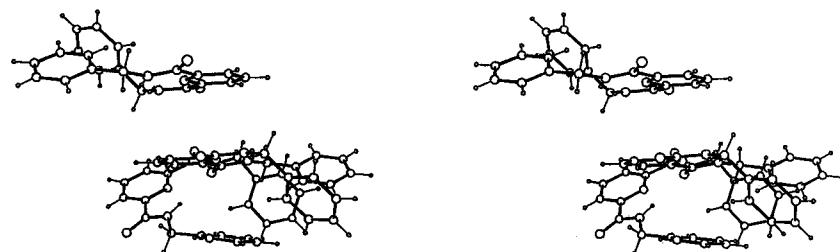

Figure S1 Stereoview of ligands **L8** in the crystal highlighting a) intermolecular hydrogen bonding ( $\text{N}2\text{H}02\cdots\text{O}2' = 2.22(3)$  Å,  $\text{N}2\text{-H}02\cdots\text{O}2' = 154(2)^\circ$  and  $\text{N}3\text{H}03\cdots\text{O}2' = 2.26(3)$  Å,  $\text{N}2\text{-H}02\cdots\text{O}2' = 165(2)^\circ$ , primed atoms correspond to  $x, \frac{1}{2}-y, \frac{1}{2}+z$ ), and b) intermolecular offset face-to-face aromatic stacking interactions involving pyridine-pyridine pairs through a centre of inversion, and pyridine-benzyl pairs through a glide plane.

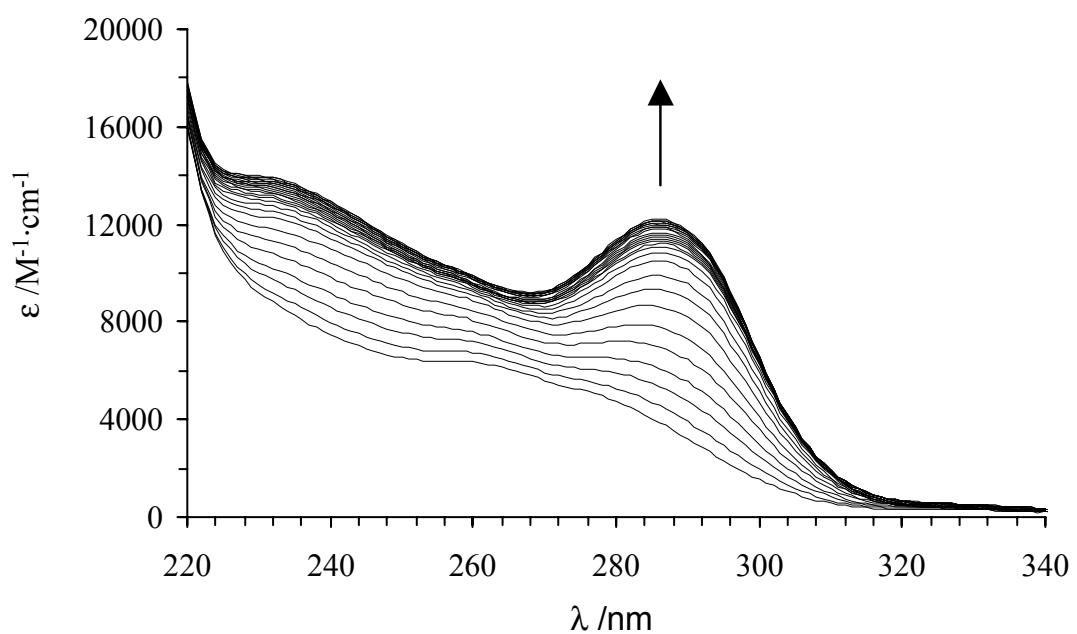

Figure S2 Variation of the absorption spectra observed for the spectrophotometric titration of **L7** ( $10^{-4}$  mol·dm<sup>-3</sup> in acetonitrile) with  $\text{Lu}(\text{CF}_3\text{SO}_3)_3 \cdot 2\text{H}_2\text{O}$  at 293 K (Lu:**L7** = 0.1-1.5).

