Contents

1. Synthesis of the catalysts (Page S2)
 - 1.1 Synthesis of {Mo₁₃₂-Ac⁻}
 - 1.2 Synthesis of {Mo₁₃₂-SO₄²⁻}
2. PXRD characterization of the catalysts {Mo₁₃₂-Ac⁻} and {Mo₁₃₂-SO₄²⁻} (Page S2)
3. GC-FID analysis of reactants and products (Page S3)
4. XPS characterization of {Mo₁₃₂-SO₄²⁻} (Page S3)
5. References (Page S3)

1. Synthesis of the catalysts

1.1 $\{\text{Mo}_{132}\text{-Ac}^-\}$ was synthesized according to reference [1]: $\text{N}_2\text{H}_4\cdot\text{H}_2\text{SO}_4$ (0.8 g, 6.1 mmol) was added to a solution of $(\text{NH}_4)_6\text{Mo}_7\text{O}_{24}\cdot 4\text{H}_2\text{O}$ (5.6 g, 4.5 mmol) and $\text{CH}_3\text{COONH}_4$ (12.5 g, 162.2 mmol) in H_2O (250 mL). The solution was then stirred for 10 min (color change to blue-green) and 50% CH_3COOH (83 mL) was subsequently added. The reaction solution, now green, was stored in an open 500 mL Erlenmeyer flask at 20 °C without further stirring (fume hood; slow color change to dark brown). After 4 d the precipitated red-brown crystals were filtered off over a glass frit (D2), washed with 90% ethanol, ethanol, and diethyl ether, and finally dried in air. Yield: 3.3 g (52% based on molybdate).

1.2 $\{\text{Mo}_{132}\text{-SO}_4^{2-}\}$ was synthesized according to reference [2]: A solution of $\{\text{Mo}_{132}\text{-Ac}^-\}$ (5.0 g, 0.17 mmol) and $(\text{NH}_4)_2\text{SO}_4$ (20.0 g, 151 mmol) in H_2O (400 mL) was adjusted with 16% HCl (about 20 mL) to $\text{pH} \approx 1$ and heated under reflux for 2 h in an oil bath (ca. 125 °C) without stirring. The hot solution was purified by filtration and the dark-brown filtrate stored at 20 °C in an open 600 mL beaker (wide necked) for crystallization. After one week the dark-brown crystals were collected by filtration, washed quickly with ice-cold 2-propanol and dried in air. Yield: 4.3 g (89% based on Mo).

2. PXRD characterization of the catalysts $\{\text{Mo}_{132}\text{-Ac}^-\}$ and $\{\text{Mo}_{132}\text{-SO}_4^{2-}\}$

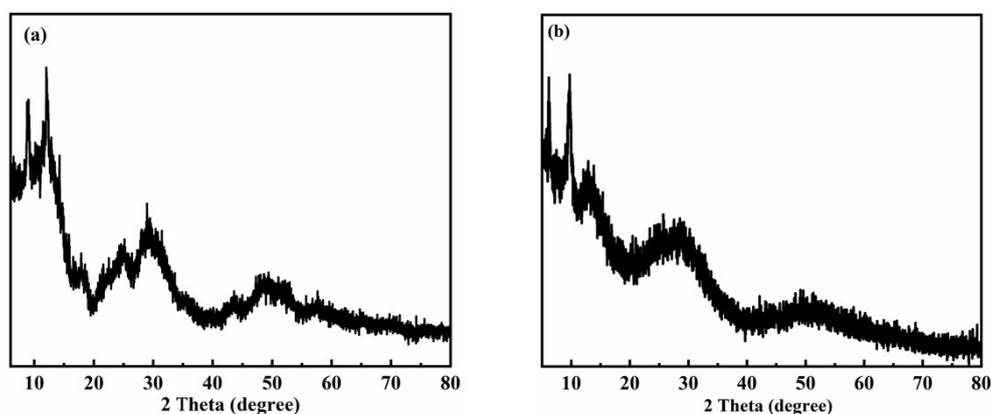

Figure S1 PXRD patterns of $\{\text{Mo}_{132}\text{-Ac}^-\}$ (a) and $\{\text{Mo}_{132}\text{-SO}_4^{2-}\}$ (b).

