Highly Efficient Magnesium Initiators for Lactide Polymerization

Jolanta Ejfler, Michał Kobyłka, Lucjan B. Jerzykiewicz and Piotr Sobota*

Faculty of Chemistry, University of Wrocław, 14, F. Joliot-Curie, 50-383 Wrocław, Poland

Figure 1. ^1H NMR spectra (300 MHz) of L^3 ligand in benzene- d_6 (a), of compound **1** in benzene- d_6 (b), of L-LA living oligomer obtained by **1** and L-LA in toluene- d_8 (c) and purified oligomer in benzene- d_6 (d). The meanings of the distinguished signals are as follows: m – monomer, p – polymer, s – solvent, impurities are denoted by asterix.

(a)

(b)

(c)

(d)

Figure 2. ^1H NMR spectra (300 MHz) of L^2 ligand in CDCl_3 (a), of compound **2** in CDCl_3 (b), of L-LA living oligomer obtained by **2** and L-LA in toluene- d_8 (c) and purified oligomer in toluene- d_8 (d). The meanings of the distinguished signals are as follows: m – monomer, p – polymer, s – solvent, impurities are denoted by asterix.

(a)

(b)
