## 22 CONTENTS

23 **Appendix S1.** Instrumental parameters

24 **Table S1.** Detailed information on chemical name, acronym, CAS, formula,  
25 manufacturer,  $m/z$  and Log Kow of the target QACs.

26 **Table S2.** Weather conditions during the sampling period.

27 **Table S3.** Accurate mass, theoretical mass and MS<sup>2</sup> fragmentations of the target QACs.

28 **Table S4.** Instrument stability assessment (During the sequence run, the relative  
29 standard deviation of the target QACs signals in the QC sample was within 20%,  
30 indicating good instrument stability).

31 **Table S5.** Recoveries and matrix effects of the 16 target QACs in spiked influent and  
32 effluent matrices.

33 **Table S6.** Method detection limits (MDLs) and method quantification limits (MQLs)  
34 of the 16 target QACs.

35 **Table S7.** Daily concentration (ng/L) of the target QACs in influent during the  
36 sampling period.

37 **Table S8.** Daily concentration (ng/L) of the target QACs in effluent during the  
38 sampling period.

39 **Table S9.** Daily removal efficiency (%) of the target QACs during the sampling period.

40 **Table S10.** The real-time population size estimated based on NH<sub>4</sub>-N concentration in  
41 influent.

42 **Table S11.** The estimated median, 95<sup>th</sup> percentile, mean, range and proportion of daily  
43 mass load (mg/1000inh/d) of QACs.

44 **Table S12.** EC<sub>50</sub>/LC<sub>50</sub>, NOEC, AF and PNEC of the target QACs to calculate risk  
45 quotient (RQ) of fish.

46 **Table S13.** EC<sub>50</sub>/LC<sub>50</sub>, NOEC, AF and PNEC of the target QACs to calculate risk  
47 quotient (RQ) of daphnid.

48 **Table S14.** EC<sub>50</sub>/LC<sub>50</sub>, NOEC, AF and PNEC of the target QACs to calculate risk  
49 quotient (RQ) of green algae.

50 **Table S15.** Calculation of EDI for the detected QACs in effluent.

51 **Table S16.** The median concentration, DF, PNEC, persistence, BAF, mobility and  
52 calculated ToxPi score of the target QACs.

53 **Figure S1.** Trends of total QACs concentrations in influent and effluent samples over  
54 the sampling period. (The left and right Y-axis represents total QACs concentrations in  
55 influent and effluent samples, respectively)

56 **Figure S2.** Comparison of QACs concentrations in influent samples during the  
57 infection peak period (PI) and abatement period (AP) (\**p* < 0.05).

58 **Figure S3.** Spearman correlation analysis of the detected QACs with DF > 20% in  
59 influent samples.

60 **Figure S4.** Comparison of target QACs concentrations in influent and effluent samples.

61 **Figure S5.** Comparison of QACs concentrations under different weather conditions  
62 during the sampling period: (A) spearman correlation analysis between QACs  
63 concentrations and temperature (\**p* < 0.05), (B) Kruskal-Wallis test of QACs  
64 concentrations at different weather conditions.

65 **Figure S6.** Mean removal efficiencies of the target QACs.

## 66 **Appendix S1. Instrumental parameters**

67 The Thermo Vanquish ultrahigh-performance liquid chromatography coupled to an  
68 Orbitrap Exploris 480 high resolution mass spectrometer system (UPLC-Orbitrap  
69 HRMS, Thermo Fisher Scientific Inc, Waltham, MA) was used for sample analysis.  
70 Electrospray ionization was operated in positive mode, and full scan MS<sup>1</sup> and data  
71 dependent MS<sup>2</sup> method was performed for data acquisition. A Hypersil GOLD™  
72 VANQUISH™ C18 column (1.9 μm, 2.1 mm i.d. × 100 mm length, ThermoFisher  
73 Scientific) was used for chromatographic separation, and column temperature was set  
74 at 35°C. The mobile phases were (A) methanol and isopropanol (80:20, v/v), and (B)  
75 ultrapure water and isopropanol (80: 20, v/v), both containing 0.1% acetic acid and 10  
76 mM ammonium acetate. The flow rate was set at 0.3 mL/min, and the gradient was 90%  
77 B in 0 – 1 min, 90% – 40% B in 1 – 5 min, 40% – 0% B in 11– 14 min, 0% B in 14 –  
78 15 min, 90% B in 15 – 18 min. The injection volume was 5 μL. The ion spray voltage,  
79 ion transfer tube temperature, vaporizer temperature, sheath gas and auxiliary gas were  
80 3500V, 350 °C, 250 °C, 35 Arb and 10 Arb, respectively. The scan range was 80 – 800  
81 m/z. The Orbitrap resolution was 120,000 FWHM and 15,000 FWHM for full scan MS<sup>1</sup>  
82 and data dependent MS<sup>2</sup> method, respectively. The stepped higher-energy collisional  
83 dissociation (HCD) energy was set at 10%, 30% and 60%.

84 **Table S1.** Detailed information on chemical name, acronym, CAS, formula, manufacturer, *m/z* and Log Kow of the target QACs.

| Chemical name                                 | Acronym      | CAS          | Formula                               | Manufacturer                | <i>m/z</i> | Log <i>Kow</i> <sup>a</sup> |

147 <sup>a</sup>Median concentration, <sup>b</sup>detection frequency, <sup>c</sup>the lowest predicted-no-effect  
 148 concentration among the three trophic organisms, for which the reciprocal was taken  
 149 for processing, <sup>d</sup>persistence, <sup>e</sup>bioaccumulation factor, <sup>f</sup>mobility, potential for  
 150 compounds to migrate over long distances through water flow, which was calculated as  
 151  $1/\log K_{oc}$ .

152

153

154 **Figure S1.** Trends of total QACs concentrations in influent and effluent samples over  
 155 the sampling period. (The left and right Y-axis represents total QACs concentrations in  
 156 influent and effluent samples, respectively)

157

158 **Figure S2.** Comparison of QACs concentrations in influent samples during the  
 159 infection peak period (PI) and abatement period (AP) (\* $p < 0.05$ ).

160

161

162 **Figure S3.** Spearman correlation analysis of the detected QACs with DF > 20% in  
163 influent samples.

164

165

166 **Figure S4.** Comparison of target QACs concentrations in influent and effluent samples.

167  
 168 **Figure S5.** Comparison of QACs concentrations under different weather conditions  
 169 during the sampling period: (A) spearman correlation analysis between QACs  
 170 concentrations and temperature ( $*p < 0.05$ ), (B) Kruskal-Wallis test of QACs  
 171 concentrations at different weather conditions.

172

173 **Figure S6.** Mean removal efficiencies of the target QACs.
