

## SUPPORTING INFORMATION

### Carbon dot-modified silver nanoparticle electrochemical sensor for ultrasensitive detection of total malachite green and leucomalachite green residues in fish.

**Fig. S1** A) Cyclic voltammograms of AgCQDs/Au in the presence of (a) 10<sup>-5</sup> M; (b) 10<sup>-4</sup> M; (c) 10<sup>-3</sup> M; (d) 10<sup>-2</sup> M and (e) 10<sup>-1</sup> M of Na<sub>2</sub>SO<sub>4</sub> with 2.5 ng/mL of each MG and LMG in their mixture at 50 mV/s. B) Intensity of the oxidation current peak as a function of Na<sub>2</sub>SO<sub>4</sub> concentration.

**Fig. S2:** A) Cyclic voltammograms recorded in  $10^{-4}$  M  $\text{Na}_2\text{SO}_4$  solution at 50 mV/s in the presence of 2.5 ng/mL of each MG and LMG in their mixture at different immersion times of the Au electrode in the colloidal solution of AgCDs. B) Peak current intensity as a function of immersion time (a) 5, (b) 10 and (c) 15 min. C) Cyclic voltammograms recorded in  $10^{-4}$  M  $\text{Na}_2\text{SO}_4$  solution at 50 mV/s in the presence of 2.5 ng/mL of each MG and LMG in the mixture for different number of drops of colloidal AgCDs solution on the surface of the Au electrode. D) Peak current intensity as a function of the number of droplets deposited from (a) 1 drop to (h) 8 drops. E) Superposition of the voltammograms obtained for (a) 10 min of immersion and (b) deposition of 8 drops.

**Fig. S3** A) Cyclic voltammograms of the AgCDs/Au electrode obtained from deposition of a) one layer, b) two layers c) three layers and d) four layers of AgCDs on the Au electrode in a  $10^{-4}$  M  $\text{Na}_2\text{SO}_4$  solution at 50 mV/s containing 2.5 ng/mL of each MG and LMG in the mixture. B) Peak current intensity of the MG and LMG mixture oxidation as a function of the number of layers.

**Fig. S4** Stability study of the AgCDs/Au electrode.

**Table S1** Recovery using the fabricated sensor (n=3)

Added (ng/mL)	Found (pg/mL) <sup>a</sup>	recovery (%)
6	5.88	98±1.5
10	9.92	99.2±2
15	14.93	99.5±3.6
25	24.96	99.4±5.7
35	34.96	99.8±2.1
45	44.92	99.8±6.0
55	54.95	99.9±8.1

<sup>a</sup> Average value of recovered MG concentration.

**Table S2** Recovery rate of 10 pg/mL MG in the presence of 100 pg/mL of the selected interfering compounds (n=3).

Compounds	C(pg/mL) <sup>a</sup>	C(pg/mL) <sup>b</sup>	Recovery (%)
MG	10	10	100
CAP	10	9.98	99.8

ARTICLE			Journal Name
p-DAP	10	9.98	99.8
Bovine serum albumin	10	9.95	99.5
