## Experimental section

### General methods

All reactions were performed at room temperature and the chemicals used in the reactions were not dried. Analytical thin-layer chromatography was performed with E. Merck silica gel 60F glass plates and flash chromatography used E. Merck silica gel 60 (230–400 mesh). MS were measured using a JEOL JMS-HX110 spectrometer. <sup>1</sup>H and <sup>13</sup>C NMR spectra were recorded with a Bruker Avance EX 400 instrument. All substrates were prepared using previously reported procedures.<sup>1,2</sup>
