The relative ionic abundance for each ion is reported in round brackets. The ions in square brackets were fragmented in MS³ experiments.

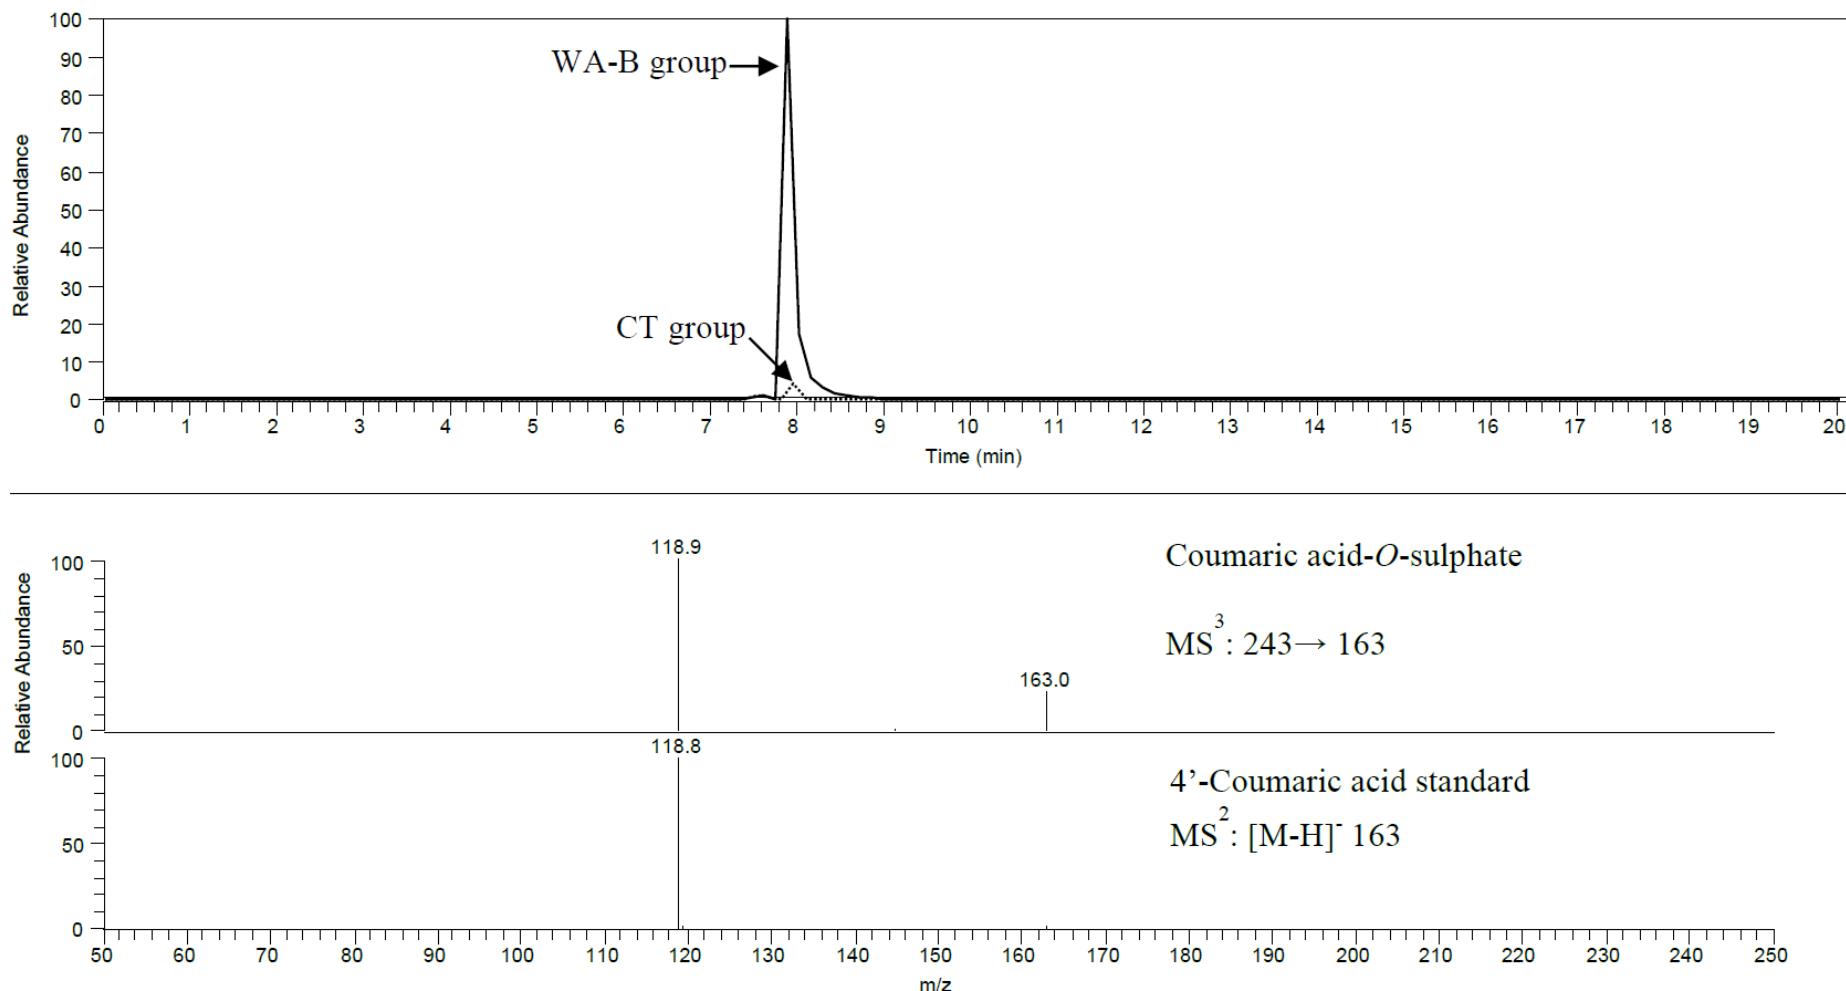

Supplemental Figure 1. Comparison of chromatographic traces of ferulic acid-4'-*O*-sulphate in WA-B group and CT group and comparison of MS³ ion spectrum of the same urinary compound with those of corresponding standard.

