1. PVC iodination

a. Nuclear Magnetic Resonance

Supplementary Figure S1 – ^1H NMR spectra of a) PVC and b) PVC iodinated via phase-transfer catalysis for 24h. The remaining TBAB in b) is designated by asterisks (*).

b. Fourier Transform Infrared Spectroscopy

Supplementary Figure S2 – FT-IR of PVC and modified PVC samples iodinated via the Conant-Finkelstein reaction (C-F) or phase transfer catalysis (PTC) for 6, 17, 24, or 48 hours.

c. Thermogravimetric Analysis

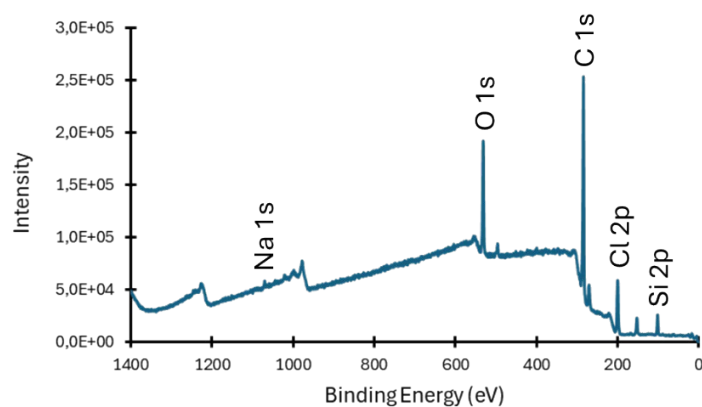

Supplementary Figure S3 – TGA of PVC and modified PVC samples iodinated via the Conant-Finkelstein reaction (C-F) or phase transfer catalysis (PTC) for 6, 17, 24, or 48 hours.

d. Size Exclusion Chromatography

Supplementary Figure S4 – SEC traces of PVC and modified PVC samples iodinated via the Conant-Finkelstein reaction (C-F) or phase transfer catalysis (PTC) for 6, 17, 24, or 48 hours.

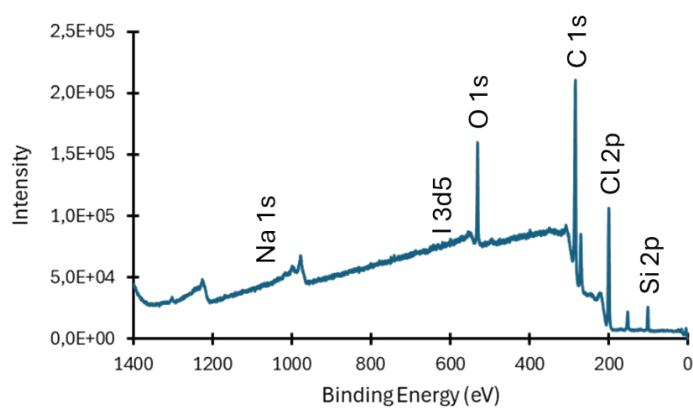

e. X-ray Photoelectron Spectroscopy

Supplementary Figure S5 – XPS spectrum of PVC.

Supplementary Figure S6 – XPS spectrum of PVC iodinated via the Conant-Finkelstein reaction.

Supplementary Figure S7 – XPS spectrum of PVC iodinated via phase transfer catalysis for 6 hours.

Supplementary Figure S8 – XPS spectrum of PVC iodinated via phase transfer catalysis for 17 hours.

Supplementary Figure S9 – XPS spectrum of PVC iodinated via phase transfer catalysis for 24 hours.

f. Differential Scanning Calorimetry

Supplementary Figure S10 – DSC of PVC and modified PVC samples iodinated via phase transfer catalysis (PTC) for 6, 17, 24, or 48 hours.

g. **Supplementary Table S1** – Summary of physicochemical and thermal properties of pristine and iodinated PVC samples.

<i>Method</i>	<i>t</i> (h)	<i>MDT</i> (°C)	\bar{M}_n (g/mol)	<i>C 1s</i> (at%)	<i>Cl 2p</i> (at%)	<i>I 3d5</i> (at%)	<i>Na 1s</i> (at%)	<i>T_g</i> (°C)	<i>Contact angle</i> (°)
1	PVC	0	275	63,500	73.52	6.53	0	86	85.6 ± 1.7
2	C-F	24	243	74,000	67.30	19.23	0.10	/	/
3	PTC	6	200	77,400	69.78	12.48	0.05	56	86.8 ± 1.1
4	PTC	17	206	71,500	70.29	12.14	0	53	85.5 ± 2.3
5	PTC	24	189	70,400	69.87	15.79	0.16	52	85.9 ± 1.6
6	PTC	48	213	59,100	67.47	17.37	0.23	50	83.4 ± 4.3

