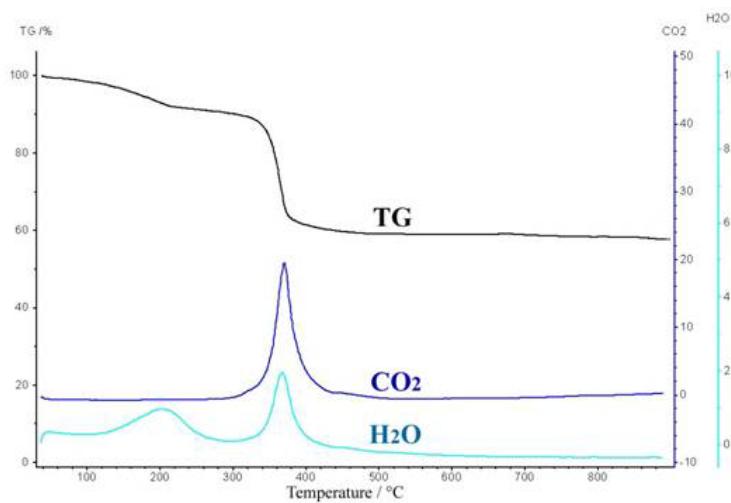

Figure S1. TG-IR curves of as-prepared sample via an acidthermal reaction at 140 °C for 12 h containing 1mL TBT and 30 mL HAc.

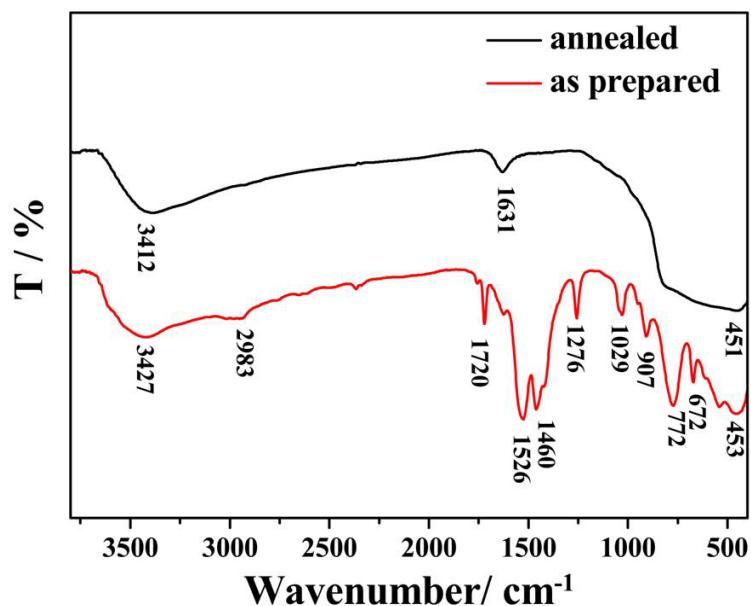

Figure S2. FTIR curves of as-prepared sample via an acidthermal reaction at 140 °C for 12 h and annealed sample at 500 °C for 3 h.

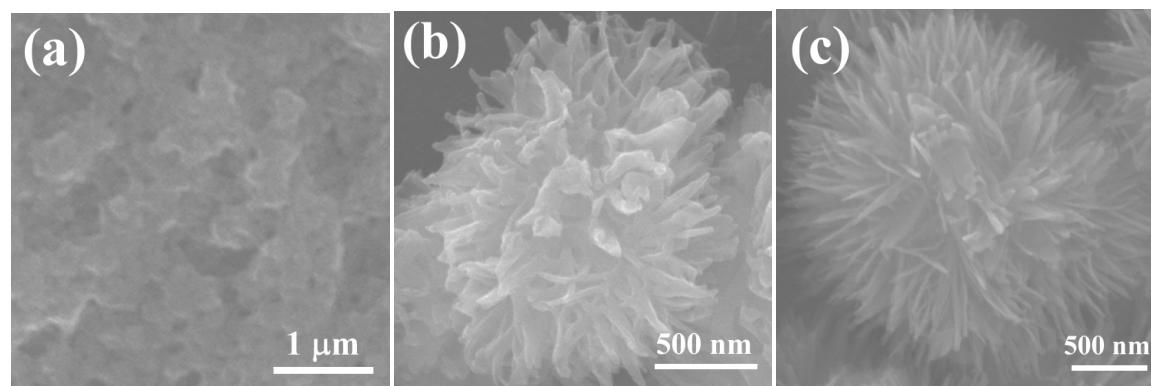

Figure S3. FE-SEM images of as-prepared materials synthesized for different reaction time 3 h (a), 6 h (b) and 12 h (c).

