<b>Table S7.</b>	The electronic energy and the number of imaginary frequencies with their corresponding intensities of optimized structures for reaction III.	S17
<b>S1.</b>	The cartesian coordinates of key structures.	S18-S134

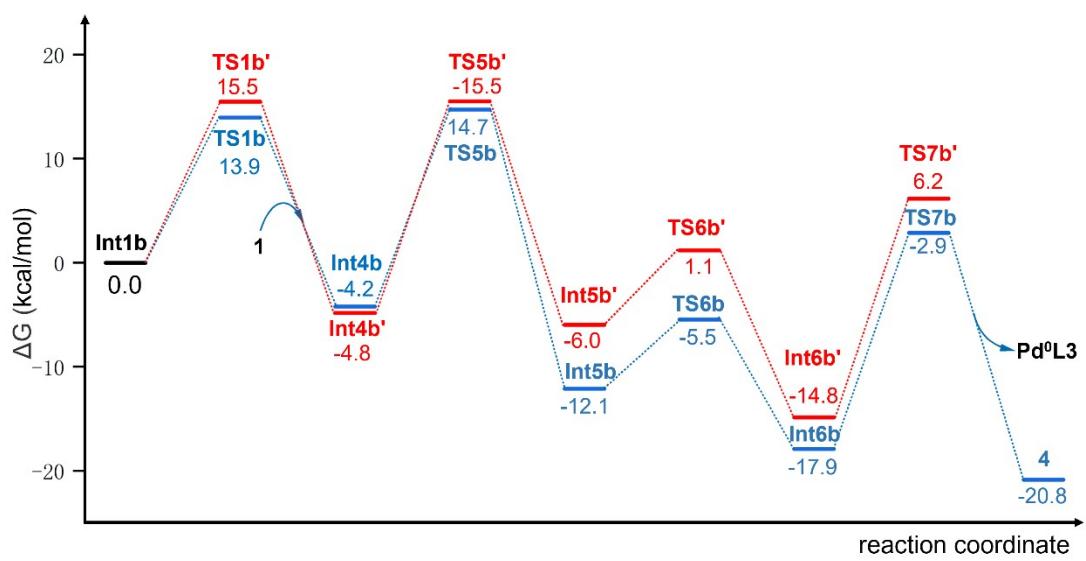

For reaction I, we have re-optimized all the species in the preferred pathway PA3 using Minnesota M06 functional with the same basis set (Figure S1, pink line). The calculating results showed that the activation energies difference of transition states **TS4a/TS5a/TS6a** and **TS4a'/TS5a'/TS6a'** is 1.3/1.1/0.4 kcal/mol.

For reaction II, we also calculated the key transition states and intermediates in pathways PB3 (Figure S3, red line). The energy difference between **TS1b/TS5b/TS6b/TS7b** and **TS1b'/TS5b'/TS6b'/TS7b'** is 1.5/1.4/0.5/0.2 kcal/mol.

