**Corresponding authors:** Xinrui Miao (msxrmiao@scut.edu.cn); Lei Ying (msleiying@scut.edu.cn)

**Synthesis:** All chemicals and reagents were used as received from commercial sources without further purification. Solvents for chemical synthesis were purified according to the standard procedures.

**Scheme S1.** Synthetic route of ETTP derivatives.

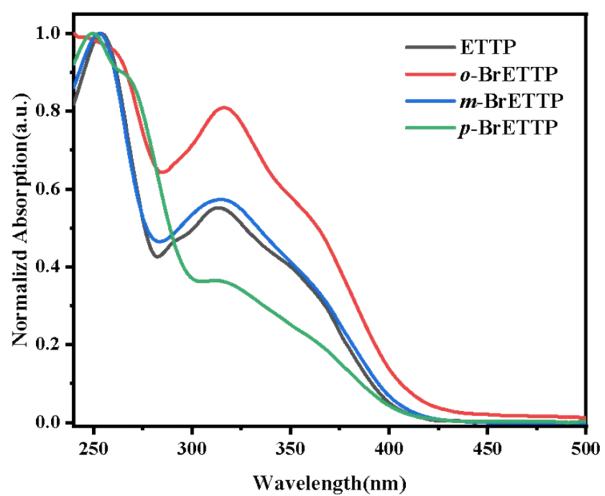

**ETTP:** TPE (1.00 g, 3 mmol) and  $\text{AlCl}_3$  (4.00 g, 30 mmol) were added to a 100 ml round-bottom flask. Subsequently, dissolve the solid completely by adding 10 ml of nitrobenzene solution. Weigh benzoyl chloride (4.22 g, 3.48 ml, 30 mmol) and mix it with 10 ml of nitrobenzene before dropping the mixture into the round-bottom flask. Seal the flask and heat it to  $100^\circ\text{C}$  for a reaction period of 18 hours while monitoring progress periodically. Upon completion of the reaction, quench with dilute NaOH solution and extract the organic layer using dichloromethane; repeat this extraction process three times. Concentrate the organic layer via rotary evaporation to obtain a crude product which can be further purified through silica gel column chromatography resulting in yellow solid powder (1.08 g) yield after recrystallization with ethanol at a yield of 48.1%.  $^1\text{H}$  NMR (600 MHz, Chloroform-d)  $\delta$  7.76 (d,  $J = 6.8$  Hz, 8H), 7.65 (d,  $J = 8.3$  Hz, 8H), 7.58 (t,  $J = 7.4$  Hz, 4H), 7.47 (t,  $J = 7.7$  Hz, 8H), 7.20 (d,  $J = 8.2$  Hz, 8H).  $^{13}\text{C}$  NMR (126 MHz, Chloroform-d)  $\delta$  196.01, 146.50, 141.88, 137.43, 136.32, 132.52, 131.16, 130.03, 129.94, 128.34. HRMS (ESI, m/z): [M]<sup>+</sup> calcd for  $\text{C}_{54}\text{H}_{36}\text{NaO}_4$ , 771.2506, found 771.2503.

***o*-BrETTP:** The synthetic/ purified methods and dosage of raw materials are the same as ETTP, but benzoyl chloride is replaced by 2-bromobenzoyl chloride. The yellow powder (1.30 g) is obtained with

