**Supplemental Figure 1.** Chemical structure of fisetin (3,7,3',4'-tetrahydroxyflavone).

**Supplemental Figure 2.** The cell viability of PC12 cells cultured in a hypoxia incubator. The PC12 cells were cultured under normoxia or in a hypoxia incubator for 24 h or 48 h. The cell viability was measured with the MTT assay. The data represent the mean  $\pm$  SD of three independent experiments. ##p<0.01 represents significant differences compared with cells cultured under normoxia.