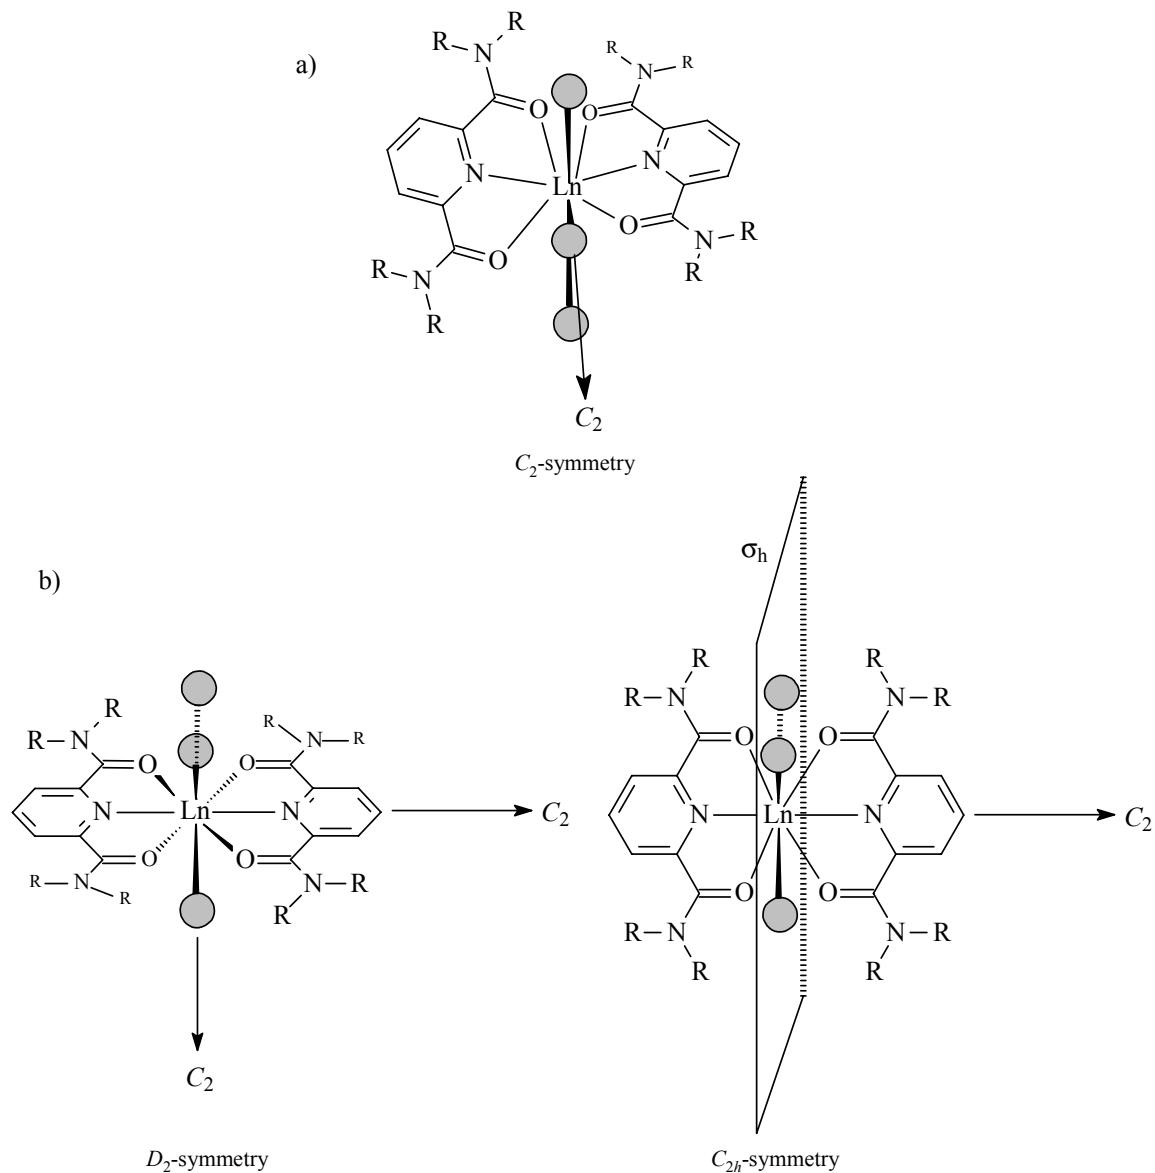

Figure S3      Dynamically-average structures observed in solution on the NMR time scale for a)  $[\text{Ln}(\text{L6})_2]^{2+}$  ( $C_2$ -symmetry: the twofold axis is located along the central Ln-solvent bond) and b)  $[\text{Ln}(\text{L7})_2]^{2+}$  ( $D_2$ -symmetry or  $C_{2h}$ -symmetry: the solvent molecules (represented with grey spheres) occupy dynamically average positions within the meridional plane).