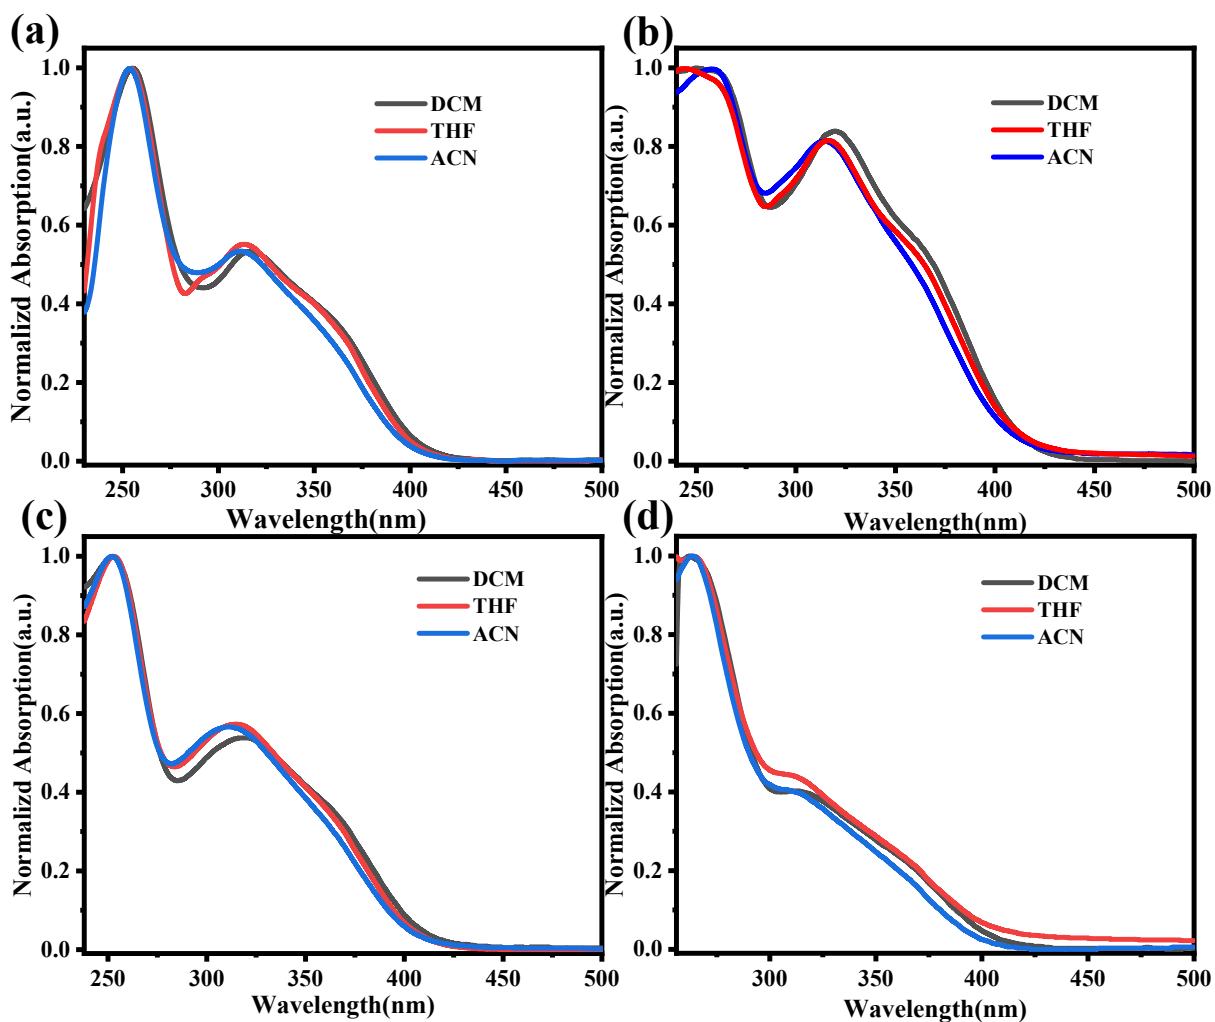

yields of 40.8%.  $^1\text{H}$  NMR (600 MHz, Chloroform-d)  $\delta$  7.62 (dd,  $J = 7.8, 1.2$  Hz, 4H), 7.59-7.55 (m, 8H), 7.41 (td,  $J = 7.5, 1.1$  Hz, 4H), 7.36-7.31 (m, 8H), 7.12-7.08 (m, 8H).  $^{13}\text{C}$  NMR (126 MHz, Chloroform-d)  $\delta$  195.17, 147.26, 142.22, 140.37, 135.11, 133.24, 131.44, 131.32, 130.02, 129.10, 127.29, 119.59. HRMS (ESI, m/z): [M]<sup>+</sup> calcd for C<sub>54</sub>H<sub>32</sub>Br<sub>4</sub>NaO<sub>4</sub>, 1082.8926, found 1082.8921.

**m-BrETTP:** The synthetic/ purified methods and dosage of raw materials are the same as ETTP, but benzoyl chloride is replaced by 3-bromobenzoyl chloride. The yellow powder (1.37 g) is obtained with yields of 42.5%.  $^1\text{H}$  NMR (600 MHz, Chloroform-d)  $\delta$  7.62 (dd,  $J = 7.8, 1.2$  Hz, 4H), 7.59-7.55 (m, 8H), 7.41 (td,  $J = 7.5, 1.1$  Hz, 4H), 7.36-7.31 (m, 8H), 7.12-7.08 (m, 8H).  $^{13}\text{C}$  NMR (126 MHz, Chloroform-d)  $\delta$  195.17, 147.26, 142.22, 140.37, 135.11, 133.24, 131.44, 131.32, 130.02, 129.10, 127.29, 119.59. HRMS (ESI, m/z): [M]<sup>+</sup> calcd for C<sub>54</sub>H<sub>32</sub>Br<sub>4</sub>NaO<sub>4</sub>, 1082.8926, found 1082.8990.