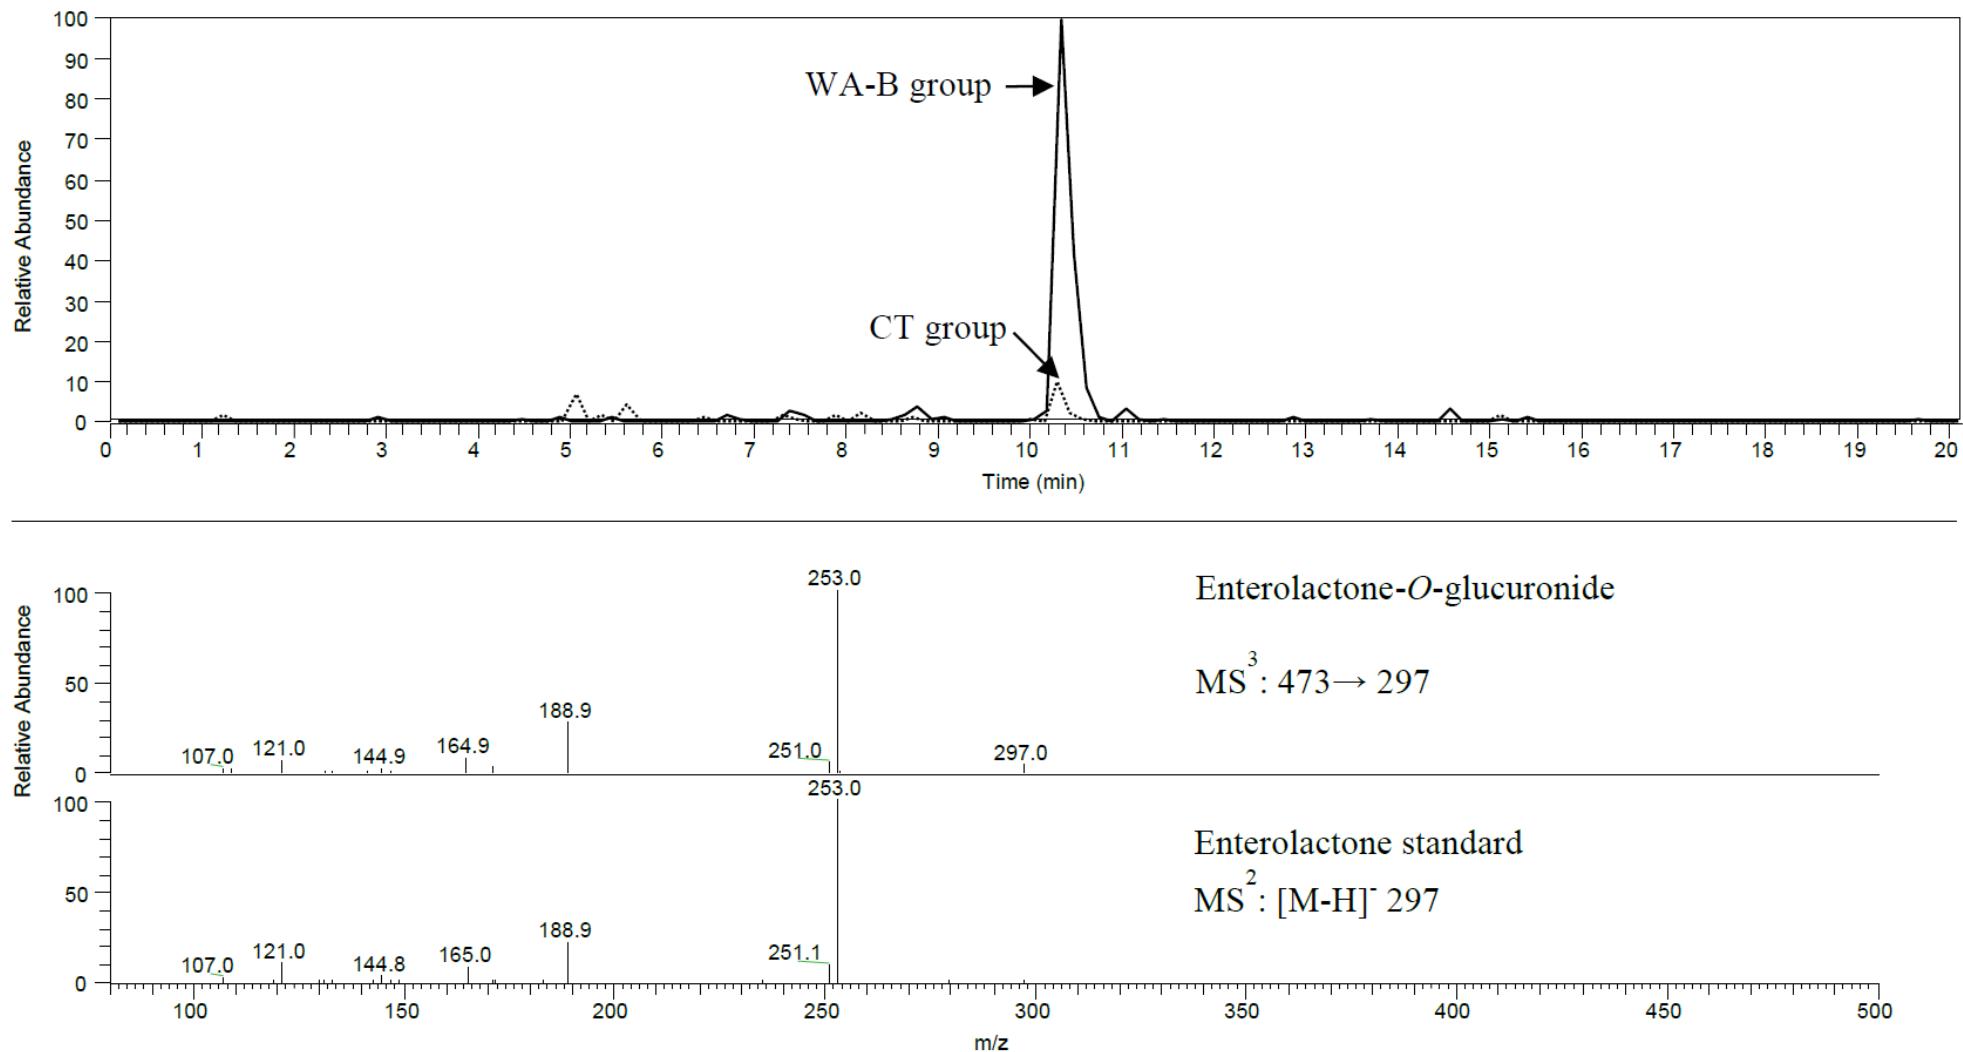

Supplemental Figure 2. Comparison of chromatographic traces of 3-(phenyl)propionic acid-*O*-sulphate in WA-B group and CT group and comparison of MS³ ion spectrum of the same urinary compound with MS² ion spectrum of 3'-hydroxyphenylpropionic acid standard.