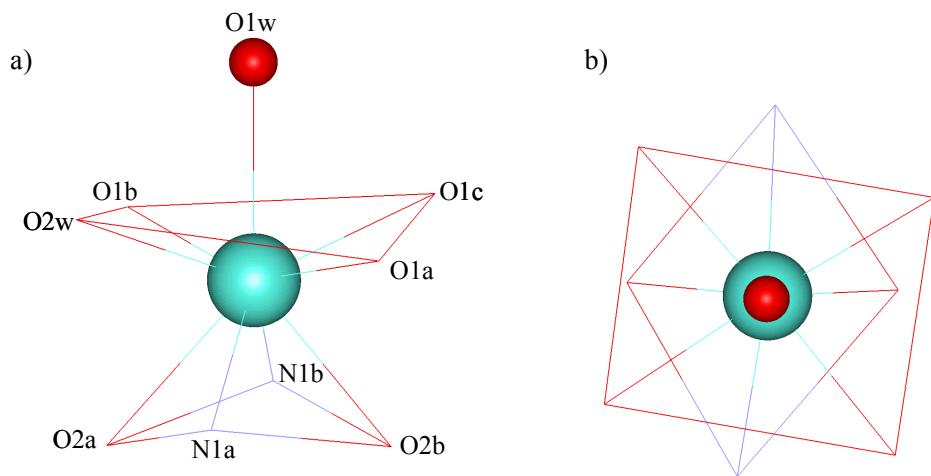

Figure S4 Perspective views of the co-ordination sphere in  $[\text{Gd}(\text{L7})_2(\text{H}_2\text{O})_2(\text{CF}_3\text{SO}_3)]^{2+}$  a) perpendicular and b) along the Gd-O1w bond, thus highlighting the distorted monocapped square antiprismatic arrangements of the nine donor atoms.

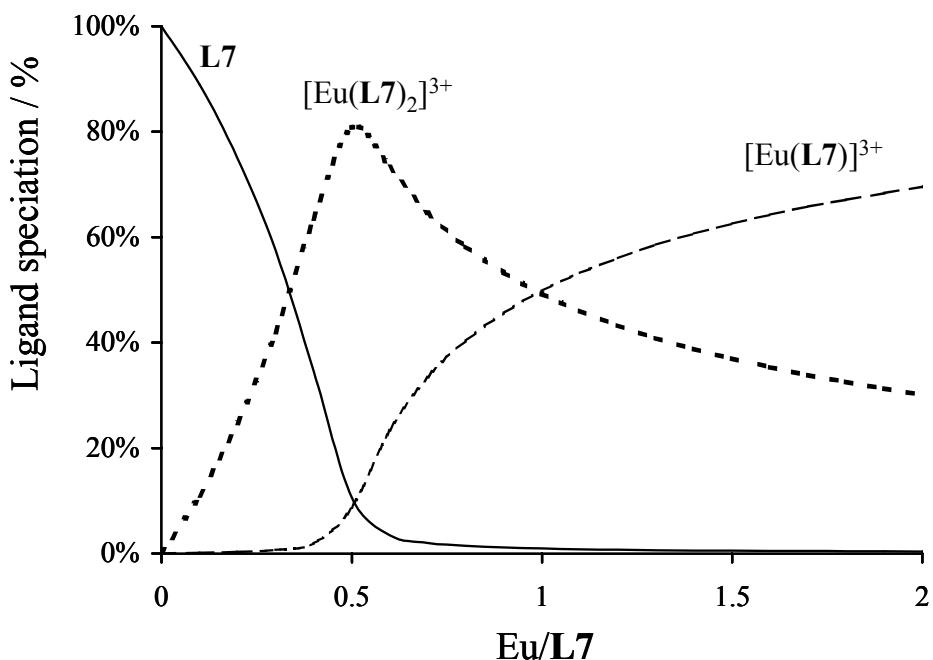

Figure S5 Distribution curves (ligand speciation) for the complexation of L7 with  $\text{Eu}(\text{CF}_3\text{SO}_3)_3 \cdot 2\text{H}_2\text{O}$  (acetonitrile, total ligand concentration:  $2 \cdot 10^{-3} \text{ mol} \cdot \text{dm}^{-3}$ ).

