SQUID Magnetometry

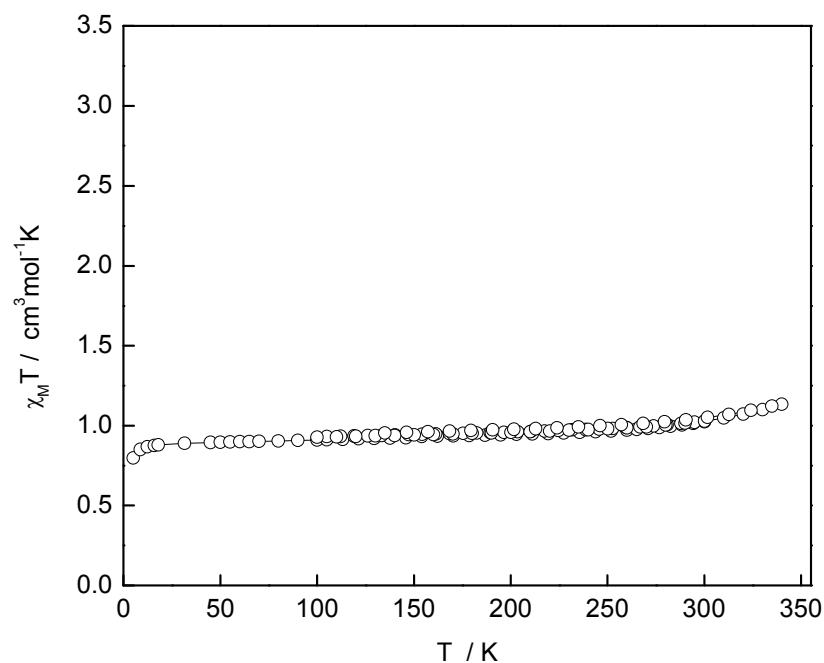

Figure S1 Thermal variation of $\chi_M T$ versus T plot for $[\text{Fe}(\text{qsal-I})_2]\text{NCS}\cdot0.25\text{CH}_2\text{Cl}_2\cdot0.5\text{MeOH}$ **4**.

¹H NMR and UV-Vis Spectroscopic Solution Studies

The ¹H NMR studies to determine the magnetic susceptibility of [Fe(qsal-X)₂]NCS were recorded at 298 K in d⁶-DMSO with TMS added as an internal standard against a reference of d⁶-DMSO with TMS added on a 300 MHz Bruker FT-NMR spectrometer following a modified Evan's method. The reference solvent was placed in a co-axial insert with the solution of the complex in a standard NMR tube. The mass susceptibility was calculated using:

$$\chi_g = \chi_0 + \frac{3\Delta\nu}{4\pi\nu_0 c}$$

where χ_0 = the mass susceptibility of DMSO ($-0.629 \times 10^{-6} \text{ cm}^3 \cdot \text{g}^{-1}$), $\Delta\nu$ (Hz) is the paramagnetic shift of the reference, ν_0 is the operating RF frequency of the NMR spectrometer (300.13×10^6 Hz) and c is the concentration of the solution in g·cm⁻³. The mass susceptibility was then converted to molar susceptibility (χ_M). Diamagnetic corrections were applied and by multiplication with the measurement temperature (298 K) $\chi_M T$ was determined.