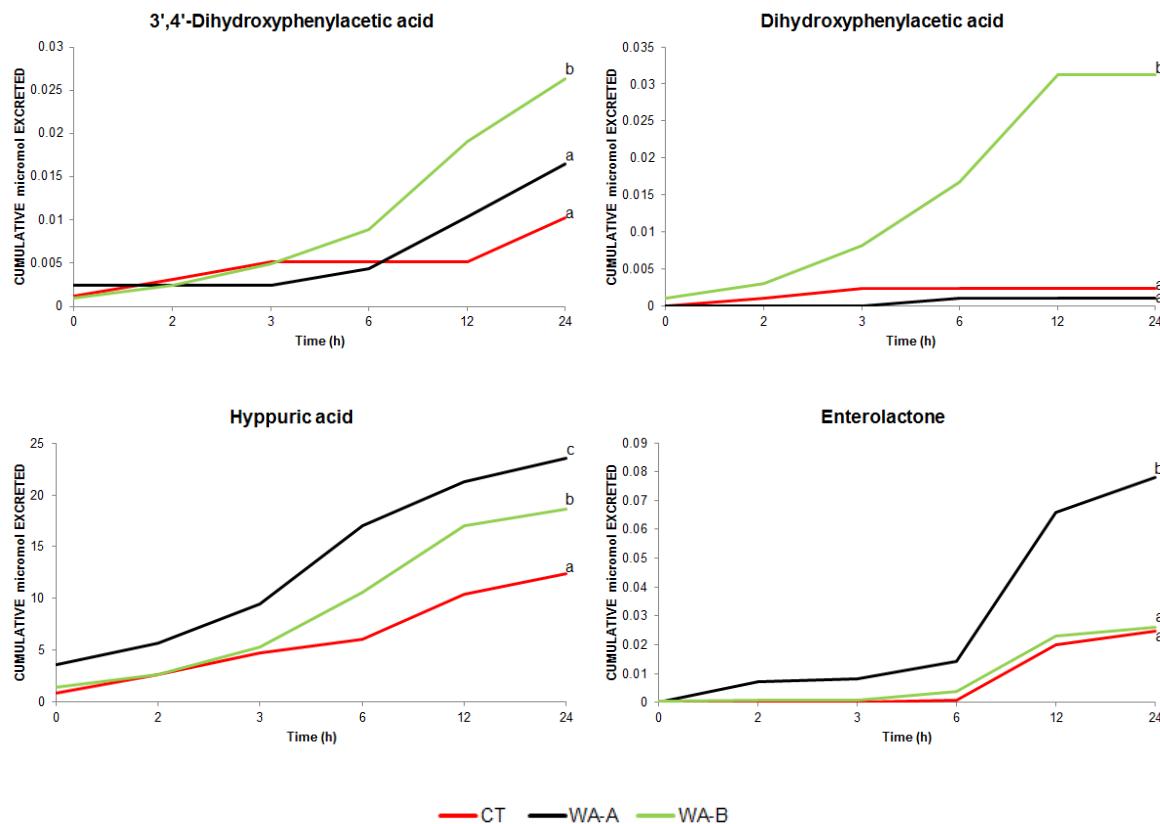

Supplemental Figure 3. Comparison of chromatographic traces of coumaric acid-*O*-sulphate in WA-B group and CT group and comparison of MS³ ion spectrum of the same urinary compound with MS² ion spectrum of 4'-coumaric acid standard.

Supplemental Figure 4. Comparison of chromatographic traces of enterolactone-*O*-glucuronide in WA-B group and CT group and comparison of MS³ ion spectrum of the same urinary compound with MS² ion spectrum of enterolactone standard.

Supplemental Figure 5. Cumulative urinary excretion of some phenolic metabolites in the acute feeding. CT: control group. WA-A: wheat aleurone A group. WA-B: wheat aleurone B group. Data are expressed as mean values of μmol excreted, with $n=4$ for each group. Letters are included for values significantly different among groups ($p<0.05$).

Supplemental figure 6. Excretion in the 24 h-urine of some phenolic metabolites in the chronic feeding. CT: control group. WA-A: wheat aleurone A group. WA-B: wheat aleurone B group. Data are expressed as mean values of $\mu\text{mol} \pm \text{SEM}$, with $n=6$ for each group. Letters are included for values significantly different among groups ($p<0.05$).