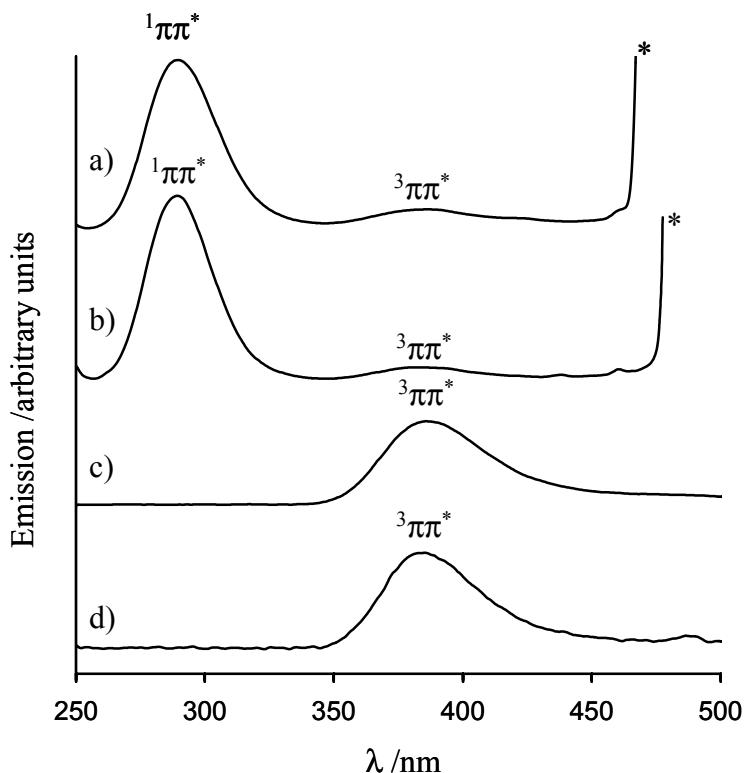

Figure S6 Fluorescence spectra of a)  $[\text{Gd}(\text{L6})_2](\text{CF}_3\text{SO}_3)_3$  (**2**,  $\lambda_{\text{exc}} = 41665 \text{ cm}^{-1}$ , 77K), b)  $[\text{Gd}(\text{L7})_2](\text{CF}_3\text{SO}_3)_3$  (**6**,  $\lambda_{\text{exc}} = 41150 \text{ cm}^{-1}$ , 77K), and time-resolved phosphorescence spectra (delay 0.1 ms) of c)  $[\text{Gd}(\text{L6})_2](\text{CF}_3\text{SO}_3)_3$  (**2**,  $\lambda_{\text{exc}} = 41665 \text{ cm}^{-1}$ , 77K) and d)  $[\text{Gd}(\text{L7})_2](\text{CF}_3\text{SO}_3)_3$  (**6**,  $\lambda_{\text{exc}} = 41150 \text{ cm}^{-1}$ , 77K). \* = Rayleigh band.

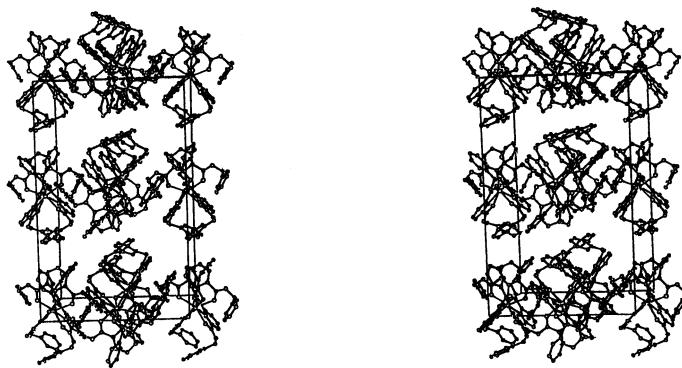

Figure S7 Stereoview of the unit cell in  $[\text{Tb}(\text{L8})_3]_2(\text{CF}_3\text{SO}_3)_6(\text{CH}_3\text{CH}_2\text{CN})_3(\text{H}_2\text{O})$  (**11**) highlighting the formation of layers parallel to the  $ac$  plane. Triflate anions and solvent molecules have been omitted for clarity.

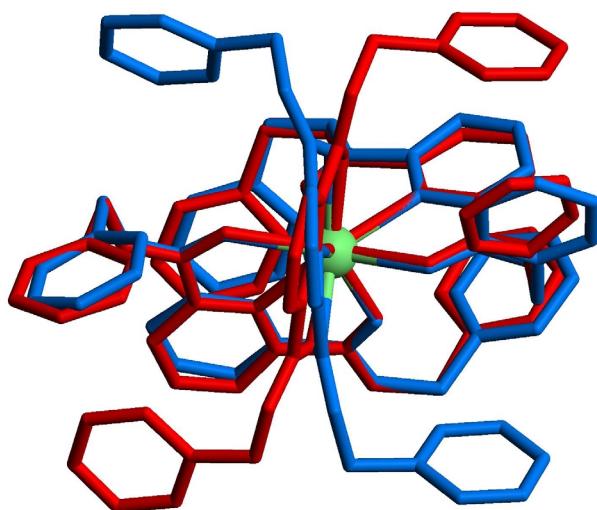

Figure S8 Superimposition of both cations of the asymmetric unit of **11** (red: **11a**; blue: inverted structure of **11b**) showing that about 85% of the atoms are related by a pseudo centre of inversion and differ essentially by the orientations of two benzyl groups.
