Contents

1 Reaction Schema	3
2 Temperature Correlation	3
3 Temperature Transfer Learning	4
4 Concentration Correlation	5
5 Concentration Transfer Learning	6
Notes and References	7

1 Reaction Schema

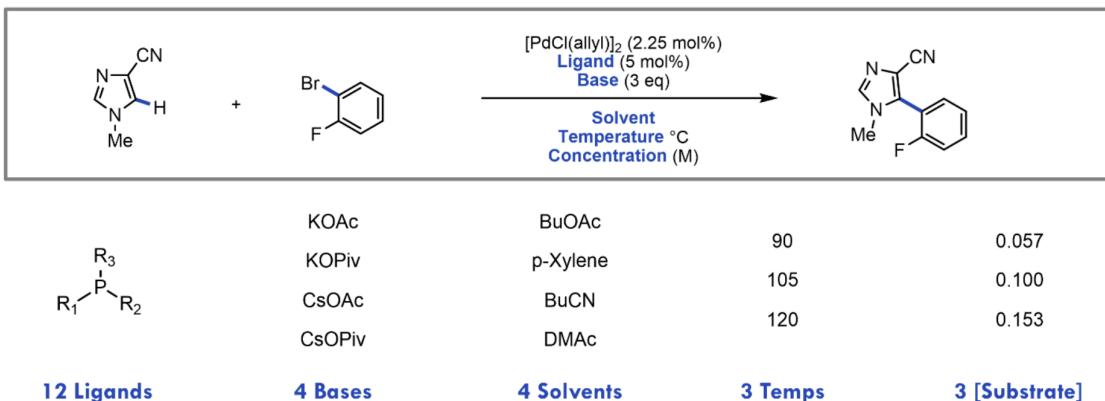

Figure S1 Reaction schema of the direct arylation investigated in this work, adapted from Shields et al¹.

2 Temperature Correlation

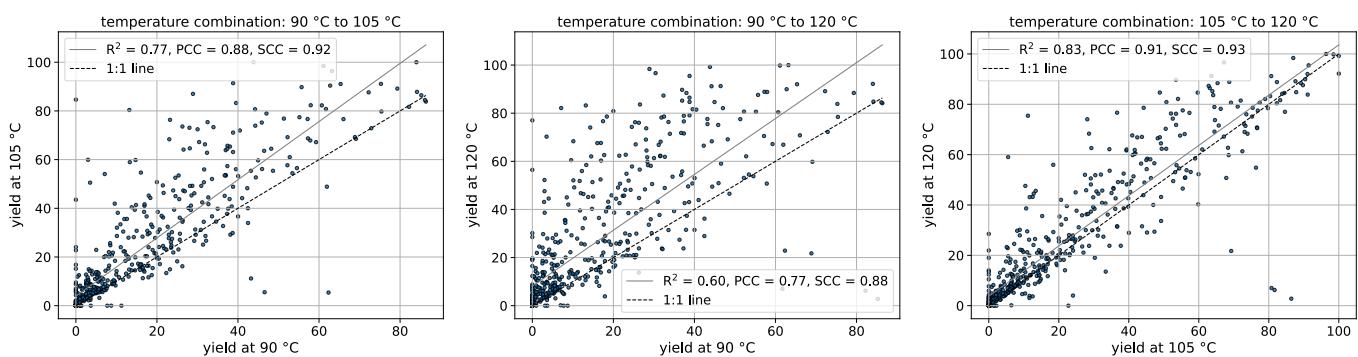

Figure S2 Correlation between data from the three different temperatures for the direct arylation data set¹.

3 Temperature Transfer Learning

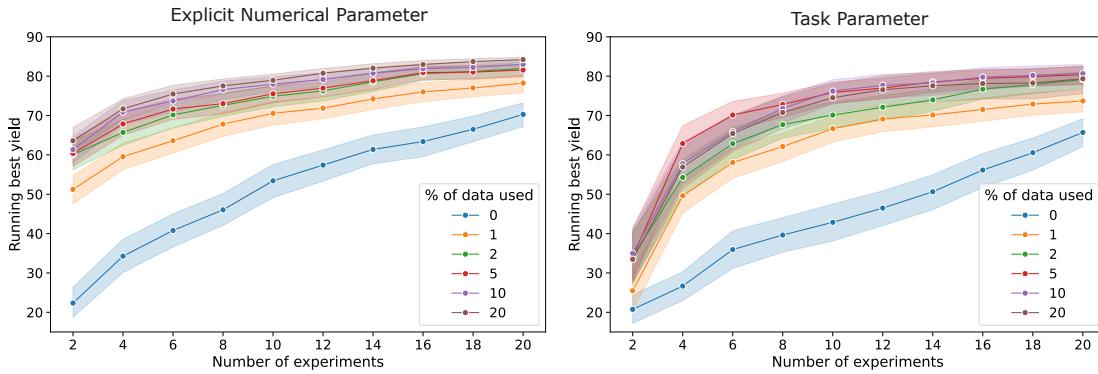

Figure S3 Transfer learning via explicit and implicit (task parameter) modeling for temperature 90°C, incorporating source data at 105°C and 120°C.

