

A Double-layered Photoanode Made of Highly Crystalline TiO_2 Nanoctahedra and Agglutinate Mesoporous TiO_2 Microspheres for High Efficiency Dye Sensitized Solar Cell

Keyou Yan,^{†,‡} Yongcai Qiu,^{†,‡} Wei Chen,[†] Zhang Min,[†] and Shihe Yang*,^{†,‡}

Electronic Supplementary Information

- Fig. S1.** XRD patterns of TiO_2 nanoctahedra and hierarchical microspheres.
- Fig. S2.** Infrared spectrum of as prepared nanoctahedra
- Fig. S3.** Pore size distribution of the TiO_2 microspheres determined by BJH adsorption.
- Fig. S4.** Photographs of the four TiO_2 films (from left to right): nanoctahedra, P25 nanoparticles, double layer, and microspheres.
- Fig. S5.** SEM image showing cracking defects of a mesoporous single layered nanoctahedra film.
