (metal complex) –  $\delta$  (free ethylene). For comparison, free ethylene has chemical shifts of  $\delta$  5.40 ( $^1\text{H}$ ) and 123.1 ( $^{13}\text{C}$ ) ppm in  $\text{CDCl}_3$ . <sup>a</sup>Data acquired at  $-90^\circ\text{C}$ .

### Photoluminescence studies:

**Experimental procedure:** The  $1 \times 10^{-3}$  M to  $1.5 \times 10^{-3}$  M stock solutions of the compound of interest were prepared in anhydrous dichloromethane under nitrogen. These solutions were diluted to  $4 \times 10^{-4}$  M solution for data collection. The photoluminescence studies were done under nitrogen.

**Table S7.** Comparison of photoluminescence data of **1-4** complexes, [L1Cu][SbF<sub>6</sub>] and [L1Ag][SbF<sub>6</sub>] in dichloromethane ( $4 \times 10^{-4}$  M solution) at 360 nm.