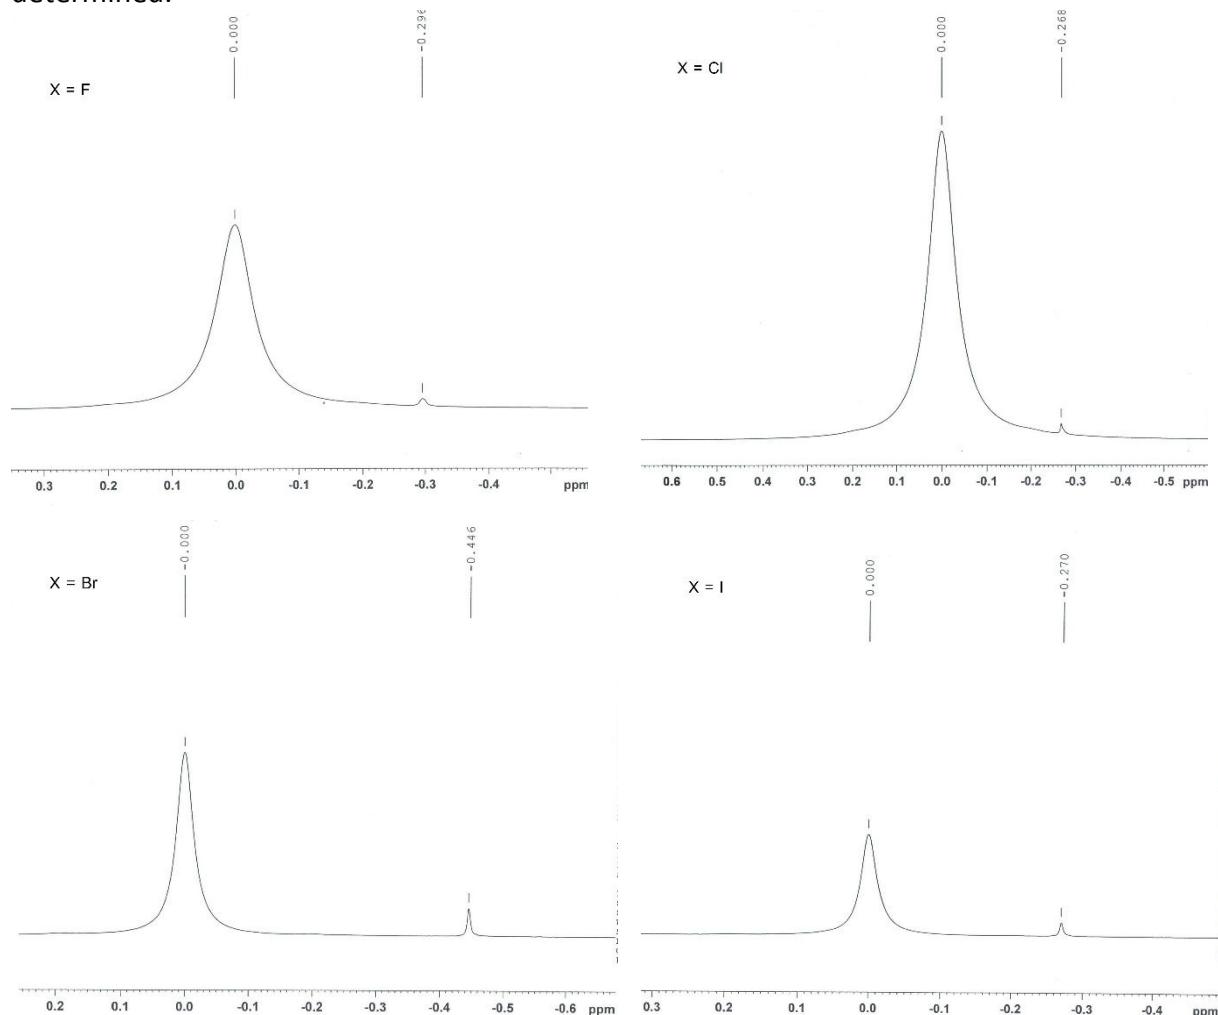

Figure S2 ¹H NMR spectrum of [Fe(qsal-X)₂]NCS in d⁶-DMSO showing the TMS shift.

Table S1 Selected ^1H NMR data of **1-4** in $\text{d}^6\text{-DMSO}$ at 298 K.

