

**Supplementary data 1**

Set up for BC aqueous nutrient release experiments

## **Supplementary data 2**

Preparation of standard nitrate ( $\text{NO}_3^-$ ) and ammonium ( $\text{NH}_4^+$ ) solutions from ammonium nitrate ( $\text{NH}_4\text{NO}_3$ ) salt.

1 mole of  $\text{NH}_4\text{NO}_3$  has a molar mass of **80.043g/mol**

Therefore:

**80.043g** of  $\text{NH}_4\text{NO}_3$  contains **17.994g** of  $\text{NH}_4^+$  and **62.049g** of  $\text{NO}_3^-$ .

### To prepare a standard solution of $\text{NO}_3^-$

**62.049g** of  $\text{NO}_3^-$  will be in **80.043g** of  $\text{NH}_4\text{NO}_3$

1g of  $\text{NO}_3^-$  will be in 1.29g of  $\text{NH}_4\text{NO}_3$

0.1g (ie 100mg) of  $\text{NO}_3^-$  will be in 0.129g of  $\text{NH}_4\text{NO}_3$

Hence to prepare **100mg/L** of  $\text{NO}_3^-$  solution, weigh **0.129g** of  $\text{NH}_4\text{NO}_3$  salt and dissolve in 1 liter (**1,000ml**) de-ionized water.

(**Note:** to prepare 100mg/L in **100ml** of de-ionized water, then weigh **0.0129g** of  $\text{NH}_4\text{NO}_3$ ).

Then, from this stock standard  $\text{NO}_3^-$  solution, **1:10** and **1:100** dilutions can be made to prepare solutions of **10mg/L** and **1mg/L** respectively.

### To prepare a standard solution of $\text{NH}_4^+$

**17.994g** of  $\text{NH}_4^+$  will be in **80.043g** of  $\text{NH}_4\text{NO}_3$

1g of  $\text{NH}_4^+$  will be in 4.448g of  $\text{NH}_4\text{NO}_3$

0.1g (ie 100mg) of  $\text{NH}_4^+$  will be in 0.4448g of  $\text{NH}_4\text{NO}_3$

Hence to prepare **100mg/L** of  $\text{NH}_4^+$  solution, weigh **0.4448g** of  $\text{NH}_4\text{NO}_3$  salt and dissolve in 1 liter (**1,000ml**) de-ionized water.

(**Note:** to prepare 100mg/L in **100ml** of de-ionized water, then weigh **0.04448g** of  $\text{NH}_4\text{NO}_3$ ).

Then, from this stock standard  $\text{NH}_4^+$  solution, **1:5** dilution can be made to prepare a solution of **20mg/L**.

### Supplementary data 3

**Table showing statistical analysis of nutrient concentrations (ppm) in leachate samples ( $\alpha=0.05$ )**
