

Synthesis and characterization of $\{\text{Mo}_{72}\text{Fe}_{30}\}$ -coated large hexagonal gibbsite $\gamma\text{-Al}(\text{OH})_3$ platelets

Soumyajit Roy*, Hans J. D. Meeldijk, Andrei V. Petukhov, Marjan Versluijs and Fouad Soulimani

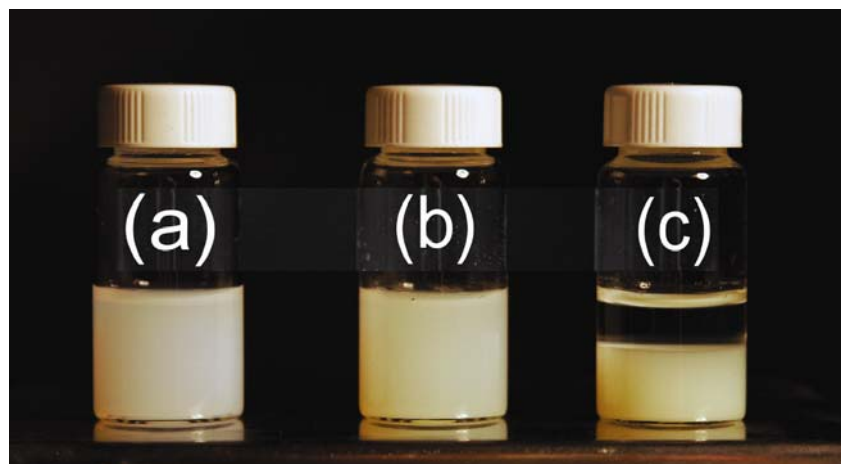

Fig. S1. Colour version of Fig. 2. (a) Starting (bluish) gibbsite dispersion; (b) changes colour (yellow) after the addition of crystals of $\{\text{Mo}_{72}\text{Fe}_{30}\}$ to the dispersion and stirring; (c) finally leading to the composite $\{\text{Mo}_{72}\text{Fe}_{30}\}$ @gibbsite as a (yellow) gel at the bottom.