2. CO₂BAM characterization

a. Nuclear Magnetic Resonance

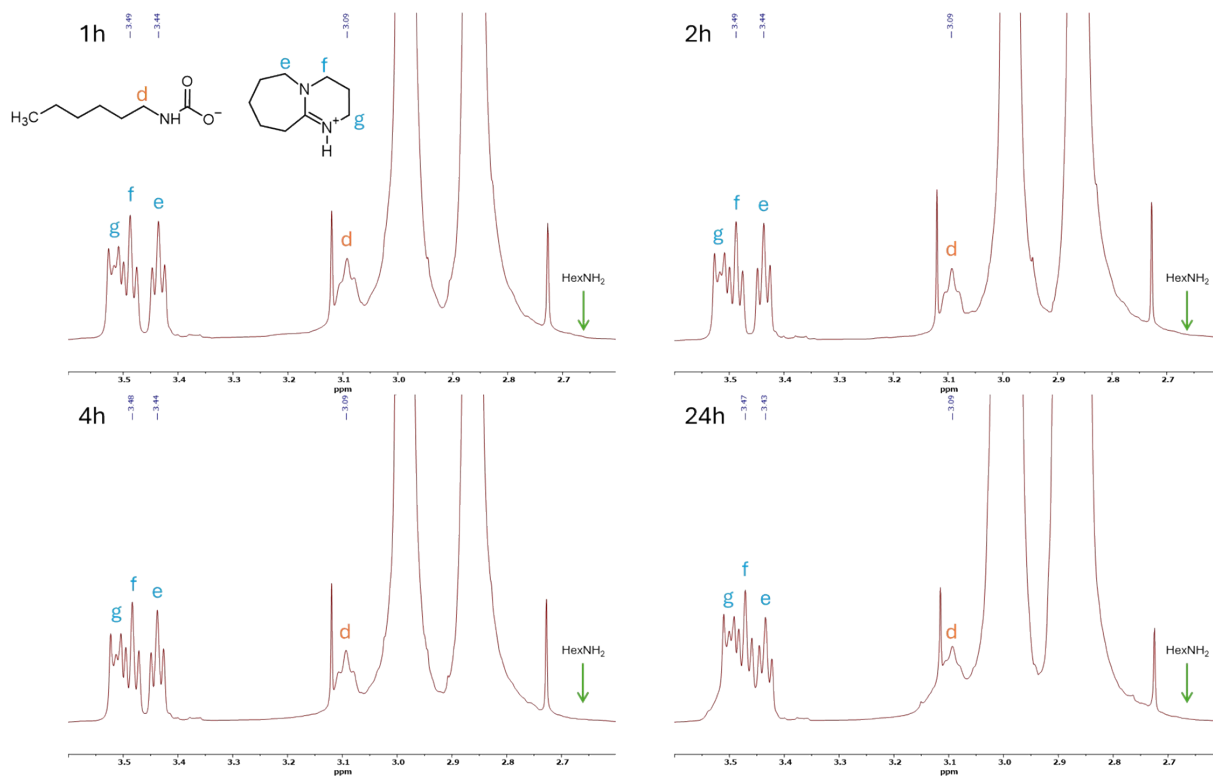

Supplementary Figure S11 – ¹H NMR spectrum of the amine only-based CO₂BAM.

Supplementary Figure S12 – ¹H NMR spectrum of the hexylamine and DBU-based CO₂BAM.

Supplementary Figure S13 – ¹H NMR spectrum of the hexylamine and TBD-based CO₂BAM.

Supplementary Figure S14 – Stability of DBU-based CO₂BAM of 1-hexylamine in solution in DMF studied by ¹H NMR spectroscopy. The green arrow indicates where free hexylamine should appear in case of CO₂BAM degradation.

b. Thermogravimetric Analysis

Supplementary Figure S15 – TGA thermograms of pristine 1-hexylamine, and hexylamine/DBU and hexylamine/TBD-based CO₂BAMs.

3. Reaction between iodinated PVC and DBU-based CO₂BAM – Product characterization

Supplementary Figure S16 – FT-IR spectra of pristine PVC and the product of reaction between PVC-I and the DBU-based CO₂BAM of 1-hexylamine.

Supplementary Figure S17 - ¹H NMR spectrum of the reaction product between PVC-I and the DBU-based CO₂BAM of 1-hexylamine.
