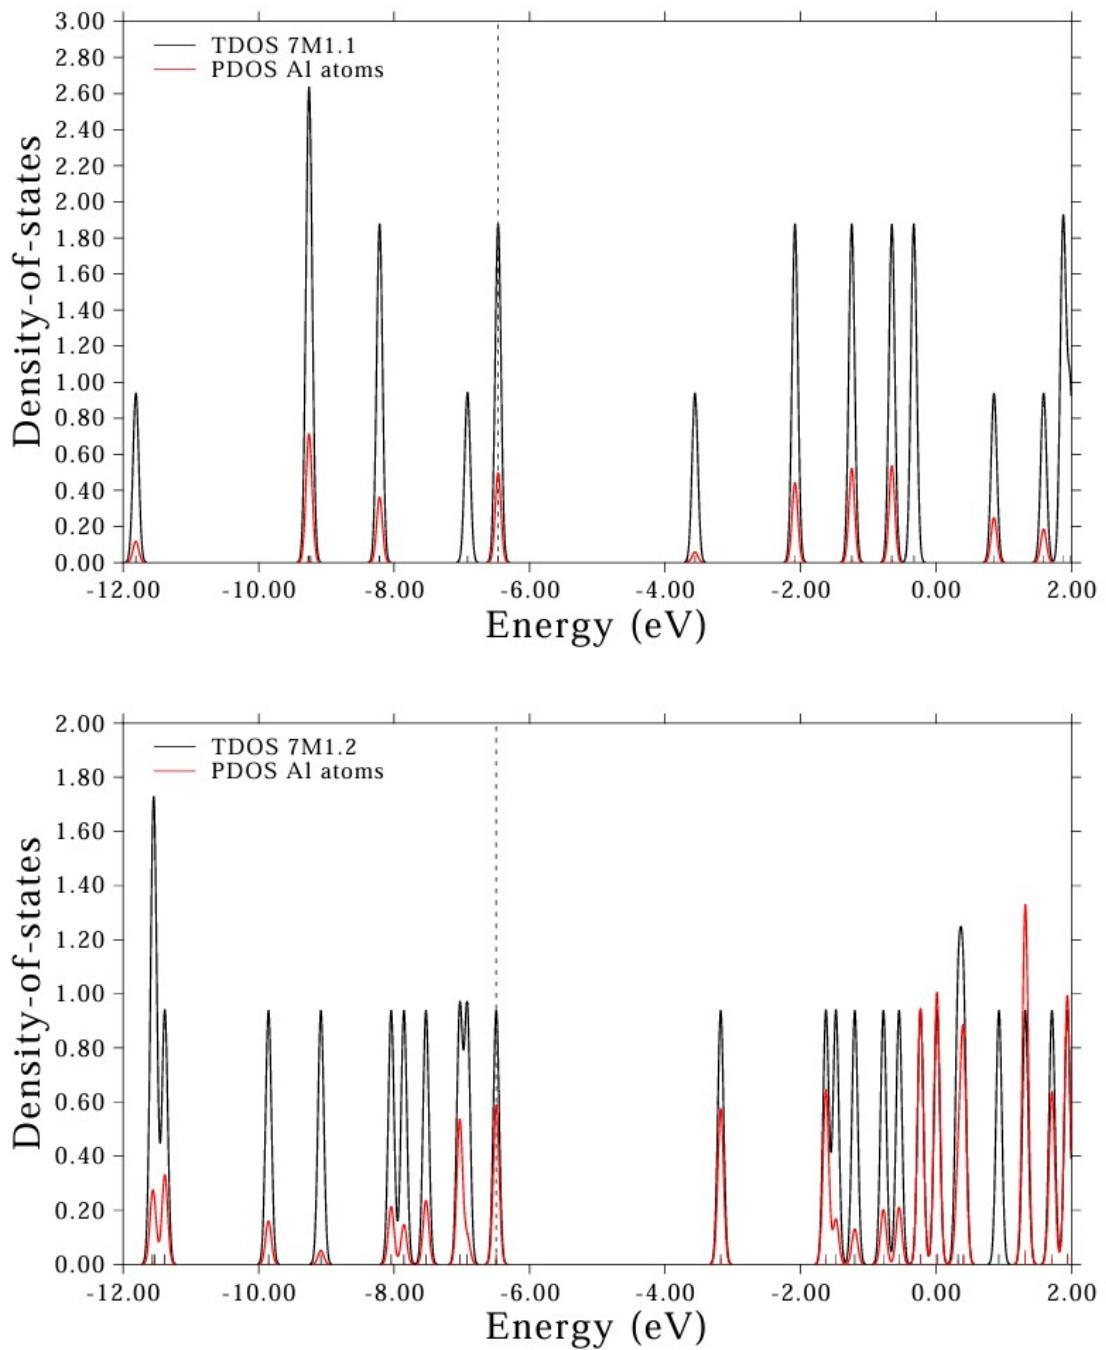

Figure S2. The total and partial density of states (TDOS, PDOS) for 7M2.1 and 7M2.2 clusters. The vertical dashed line corresponds to the Highest Occupied Molecular Orbital (HOMO) energy level.

Table S1. Energy decomposition analysis for the $^2\text{B}_2^{+}/^1\text{B}_7^{-}$, $^2\text{Al}_2^{+}/^1\text{B}_7^{-}$ and $^2\text{Al}_2^{3+}/^1\text{B}_7^{3-}$ fragment interaction, in the respective B_9 and Al_2B_7 clusters. Values in kcal/mol, providing the percentage contribution from stabilizing terms. The Pauli term, accounts for the repulsion between occupied orbitals from fragments. The elstat and orb terms, are related to both electrostatic and orbital interaction nature of the interaction, with the disp term, accounting for London dispersion interactions, via the Grimme DFT-D3(BJ) correction to DFT.