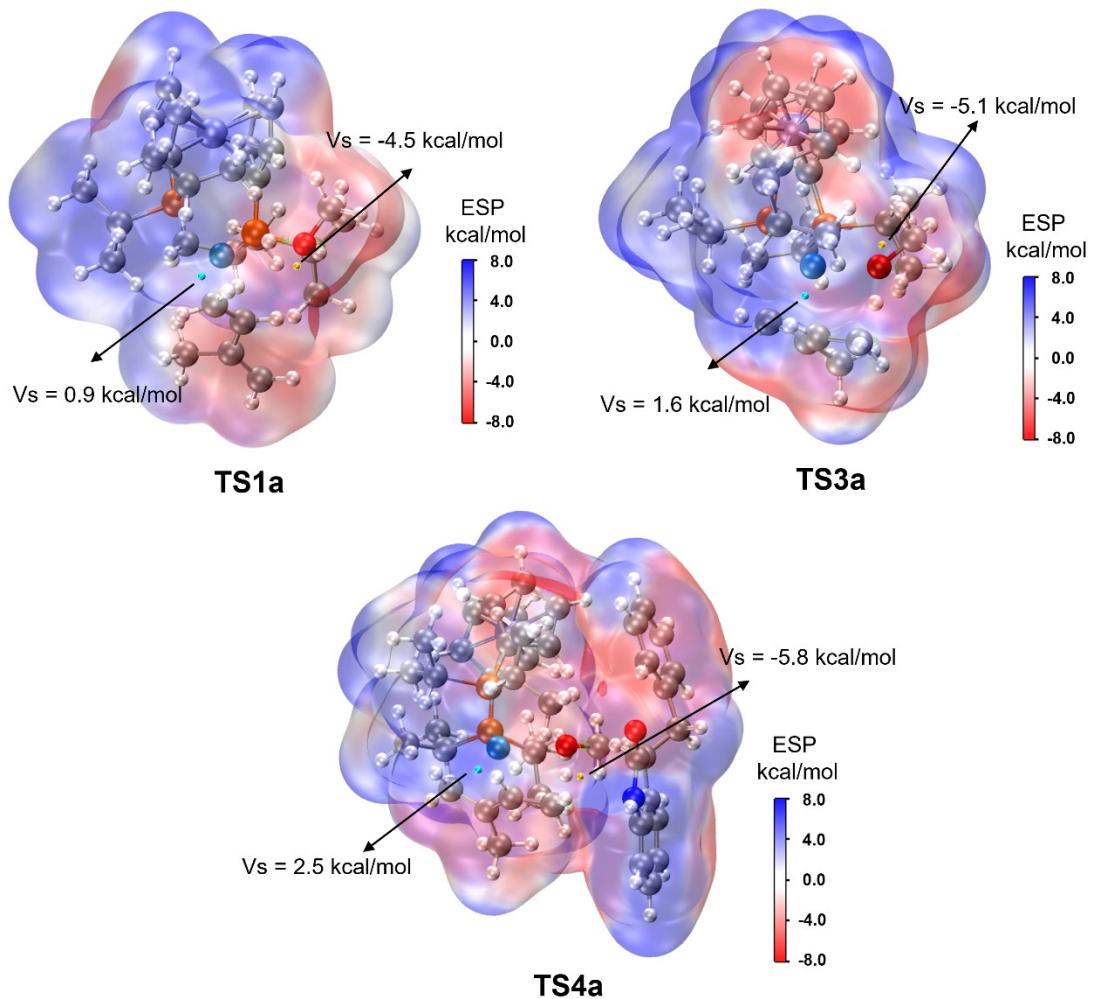

Thereby, the relatively small activation energy barrier difference indicates that our results based on B3LYP-D3 functional and a mixed basis set of SDD basis set for Pd and 6-311+G(d,p) for other atoms is reasonable.

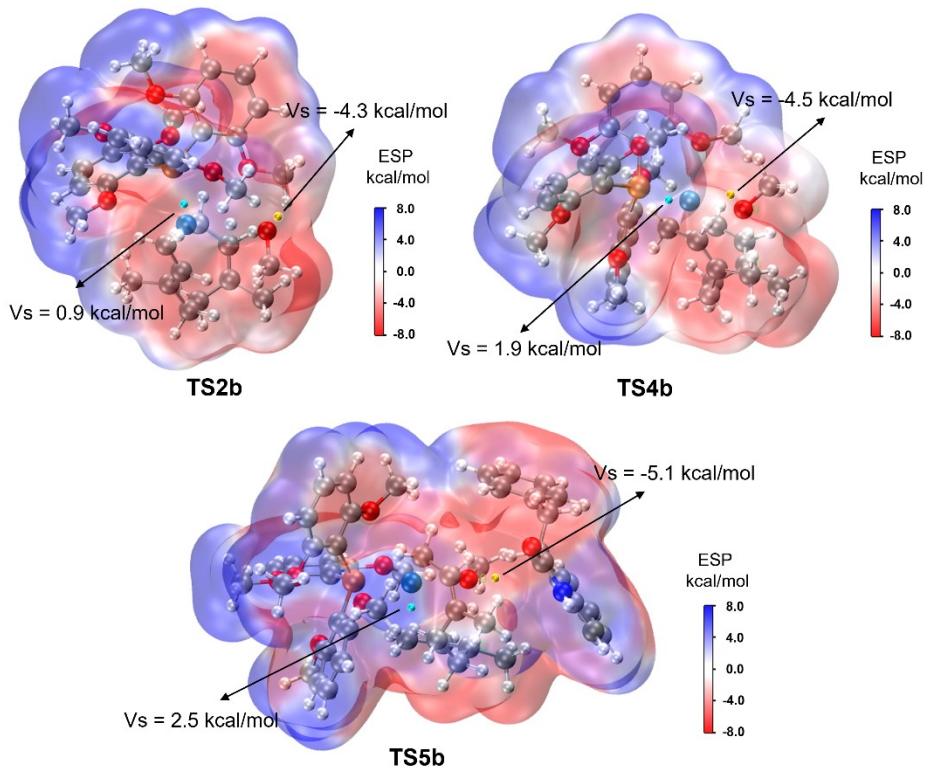

**Figure S1.** Energy profiles for the key structures in the most preferred pathway PA3 calculated by M06 functional (blue line) and B3LYP-D3 functional (pink line), free energies are given in kcal/mol.

**Figure S2.** Energy profiles for the key structures in the most preferred pathway PB3 calculated by M06 functional (blue line) and B3LYP-D3 functional (pink line), free energies are given in kcal/mol.
