**SI Fig.S1.** Additional cryo-TEM images for 1 wt% native pH samples: (a) C<sub>16</sub>-KFK, (b) C<sub>16</sub>-KWK, (c) C<sub>16</sub>-KYK.

**SI Fig.S2.** SAXS data at other pH values (a) C<sub>16</sub>-KFK, (b) C<sub>16</sub>-KWK, (c) C<sub>16</sub>-KYK.

**SI Fig.S3.** ThT emission fluorescence spectra at concentrations (wt%) indicated, at native pH.

(a) C<sub>16</sub>-KFK, (b) C<sub>16</sub>-KWK, (c) C<sub>16</sub>-KYK.

**SI Fig.S4.** ThT fluorescence peak intensity ( $I/I_0$ , where  $I_0$  is the peak intensity for the ThT only solution) assay to determine critical aggregation concentration (CAC) of the three lipopeptides, as indicated, at pH 8.

**SI Fig.S5.** CD spectra for 0.25 wt% samples, as indicated at pH = 8.

**Table S1.** Parameters extracted from the fitting of the SAXS data for 1 wt% solutions at pH 8.<sup>a</sup>

<sup>a</sup> Data fitted using the software SASfit.<sup>1, 2</sup><sup>b</sup> Fixed Parameter<sup>c</sup> Additional overall scale factor applied to fit data

**Key: Gaussian bilayer:** layer thickness  $r_H$  (Gaussian polydispersity  $\Delta r_H$ ), scattering contrast of outer (headgroup) layers  $\rho_H$ , and core (lipid chain) layer  $\rho_C$ , Gaussian widths  $\sigma_C$  and  $\sigma_H$  of core and headgroup layers respectively,  $D$  diameter (width) of layer system (when  $D \gg t$  as here, it acts as a scaling parameter for the form factor). **Long cylindrical shell:**  $R$  core radius (Gaussian polydispersity  $\Delta t$ ),  $s$  shell thickness, scattering contrasts of core  $\rho_{\text{core}}$ , shell  $\rho_{\text{shell}}$  and solvent  $\rho_{\text{solv}}$ ,  $L$  length. **Background:** constant background,  $C$ . Weightings for two-component form factors,  $w_1$ ,  $w_2$ .

**Table S2.** Calculated pKa values at pH 8 from H<sup>++</sup>.<sup>3, 4</sup>

| <b>Moiety</b> | <b>WKK</b> | <b>KWK</b> | <b>YKK</b> | <b>KYK</b> |
|---------------|------------|------------|------------|------------|
| N terminus    | 6.7        | 6.7        | 6.7        | 6.8        |
| Tyr           |            |            | 9.2        | 9.5        |
| Lys-N         | 10.1       | 10.4       | 10.6       | 10.3       |
| Lys-C         | 11.5       | 11.6       | 11.9       | 11.7       |
| C terminus    | 1.9        | 1.8        | 1.8        | 1.9        |

Lys-N denotes N-terminal side lysine and Lys-C the C-terminal one.