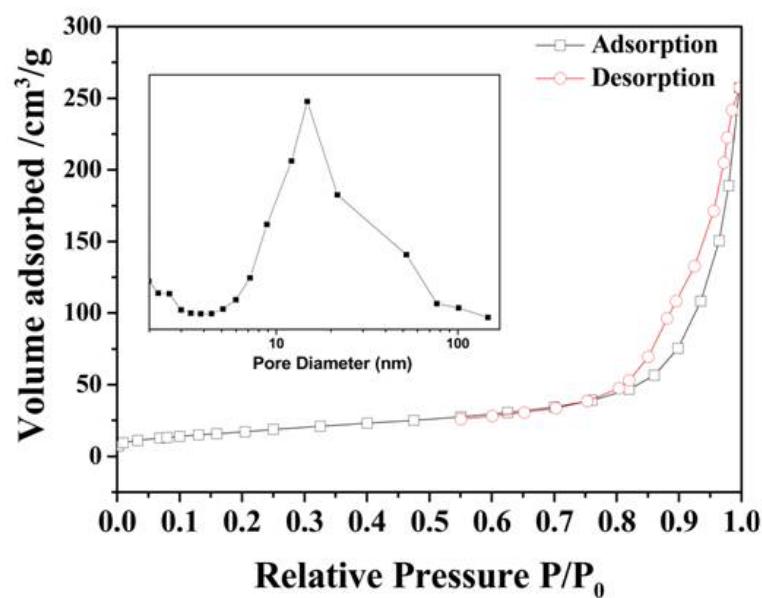

Figure S4. Nitrogen sorption isotherms of the calcined hierarchical TiO_2 spheres. The inset shows the pore diameter distribution of annealed hierarchical TiO_2 spheres.

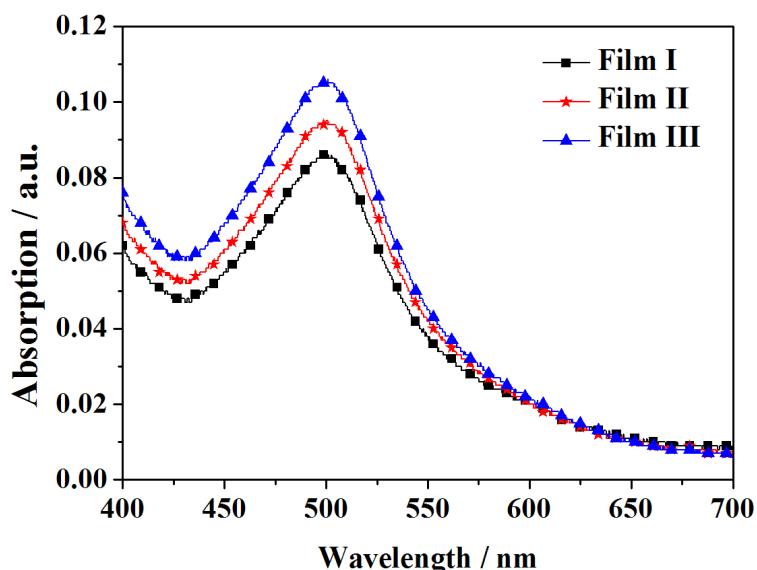

Figure S5. The UV-vis absorption spectra of solution containing dye molecules detached from the three films in 3.0 mL H₂O containing 0.1 M NaOH.

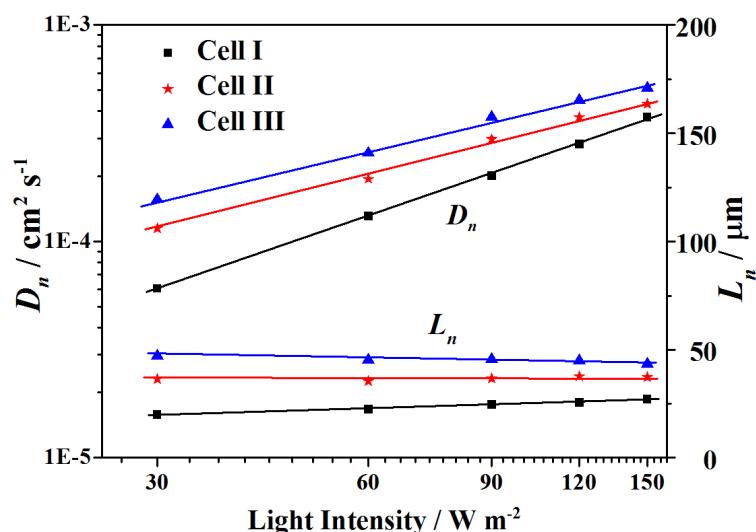

Figure S6. Incident light intensity dependent electron diffusion coefficient and effective diffusion length for DSSCs based on film I, II and III at 457 nm LED illumination.
