

Fig S1

A

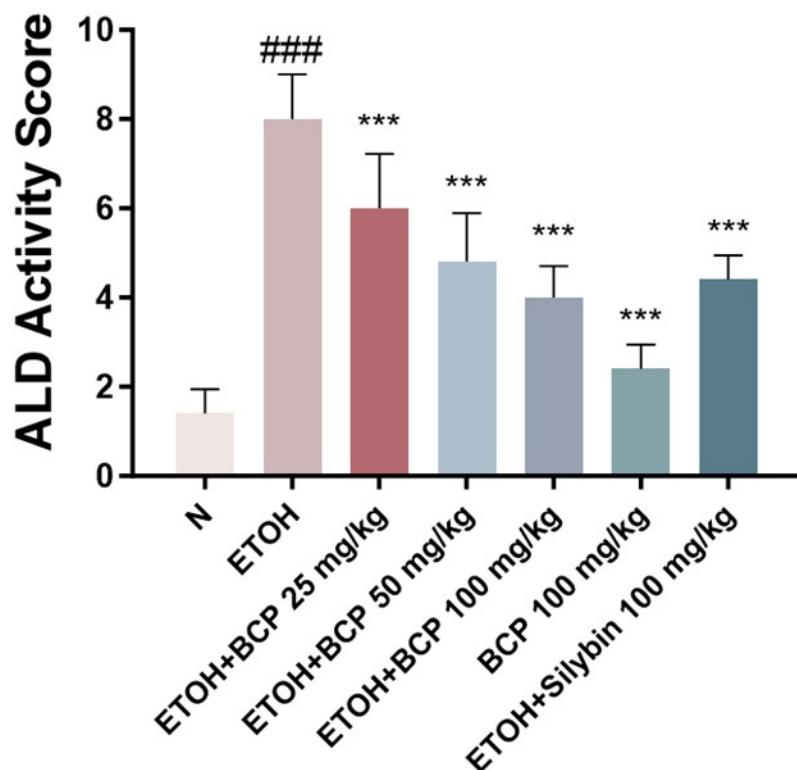

Figure S1. The ALD acitivity score of ASH mice. (A) The ALD activity score includes steatosis, lobular inflammation and hepatocyte ballooning. Scores of 0, 1, 2, 3, and 4 represented increasing levels of injury: none, few, slight, numerous and grievous (0%, <25%, 25–50%, 50–75% and >75% liver tissue involved, respectively). All data are shown as mean  $\pm$  SD, n = 5. # $p < 0.001$  significantly different from Pair-fed group; \*\*\* $p < 0.001$  significantly different from ETOH group.
