**Figure S1.** EDAX spectrum of AgI@TiO<sub>2</sub>, indicating that sample contains Ag, I, Ti, and O. Ag, I, Ti and O peaks are from the obtained AgI@TiO<sub>2</sub> nanoparticles. The Al peak is from the substrate holder, and C peak may be caused by the adsorbed carbon oxides on the sample in the air.

**Figure S2.** The absorption spectra of RhB solution before and after adsorption on the surfaces of AgI@TiO<sub>2</sub> nanocomposites.
