

Supporting Information

The effect of pyridinecarboxylate chelating groups on the stability and electronic relaxation of gadolinium complexes

Nicholas Chatterton, Christelle Gateau, Marinella Mazzanti*, Jacques Pécaut, Alain Borel, André Merbach, Lothar Helm

Table S1: X-band ($\sim 9.44 \times 10^9$ Hz) and Q-band ($\sim 3.4 \times 10^{10}$ Hz) peak-to-peak width ΔH_{pp} and central field B_c as a function of temperature for aqueous [Gd(bpeda)]K. The values were obtained by fitting one single Lorentzian derivative.

T / K	ΔH_{pp} / G	B_c / G	EPR Frequency / Hz
274.2	1234.0	3378.0	9.4434E+09
280.5	1137.4	3433.2	9.4427E+09
288.9	1059.8	3424.6	9.4384E+09
297.4	965.0	3457.0	9.4400E+09
297.4	947.6	3464.7	9.4399E+09
307.9	896.4	3475.7	9.4384E+09
316.9	854.5	3467.8	9.4397E+09
327.8	825.6	3441.4	9.4391E+09
339.7	825.5	3439.4	9.4388E+09
296.9	886.4	3470.9	9.4383E+09
297.5	90.1	12254.9	3.3980E+10
274.6	98.3	12252.9	3.3968E+10
278.6	94.2	12257.3	3.3984E+10
283.9	90.7	12256.1	3.3981E+10
289.6	89.7	12255.1	3.3978E+10
293.9	89.5	12253.7	3.3974E+10
304.6	91.5	12259.9	3.3990E+10
310.8	95.2	12256.6	3.3979E+10
319.6	101.8	12260.8	3.3978E+10
329.5	113.8	12256.2	3.3972E+10

Table S2: X-band ($\sim 9.44 \times 10^9$ Hz) and Q-band ($\sim 3.4 \times 10^{10}$ Hz) peak-to-peak width ΔH_{pp} and central field B_c as a function of temperature for the sharp component of the aqueous [Gd(bpeda)]K spectrum, obtained by fitting two Lorentzian derivatives.

T / K	ΔH_{pp} / G	B_c / G	EPR Frequency / Hz
274.2	574.4	2885.3	9.4434E+09
280.5	601.2	2923.5	9.4427E+09
