Experimental

Materials and methods

Chalcones were prepared by earlier reported procedures. Other reagents were from commercial sources. The HSBM experiments were conducted in a planetary-centrifugal mill AGO-2 (acceleration: 60 g; volume of one drum: 35mL³; diameter of steel balls: 5 mm; weight of balls: 75 g). Melting points (mp) were recorded on a WRS-1B digital melting point apparatus and uncorrected. Infrared spectra were recorded on a Thermo Nicolet Avatar 370 spectrophotometer. ¹H NMR and ¹³C NMR spectra were obtained on a Varian Mercury plus-400 spectrometer using CDCl₃ as the solvent with TMS as the internal standard. Mass spectra were measured with a Finnigan Trace DSQ spectrometer.
