Pierce, FL 34949, United States; ^d Program in Cancer and Stem Cell Biology, Duke-NUS Medical School, Singapore, 169857, Singapore.

Table of Contents

Fig. S1. Homology model of cathepsin-E showing the docked structure of grassystatin G.....	3
Fig. S2. Structure of Pepstatin A bound to Cathepsin D (PDBID: 1LYB)	4
Fig. S3. Diagrams of persistent interactions between Grassystatin G and Cathepsin D (A), and Cathepsin E (B), during the last 400 ns of simulations.....	5
Fig. S4. Analysis of the interactions between Grassystatin G and Cathepsin D (A) and Cathepsin E (B), during the last 400 ns of simulations.....	6
Fig. S5. Diagrams of persistent interactions between Grassystatin C and Cathepsin D (A), and Cathepsin E (B), during the last 400 ns of simulations.....	7
Fig. S6. Analysis of the interactions between Grassystatin C and Cathepsin D (A) and Cathepsin E (B), during the last 400 ns of simulations.....	8
Table S1. Most persistent interactions between grassystatin G and Cathepsins D and E.....	9
Table S2. Most persistent interactions between Grassystatin C and Cathepsins E and D.....	10
Fig. S7. ¹ H NMR spectrum (600 MHz, DMSO- <i>d</i> ₆) of natural product grassystatin G (1)	11
Fig. S8. HSQC spectrum (800 MHz, DMSO- <i>d</i> ₆) of natural product grassystatin G (1)	12
Fig. S9. COSY spectrum (600 MHz, DMSO- <i>d</i> ₆) of natural product grassystatin G (1)	13
Fig. S10. HMBC spectrum (800 MHz, DMSO- <i>d</i> ₆) of natural product grassystatin G (1).....	14
Fig. S11. TOCSY spectrum (600 MHz, DMSO- <i>d</i> ₆) of natural product grassystatin G (1).....	15
Fig. S12. ROESY spectrum (600 MHz, DMSO- <i>d</i> ₆) of natural product grassystatin G (1).....	16
Fig. S13. ¹ H NMR spectrum (600 MHz, DMSO- <i>d</i> ₆) of compound 4	17
Fig. S14. ¹³ C NMR spectrum (150 MHz, DMSO- <i>d</i> ₆) of compound 4	18
Fig. S15. ¹ H NMR spectrum (600 MHz, DMSO- <i>d</i> ₆) of compound 6	19
Fig. S16. ¹³ C NMR spectrum (150 MHz, DMSO- <i>d</i> ₆) of compound 6	20

Fig. S17. ^1H NMR spectrum (600 MHz, $\text{DMSO-}d_6$) of compound 9	21
Fig. S18. ^{13}C NMR spectrum (150 MHz, $\text{DMSO-}d_6$) of compound 9	22
Fig. S19. ^1H NMR spectrum (600 MHz, $\text{DMSO-}d_6$) of compound 11	23
Fig. S20. ^{13}C NMR spectrum (150 MHz, $\text{DMSO-}d_6$) of compound 11	24
Fig. S21. ^1H NMR spectrum (600 MHz, $\text{DMSO-}d_6$) of synthetic grassystatin G	25
Fig. S22. ^{13}C NMR spectrum 150 MHz, $\text{DMSO-}d_6$) of synthetic grassystatin G	26
Fig. S23. Comparison of ^1H NMR spectrum of synthetic grassystatin G and natural grassystatin G in $\text{DMSO-}d_6$ (600 MHz).	27
Fig. S24. 1D selective gradient NOE spectrum of synthetic grassystatin G with irradiation of signal at 8.0 ppm	28
Fig. S25. 1D selective gradient NOE spectrum of synthetic grassystatin G with irradiation of signal at 6.94 ppm	29
Fig. S26. 1D selective gradient NOE spectrum of synthetic grassystatin G with irradiation of signal at 4.35 ppm	30

Fig. S1. Homology model of cathepsin-E showing the docked structure of grassystatin G. Residues in dark blue are the same as in the template (cathepsin-D, PDBID: 1LYB). Residues in light blue have been mutated, and residues in red were not present in the template and needed to be reconstructed.

Fig. S2. Structure of Pepstatin A bound to Cathepsin D (PDBID: 1LYB). Pepstatin is shown in ball-and-stick model, and cathepsin residues in thick tubes. The statin unit and Asp33/231 are highlighted.

Fig. S3. Diagrams of persistent interactions between Grassystatin G and Cathepsin D (A), and Cathepsin E (B), during the last 400 ns of simulations. Only interactions present over 30% or more of the total time are shown. The residue colors represent: Green: hydrophobic; blue: polar, and red: negatively charged residues, and grey clouds indicate solvent exposure. Arrows indicate hydrogen bonds from donor to acceptor.

Fig. S4. Analysis of the interactions between Grassystatin G and Cathepsin D (A) and Cathepsin E (B), during the last 400 ns of simulations. The bar colors represent the types of interactions. Green: hydrogen bond; blue: water bridges, purple: hydrophobic interactions; and red: ionic interactions.

7

Fig. S6. Analysis of the interactions between Grassystatin C and Cathepsin D (A) and Cathepsin E (B), during the last 400 ns of simulations. The bar colors represent the types of interactions. Green: hydrogen bond; blue: water bridges, purple: hydrophobic interactions; and red: ionic interactions.

Table S1. Most persistent interactions between grassystatin G and Cathepsins D and E.*

CathD Residue	CathE Residue	Interactions in CathD			Interactions in CathE			Difference (E-D)		
		HB	WB	HP	HB	WB	HP	HB	WB	HP
Asp33	Asp	33	0	0	0	0	0	-33	0	0
His77	Gln	0	330		3	437	0	3	107	0
Tyr78	Tyr	0	0	267	0	0	174	0	0	-93
Gly79	Gly	792	3	0	785	0	0	-7	-3	0
Ser80	Thr	304	16	0	94	291	0	-210	275	0