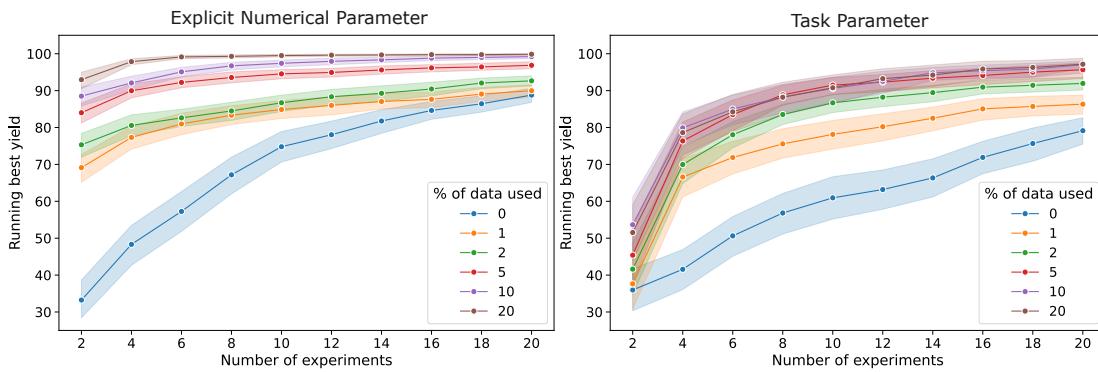

Figure S4 Transfer learning via explicit and implicit (task parameter) modeling for temperature 105°C, incorporating source data at 90°C and 120°C.

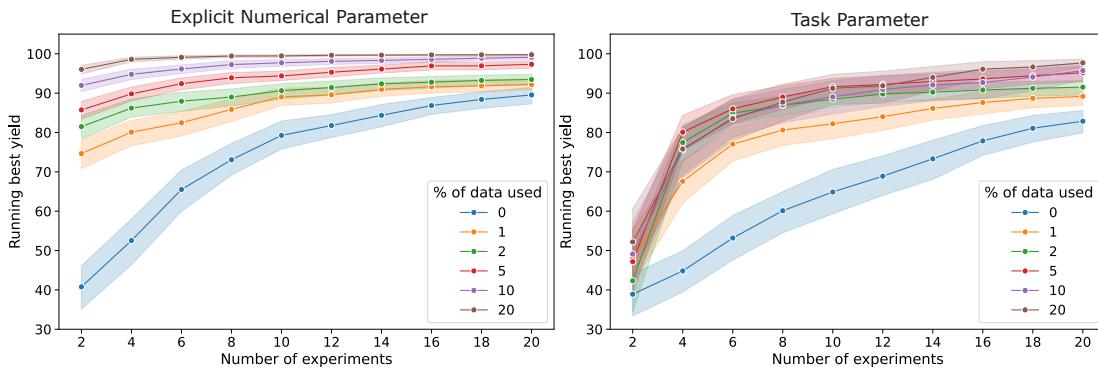

Figure S5 Transfer learning via explicit and implicit (task parameter) modeling for temperature 120°C, incorporating source data at 90°C and 105°C.

4 Concentration Correlation

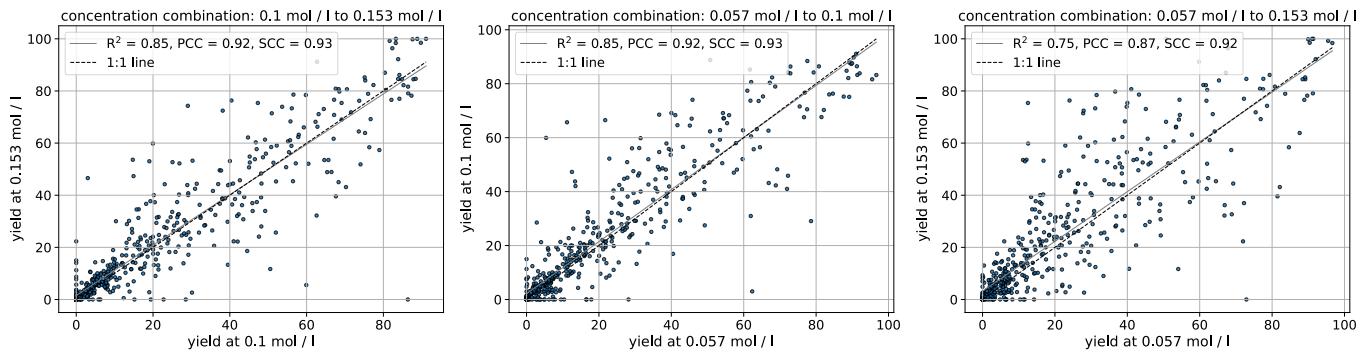

Figure S6 Correlation between data from the three different concentrations for the direct arylation data set¹.

