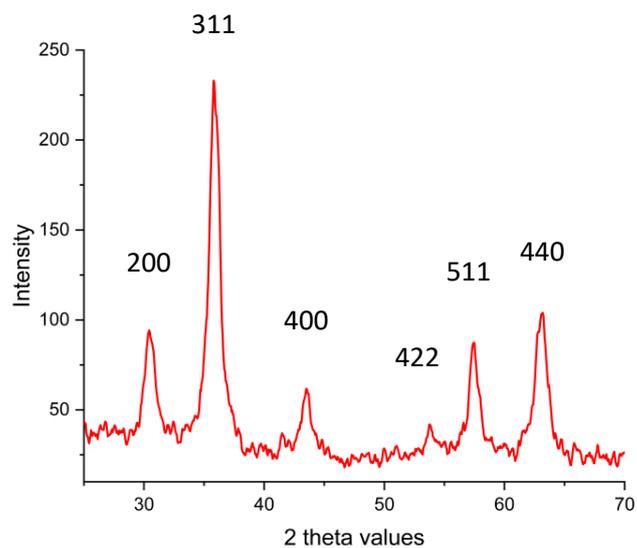

Figure 7. XRD pattern of Fe_3O_4 . The diffraction peak positions match well with JCPDS 00-003-0863 for magnetite.

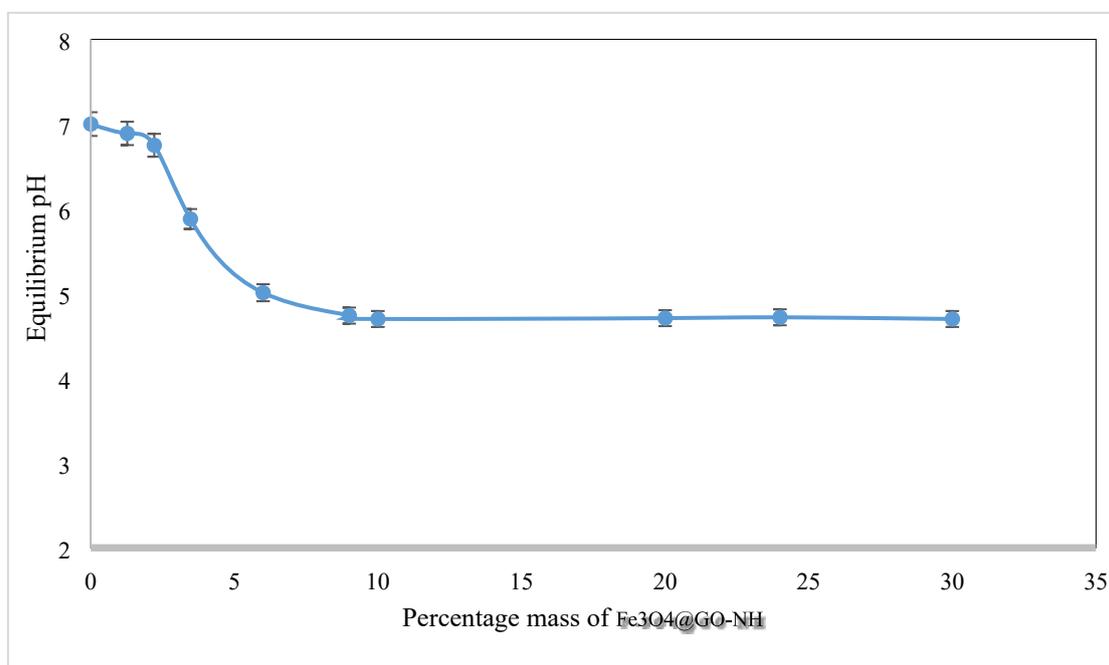

Figure 8. Influence of $\text{Fe}_3\text{O}_4@GO-NH$ mass fraction on the equilibrium pH of the suspension in 0.01 M KCl at 25 ± 2 °C. The plateau at pH 4.70 represents the PZC value. Error bars indicate standard deviation of the mean ($\pm SD$).

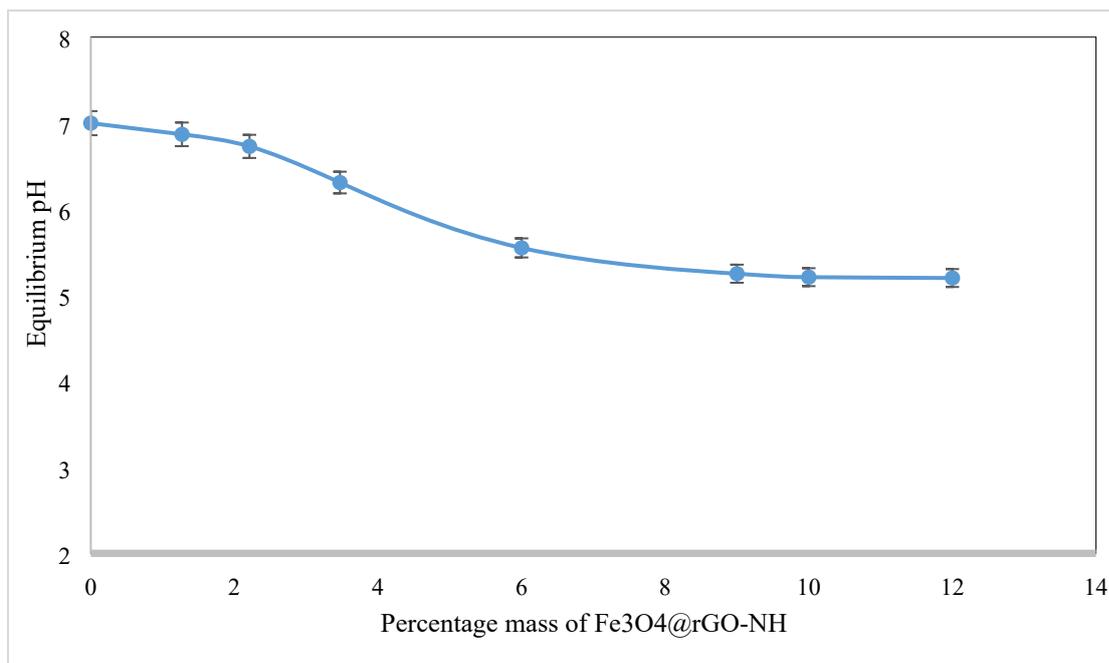

Figure 9. Influence of Fe₃O₄@rGO-NH mass fraction on the equilibrium pH of the suspension in 0.01 M KCl at 25 ± 2 °C. The plateau at pH 5.21 represents the PZC value. Error bars indicate standard deviation of the mean (±SD).
