Covalent Targeting of PSMD14 by Eupalinolide B Induces Oncoprotein Degradation and Apoptosis in Acute Promyelocytic Leukemia Cells

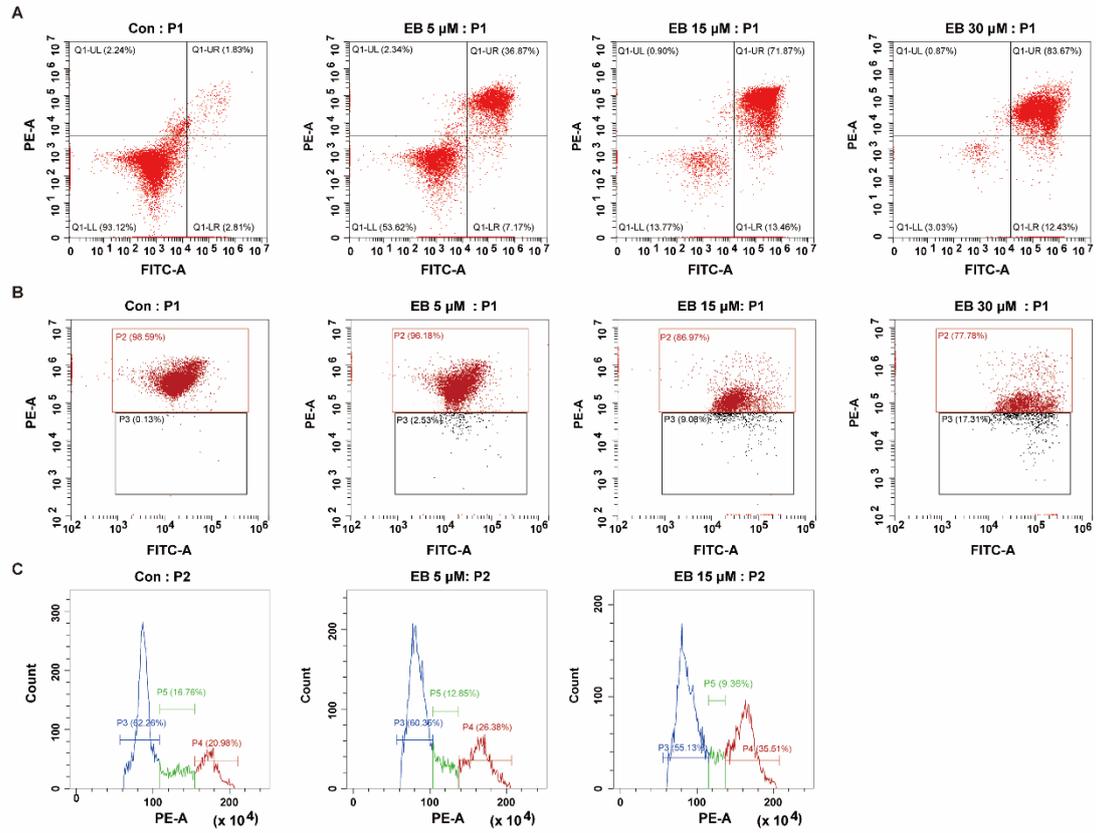

Figure S1. (A) EB induced apoptosis of HL-60 cells in a dose dependent manner. (B) EB reduced mitochondrial membrane potential in HL-60 cells in a dose dependent manner. (C) EB significantly affected the cell cycle progression of HL-60 cells.

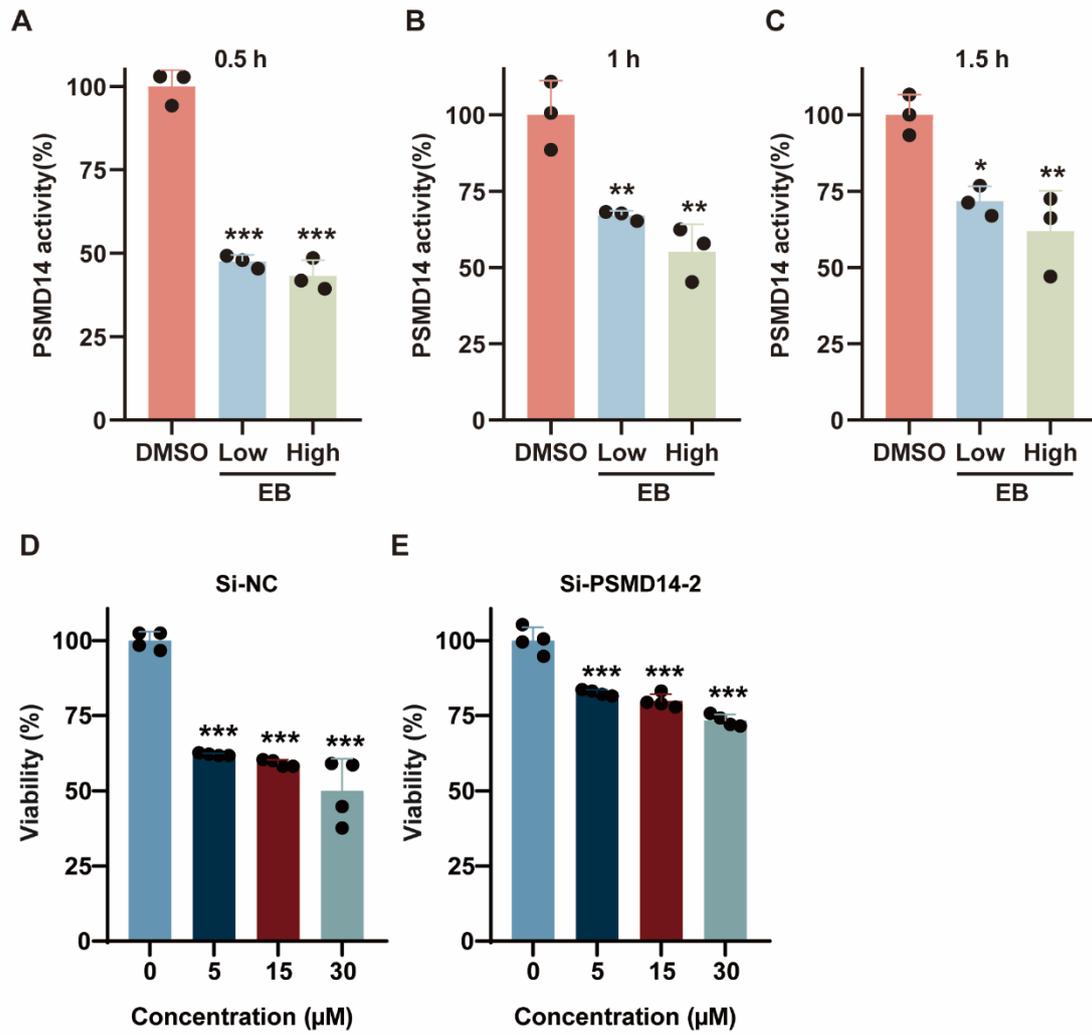

Figure S2. (A-C) The enzyme activity of PSMD14 was significantly inhibited by EB. (D) EB had a strong inhibitory effect on normal HL-60 cells. (E) PSMD14 knockdown alleviated the inhibitory effect of EB on HL-60 cells.