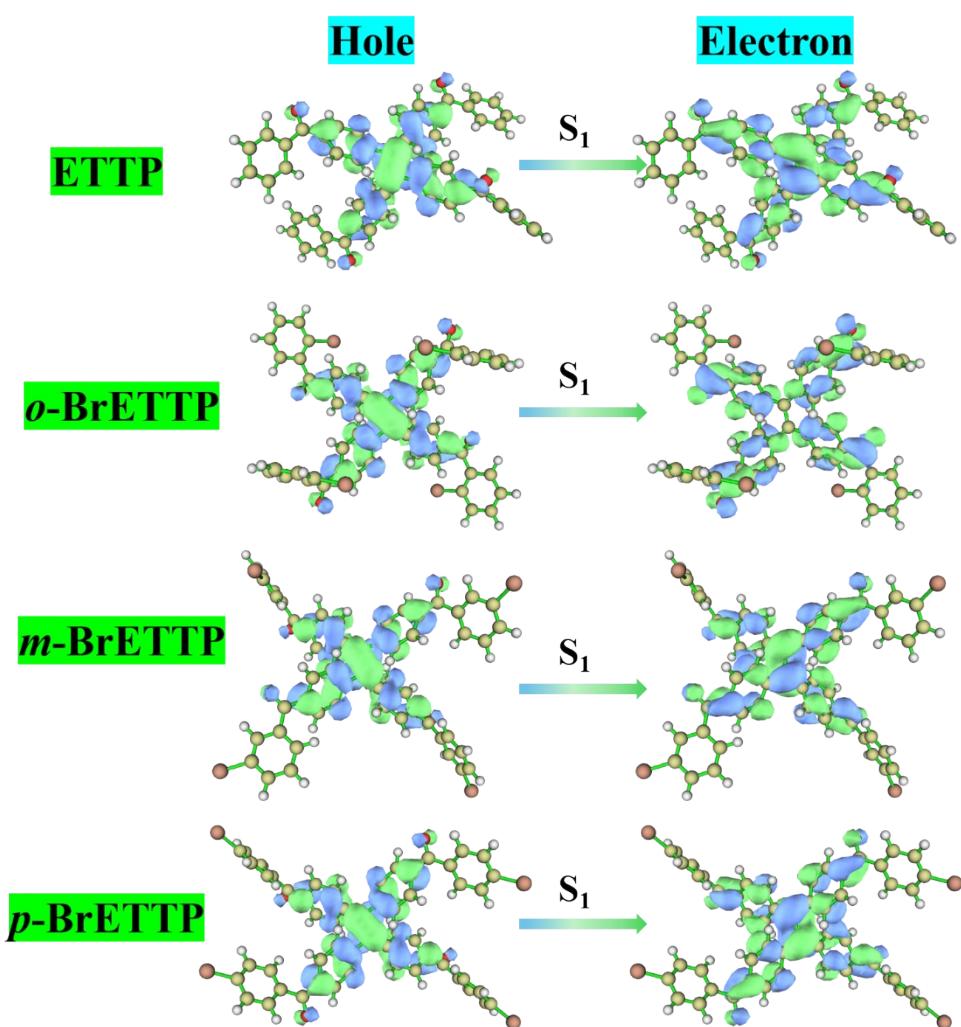

**p-BrETTP:** The synthetic/ purified methods and dosage of raw materials are the same as ETTP, but benzoyl chloride is replaced by 4-bromobenzoyl chloride. The yellow powder (1.46 g) is obtained with yields of 45.7%.  $^1\text{H}$  NMR (600 MHz, Chloroform-d)  $\delta$  7.62 (dd,  $J = 7.8, 1.2$  Hz, 4H), 7.59-7.55 (m, 8H), 7.41 (td,  $J = 7.5, 1.1$  Hz, 4H), 7.36-7.31 (m, 8H), 7.12-7.08 (m, 8H).  $^{13}\text{C}$  NMR (126 MHz, Chloroform-d)  $\delta$  195.17, 147.26, 142.22, 140.37, 135.11, 133.24, 131.44, 131.32, 130.02, 129.10, 127.29, 119.59. HRMS (ESI, m/z): [M]<sup>+</sup> calcd for C<sub>54</sub>H<sub>32</sub>Br<sub>4</sub>NaO<sub>4</sub>, 1082.8926, found 1082.8907.