3. GC-FID analysis of reactants and products

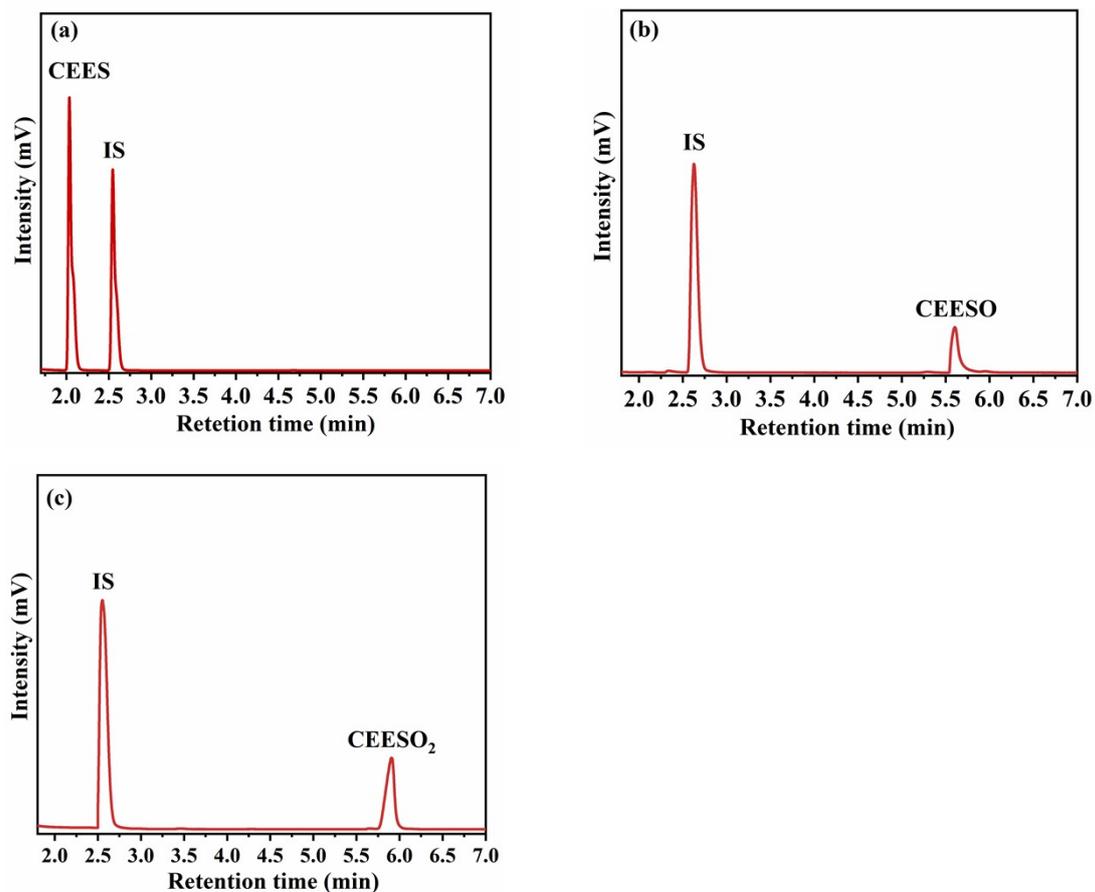

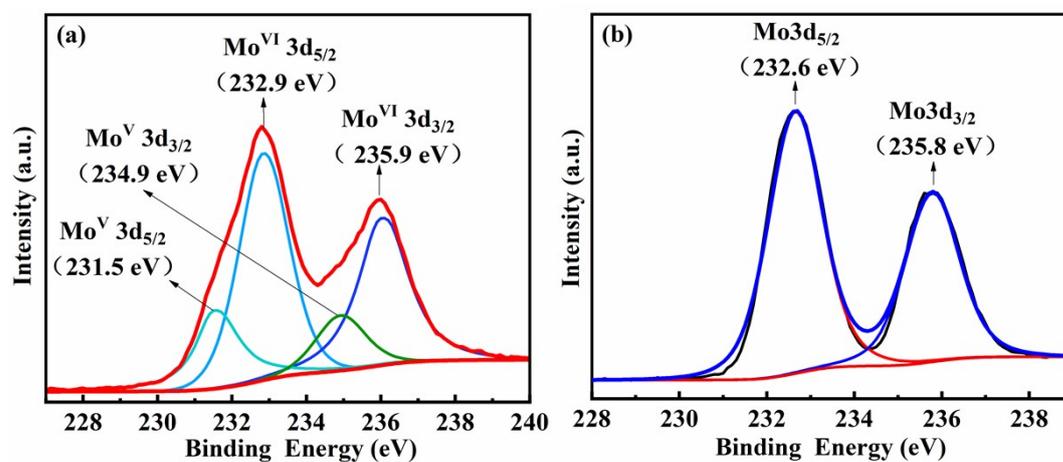

Figure S2 GC-FID signals of CEES and 1,3-dichlorobenzene as internal standard (a), of CEESO and 1,3-dichlorobenzene as internal standard (b), and of CEESO₂ and 1,3-dichlorobenzene as internal standard (c).

4. XPS characterization of {Mo₁₃₂-SO₂-4}

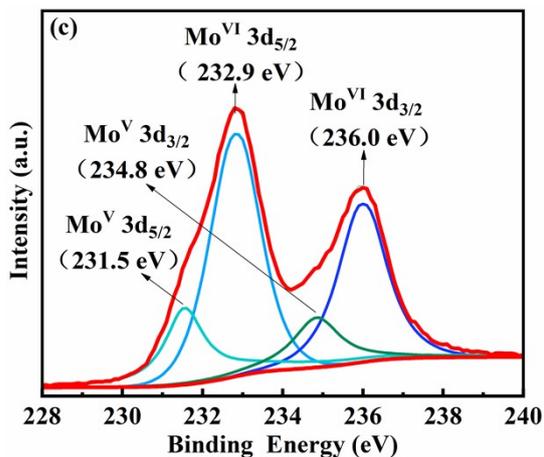

Figure S3 XPS of Mo3d of {Mo₁₃₂-SO₂- 4}(a), Mo3d of {Mo₁₃₂-SO₂- 4} after adding H₂O₂ (b), Mo3d of {Mo₁₃₂-SO₂- 4} after adding H₂O₂ and substrate CEES (c)
