Supplementary Table 2. Risk of incident Allergic rhinitis according to PRS score

	Total No. of Participants	No. of dementia cases/person-years	HR (95% CI)	P value
Model 1^a				
Low	30686	223/380620	1[reference]	—
Intermediate	61372	547/761627	1.23(1.05,1.44)	0.009

Intermediate	61372	547/761627	1.19(1.02,1.39)	0.026
High	30686	381/380807	1.62(1.37,1.91)	<0.001

HRs and 95% CIs were computed by Cox proportional hazard regressions.

^a Model 1 was adjusted for age, sex, ethnicity, education, TDI.

^b Model 2 was adjusted for model 1 + BMI, sleep duration, smoking status, drinking status, asthma, diabetes, hypertension, and physical activity.

Low, quartile 1; Intermediate, quartile 2 to 3; High, quartile 4.

Sensitivity analysis 1: excluded cases with related diseases such as asthma, nasal and pharyngeal diseases, diabetes, and severe heart disease at baseline.

Sensitivity analysis 2: excluded participants with allergic rhinitis during the first five-year follow-up.

Sensitivity analysis was adjusted for fitted model 2. Covariates adjusted for age, sex, education, race, TDI, BMI, sleep duration, smoking status, drinking status, asthma, diabetes, hypertension and physical activity.