Compound	Concentration (g/cm ³)	$\Delta\nu$ (Hz)	$\chi_M T$ (cm ³ ·mol ⁻¹ ·K)	%HS
[Fe(qsal-F) ₂]NCS	0.0085	88.83	1.57	29
[Fe(qsal-Cl) ₂]NCS	0.0100	80.43	1.27	22
[Fe(qsal-Br) ₂]NCS	0.0103	133.86	2.32	49
[Fe(qsal-I) ₂]NCS	0.0093	81.04	1.73	34

Mössbauer Spectroscopy

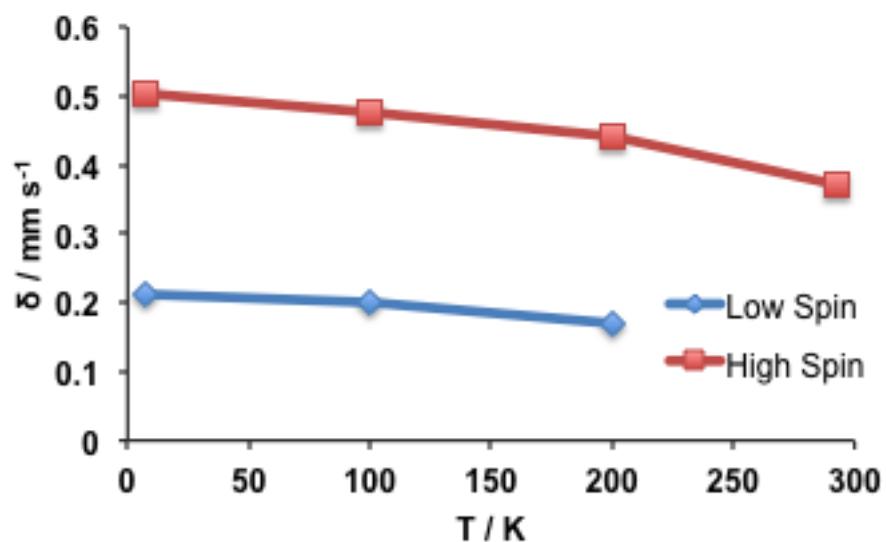

Figure S9 Decrease in isomer shift of both LS and HS **1** as the temperature is increased due to the second-order Doppler effect.

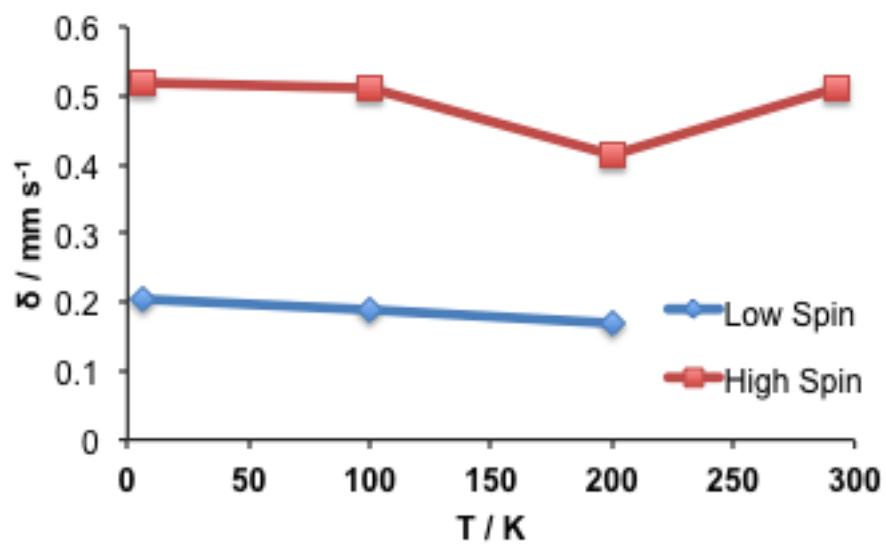

Figure S10 Temperature dependence of the isomer shift of both LS and HS **2** as the temperature is increased. Although there is a general decrease due to the second-order Doppler effect, the isomer shift of the HS species is seen to increase at higher temperatures indicating a possible structural change.
