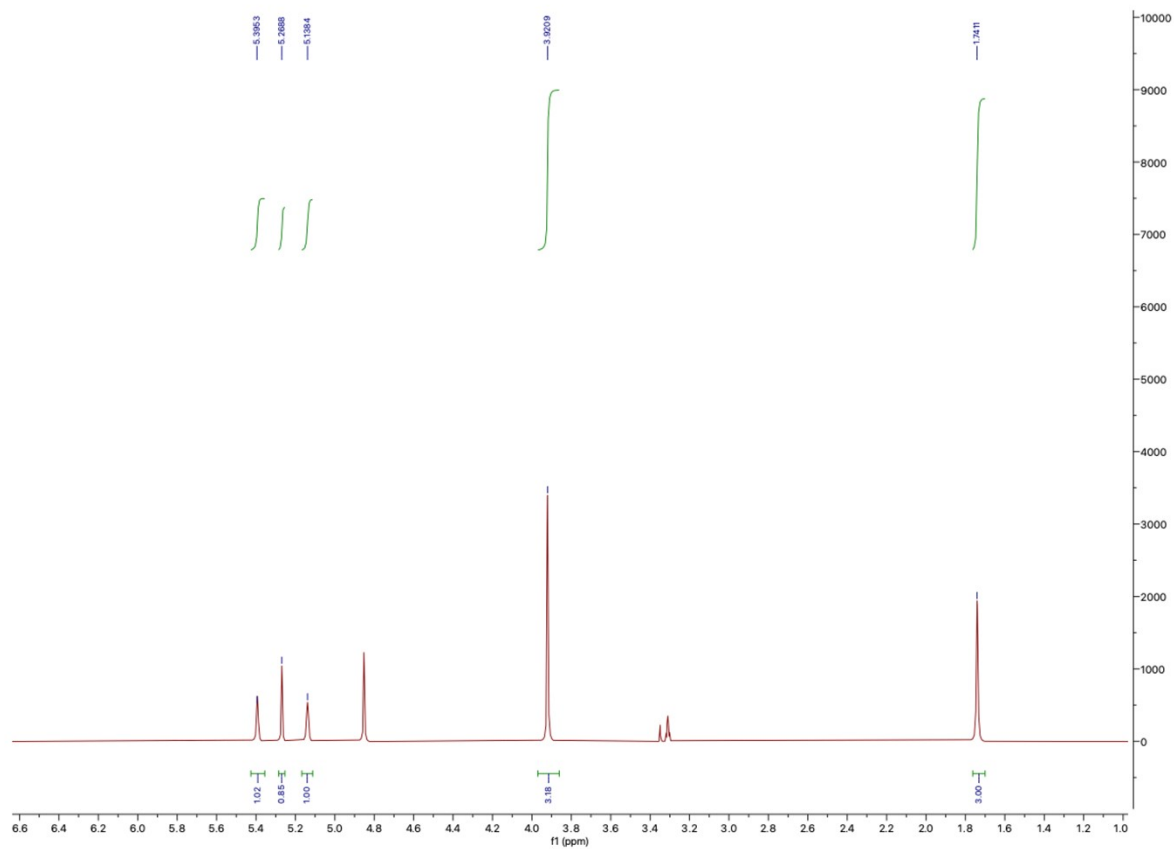

**Figure S1.** Confirmation of *mcrA*Δ in IMV01140. Nested primers were designed to amplify hygromycin resistance gene since *mcrA* coding region and selectable marker HygB are similar in size. Only strains with resistance gene would have a band (~1.8kb).

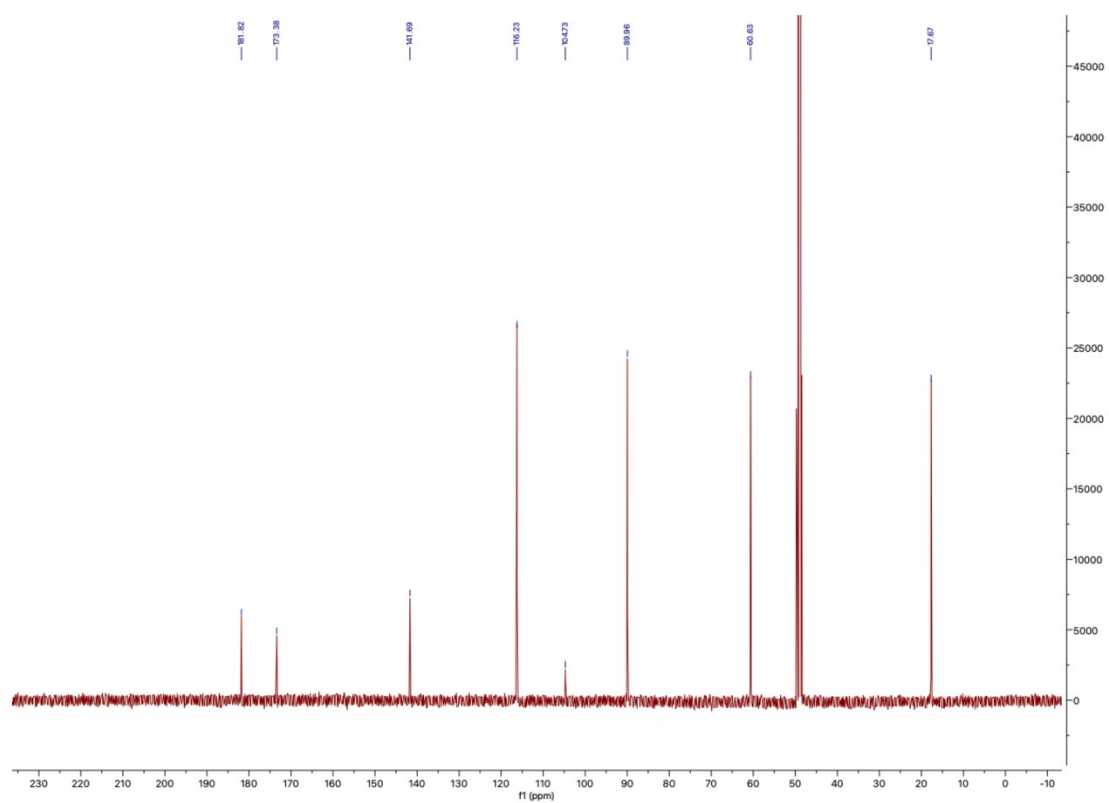

**Figure S2.** Screening fungal cultivation conditions using HPLC analysis. WT and mutant strains were cultured in 12 different conditions at 28°C for 6 days.

### ThT assay on Inhibitory of Penicillic Acid in Aggregation

**Figure S18.** ThT assay on inhibitory of PA in aggregation. Error bars represent standard deviations of triplicate measures.

**Figure S19.** IC<sub>50</sub> of PA. Using nonlinear curve fitting, we determined the IC<sub>50</sub> of PA to be 213 nM.

**Figure S20.** SAR study of penicillic acid using biosensor cell seeding assay as an activity readout. (a) Penicillic acid analogs were synthesized as a series of keto-acid and lactone-stabilized forms (Compounds 17-19). (b) The biosensor seeding tau inhibition assay was used as an activity readout for analogs 17-19.

**Table S1.** Primers used in this study. (Yuan, et al. 2023)
