**Figure S1.** Impact of the addition of 100 mg L<sup>-1</sup>  $\text{SO}_3^{2-}$  to different generation media containing 1% v v<sup>-1</sup> acetic acid and/or 20 mg L<sup>-1</sup>  $\text{Cu}^{2+}$  on the generation of Cl (5 mg L<sup>-1</sup>) present as  $\text{Cl}^-$  (black bar) or  $\text{ClO}_3^-$  (white bar). Error bars represent the standard deviation ( $n = 3$ ).

**Figure S2.** Impact of 100 mg  $\text{L}^{-1}$   $\text{SO}_3^{2-}$  added to different generation media containing 1%  $\text{v} \text{v}^{-1}$  acetic acid and/or 20 mg  $\text{L}^{-1}$   $\text{Cu}^{2+}$  on the generation of Br (10  $\mu\text{g L}^{-1}$ ) present as  $\text{Br}^-$  (black bar) or  $\text{BrO}_3^-$  (white bar). Error bars represent the standard deviation (n = 3).

**Figure S3.** Impact of 100 mg L<sup>-1</sup> SO<sub>3</sub><sup>2-</sup> added to different generation media containing 1% v v<sup>-1</sup> acetic acid and/or 20 mg L<sup>-1</sup> Cu<sup>2+</sup> on the generation of I (2 µg L<sup>-1</sup>) present as I<sup>-</sup> (black bar) or IO<sub>3</sub><sup>-</sup> (white bar). Error bars represent the standard deviation (n = 3).
