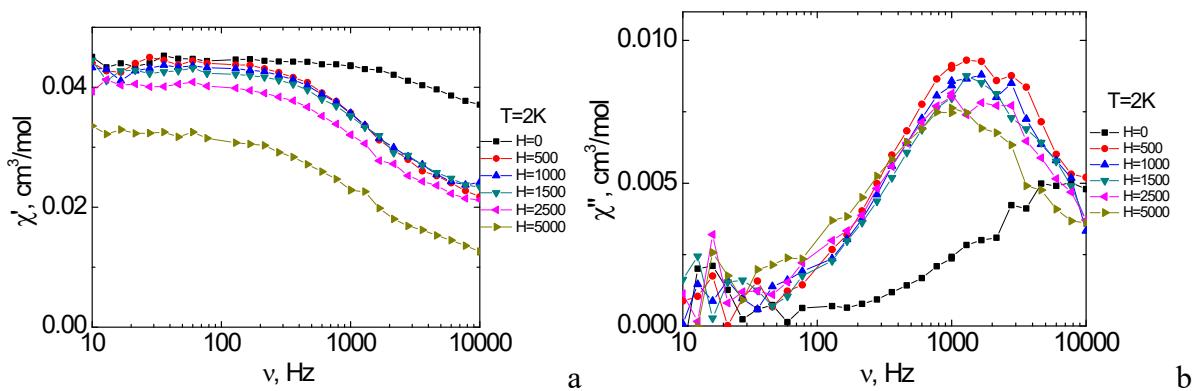

Fig. S1 – Frequency dependences of the real (χ' , a) and imaginary (χ'' , b) parts of the dynamic magnetic susceptibility of complex 1 in the range of magnetic fields from 0 up to 5000 Oe at temperature 2 K. The lines are guides for the eyes

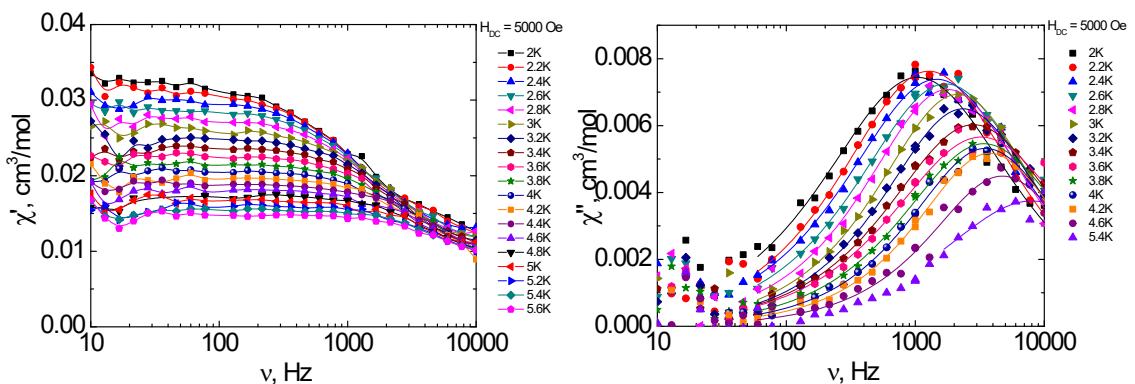

Fig. S2 – Frequency dependences of the real (χ' , a) and imaginary (χ'' , b) parts of the dynamic magnetic susceptibility of complex 1 in the temperature range of 2–5.4 K at a magnetic field strength of 5000 Oe. The lines are a) guides for the eyes; b) the approximation of experimental data by the generalized Debye model.

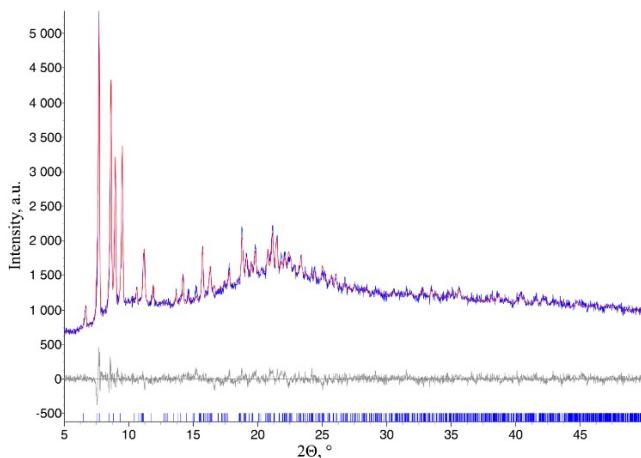

Fig. S3 – The experimental (blue line) and calculated (red line) powder patterns for 2 and their difference (grey curve). Ticks indicated calculated positions of the peaks.
