**Table S1.** List of the studied 250 chemicals. For each compound reported here are given: ID number, CAS number, experimental (in bold) or predicted log BCF, Log(1/LC50)96h and extrapolated GHLI values (15, 19-21), PC1 scores from PCA-A and PCA-B (PCA-B scores are reported as Experimental (Exp. PBT INDEX) to distinguish them from values predicted by Equation 1), values for the descriptors included in Equation 1, experimental PBT Index values calculated by PCA (PCA-B), values of the PBT Index predicted by Equation 1, hat values for the Applicability Domain of Equation 1 (\*\* = out of the AD), PBT category derived from cut off values proposed in this paper (PBT Index cat.) and from US EPA PBT Profiler (PBT US EPA cat.). The last two columns of Table 1 were used in this paper to compare the PBT Index and the US EPA PBT Profiler.

<sup>a</sup> To simplify the categorization originally proposed by US EPA PBT Profiler chemicals were assigned to: cat. 3 = three criteria were exceeded, cat 2 = two out three criteria were exceeded, cat. 1 = one or none criterion were exceeded. If one of the properties was not evaluated by the US EPA PBT Profiler, it was accounted as if the criterion for that property was exceeded.

**Table S2.** PBT screening performed for 45 compounds from DSL list.

a: compounds with unhomogeneous screening are marked as (\*)

b: 3 = all P, B, and T criteria exceeded; 2 = 2 out of 3 criteria exceeded; 1= 1 or 0 criteria exceeded. If one of the properties was not evaluated by the model, it was accounted as if the criterion for that property was exceeded .