5 Concentration Transfer Learning

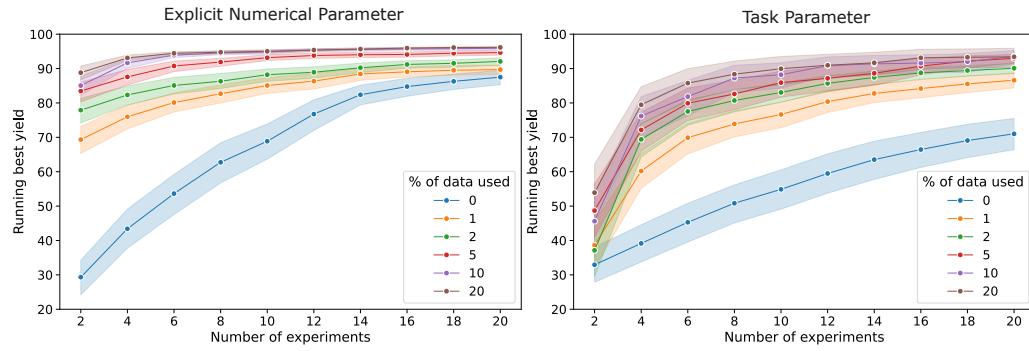

Figure S7 Transfer learning via explicit and implicit (task parameter) modeling for concentration 0.057 mol / l, incorporating source data at 0.1 mol / l and 0.153 mol / l.

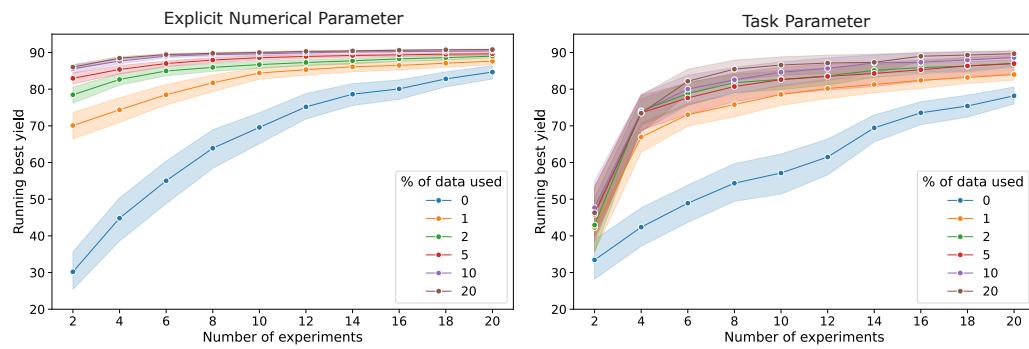

Figure S8 Transfer learning via explicit and implicit (task parameter) modeling for concentration 0.1 mol / l, incorporating source data at 0.057 mol / l and 0.153 mol / l.

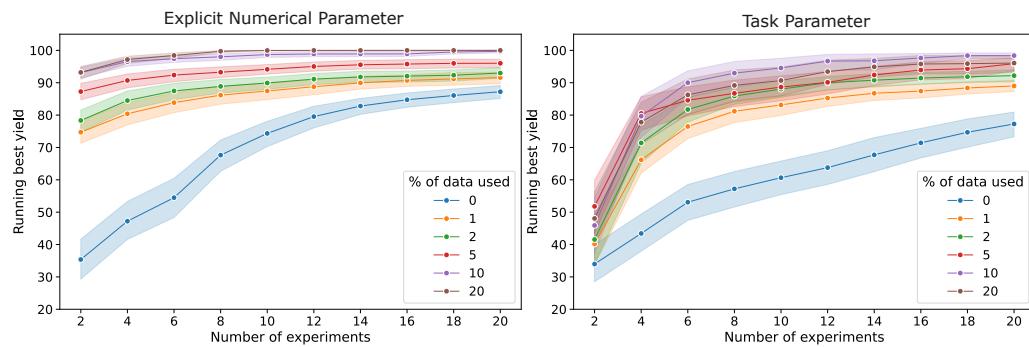

Figure S9 Transfer learning via explicit and implicit (task parameter) modeling for concentration 0.153 mol / l, incorporating source data at 0.057 mol / l and 0.153 mol / l.
