Experimental

Chemicals and materials

$\text{Ni}(\text{CH}_3\text{COO})_2 \bullet 4\text{H}_2\text{O}$, $\text{Na}_2\text{MoO}_4 \bullet 2\text{H}_2\text{O}$ and urea were purchased from Sinopharm Chemical Reagent Co., Ltd. $\text{Co}(\text{NO}_3)_2 \bullet 6\text{H}_2\text{O}$ was provided from Shanghai Aladdin Biochemical Technology Co., Ltd. NH_4F was provided from Shanghai Macklin Biochemical Technology Co., Ltd. Nickel foam (NF) was purchased from Suzhou Keshenghe Metal Materials Co., LTD. The deionized water was purified and collected by a Youpu ultrapure water purification system.

Sample synthesis

Synthesis of $\text{Co(OH)}_2/\text{NF}$

A piece of NF ($1 \times 2 \text{ cm}$) was treated in immersed in 1 M HCl for 30 min to remove the nickel oxides on the surface and then sequentially washed with deionized water and ethanol three times. Firstly, 9 mmol $\text{Co}(\text{NO}_3)_2$, 30 mmol urea and 16 mmol NH_4F were added in deionized water and pre-treated NF was added into above solution. Secondly, after heating at 120 °C for 6 h, $\text{Co(OH)}_2/\text{NF}$ was obtained.

Synthesis of $\text{Co(OH)}_2/\text{NiMoO}_4/\text{NF}$

The $\text{Co(OH)}_2/\text{NF}$ was immersed mixed solution contained 0.025 mmol $\text{Ni}(\text{CH}_3\text{COO})_2$, 0.004 mmol Na_2MoO_4 and 0.1 mmol urea, which was heated for 10 h at 160 °C. The hierarchica $\text{Co(OH)}_2/\text{NiMoO}_4/\text{NF}$ heterostructure was thus prepared with cooling to room temperature. To determine the optimal growth duration of NiMoO_4 , we prepared three samples under identical conditions for durations of 5 hours, 15 hours, and 20 hours, respectively. These samples were designated as $\text{Co(OH)}_2/\text{NiMoO}_4\text{-5/NF}$, $\text{Co(OH)}_2/\text{NiMoO}_4\text{-15/NF}$, and $\text{Co(OH)}_2/\text{NiMoO}_4\text{-20/NF}$. Furthermore, unless otherwise specified, all references to $\text{Co(OH)}_2/\text{NiMoO}_4/\text{NF}$ in this work correspond to samples prepared with a NiMoO_4 growth time of 10 hours.

Materials characterization

The morphologies of as-prepared electrodes were study by field-emission scanning electron microscope (SEM, Nova NanoSEM 450) and transmission electron microscopy (TEM, FEI Talos F200S). The diffractometer of Philips PW-1830 equipped with a Cu K α radiation ($\lambda = 0.15406 \text{ nm}$) is used to record X-ray powder diffraction (XRD) patterns of obtained electrodes. X-ray photoelectron spectroscopy (XPS) are measured by Perkin-Elmer model PHI 5600 XPS system with an Al K α X-ray source (1486.6 eV).

Electrochemical Characterizations

All the electrochemical performances were tested with the CHI760E workstation (CH Instruments, Inc., Shanghai) with obtained catalysts as working electrode. Linear sweep voltammetry (LSV) measurements were carried out at a scan rate of 5 mV s^{-1} . Unless otherwise specified, each potential was iR -corrected. Cycle voltammetry (CV) curves were tested to estimate the electrochemically active surface with various scan rates and 20 continuous sweep cycles were performed to ensure consistency. Electrochemical impedance spectroscopy (EIS) analysis was carried out at the frequency range of 10 mHz-100 kHz with. The long-term (48 h) stability tests was performed using chronopotentiometric measurements with a constant current density of 10 mA cm^{-2} .

DFT Calculations

The Quantum Espresso [1] based on the projector augmented wave (PAW) method [2] was implemented in computational work. Perdew-Burke-Ernzerhof (PBE) generalized gradient approximation (GGA) [3] and DFT-D3 method [4] were employed to describe the exchange-correlation functional and van der Waals forces. The Monkhorst-Pack k-point [5] of $12 \times 10 \times 1$ grids and a kinetic energy cut-off of 50 Ry were used in the computations, with the energy and force convergence criteria set to 10-4 Ry/Bohr and 10-6 Ry, respectively. A 25 Å vacuum layer in the stack direction was introduced to avoid interaction between neighboring periodic structures. The heterostructure was simulated with a bilayer-thick of Co(OH)_2 and tetralayer-thick of NiMoO_4 .
